Mitra was in the Dane County Wisconson jail as of Friday November 14th. He has been tentatively charged with 16 felony counts of computer crimes and could also face federal charges, according to Madison police.

For the Amateur Radio newsline, I'm Bruce Tennant, K6PZW, reporting.

--

Authorities hope that Mitra's arrest will end months of frustrating interference to their radio communications system. The complete story is on-line at http://www.madison.com/wisconsinstatejournal/local/61321.php (Wisconsin State Journal, QRZ.com, others)

**

ENFORCEMENT: SKYWARN INTERFERENCE

The FCC has told an Indiana ham that he is to stay off of a 2 meter repeater dedicated to emergency alerting operations. This, in a letter to Christopher Smith, KC9CAU, of South Bend.

In the note, the agency says that it has received a complaint about Smith's on the air operation on a repeater system participating in the St. Joseph County Skywarn system. The complaint alleges deliberate interference and harassment to the repeater and refusal to refrain from attempting communications on that system.

The FCC's letter tells Smith that it expects him to abide by any demand that he stay off the repeater, as well as any other repeater where such request is made by a repeater control operator or the system licensee. Smith was given the customary 20 days from the date of the FCC's letter to reply. (FCC)

**

ENFORCEMENT: ECHOLINK EXPLANATION SOUGHT

A Florida ham has some explaining to do for comments made over a linked repeater system. The FCC's Daryl Duckworth, NN0W, explains:

--

Duckworth: "An inquiry went to WA3QCV, Timothy Horvath, of Flagler Beeach, Florida, concerning operation on two repeaters: WB2IXR at 157.015 Mhz and KG4IDD at 145.47 Mhz that are linked through the Echolink system. The inquiry involves alleged threats and obscene language."

--

The FCC also gave Horvath 20 days from the date of its letter for him to respond. (FCC)

**

RADIO LAW: ANTI-PIRACT BROADCAST FLAG APPROVED

The government has approved a new anti-piracy system that will theoretically make it harder for computer users to illegally distribute digital TV programs on the Internet. This, with the goal is to speed the transition to higher quality digital broadcasts and ensure such programming remains free.

The five-member FCC voted unanimously to allow a "broadcast flag" to be added to digital programming to block broader distribution on the Internet on November 4th. Broadcasters and the movie industry had urged the Federal Communications Commission to take such action, while consumer groups said it will force some people to purchase new electronics. (FCC, others)

**

ON THE MOVE: HF NET RELOCATING TO IRLP

Call it a sign of the times we live in. This as Tom Mc Glinn, KO6HA, reports over QRZ.com website on big change for a long established high frequency net that's taking to a different way to communicate.

Mc Glinn says that due to the urban lifestyle of many of the members of the USS Hornet Amateur Radio Club, the group has decided to move its weekly Net from 80 Meters to repeaters that are interconnected using I-R-L-P. That's the Internet Radio Linking Project which permits the world wide interconnecting of repeaters over the World Wide Web.

According to Mc Glinn, the net has been conducting tests and they have worked out most of the bugs involved with such a move. Once completed, the U-S-S Hornet Net will hold the weekly gathering in the San Francisco Bay Area using the facilities of the 147.210 repeater in near-by Oakland. Those outside the area we will be linked in using the I-R-L-P

Western Reflector.

Mc Glinn adds that anyone on the planet who has I-R-L-P access to link to the Western Reflector Subchannel 1, node 9251, on Mondays at 2030 Pacific time is invited to check in on the Net. He says that you do not need to be a member of the club to take part. (QRZ.com)

**

CONFERENCES: CSVHFS IN ONTARIO CANADA NEXT JULY

The Ontario VHF Association and the Toronto VHF Society will be hosting the 38th annual Central States VHF Society Conference. The dates are July 22nd to the 25th at the Delta Meadowvale Resort and Conference Center in Mississauga, Ontario, Canada.

2004 marks only the second time that this conference has been held outside of the USA. More information and a registration form will be available shortly in cyberspace at www.csvhfs.org and www.ovhfa.com (VHF REflector)

HAMVENTION 2004: AWARD NOMINATING PERIOD OPENS

Meantime, the planners of Hamvention 2004 say that the nominating period is now open for its Radio Amateur of the Year, Technical Excellence and Special Achievement awards program. The Radio Amateur of the Year is described as that special person who has made a long term commitment to the advancement of amateur radio. A well-rounded individual who has contributed most of his or her lifetime to our hobby in some very outstanding way.

A nominee for the Technical Excellence award should be a person who has made an outstanding technical advancement in the field of amateur radio. Something like a revolutionary new equipment design or mode of operation that has impacted positively on the day to day operation of many hams.

Last but by no means least, a nominee for the Hamvention's Special Achievement is the kind of special person who has made an outstanding contribution to the advancement of amateur radio. This award is usually given to a respected amateur who spearheaded a single significant project.

Documentation is beneficial. Magazine articles, newsletters, newspaper clippings, videos, etc. will better inform the Awards Committee of your candidate's accomplishments. All materials become the property of the Hamvention and cannot be returned.

The nomination deadline is January 31 2004. You can fill out the on-line form found at www.hamvention.org by clicking your mouse on the words award nominations. Printed nominations go to the Awards Committee, Hamvention 2004, PO Box 964, Dayton Ohio, 45401.

And oh yes. The deadline for all submissions is January 31st, 2004 (Dayton Hamvention)

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

NAMES IN THE NEWS: KB2GSD VS. WJMK - PART 2

A follow up to an earlier story involving retired CBS newsman Walter Cronkite, KB2GSD, and a Florida television production company that he says misled him and tarnished his reputation. This, when it persuaded him to appear in videos that promoted prescription drugs and other products.

The company, WJMK, filed suit last September after Cronkite tried to end a contract he had signed to appear as the host of a series of videos, including some called American Medical Review. In their legal brief responding to the WJMK action, Cronkite's lawyers say WJMK had assured him that the videos would be educational and would not promote corporate products. These are claims that his lawyers say Cronkite subsequently learned were false.

An attorney representing W-J-M-K, says that Cronkite's charges had no merit and that Cronkite's lawyers were trying to disparage the other side in the media. Meantime, KB2GSD has filed a counter claim seeking $25 million in damages from WJMK. (Published news reports)

**

NAMES IN THE NEWS: LONG TO AMSAT JOURNAL

Ed Long, WA4SWJ, is the new Editor in Chief of the AMSAT Journal. A licensed amateur since 1970, Ed holds a BSEE from West Virginia University and an MBA from Duke. He is currently employed by SPX Process Equipment in Delavan, Wisconsin. He can be reached by e-mail to wa4swj@amsat.org (AMSAT-NA)

**

EMERGING TECHNOLOGY: SAFETYCAST BROADCAST TO YOUR CAR

Police or fire engines may soon be able to override the radio in your car. This, as Jacksonville Florida based SafetyCast announces that it will soon test a new mobile alert system. One that will allow a police officer or ambulance driver to take over a car radio within a distance of about 1000 feet and broadcast a brief alert tone and warning message.

Emergency services officials are praising the development. They claim that there is a warning crisis because motorists in today's sound-proofed vehicles can't hear sirens, or just aren't paying attention.

But the CGC Communicator reports hearing from one engineer who's worried about the Special Temporary Authority the FCC gave for the trial. He says his studios and E-A-S receivers are located 100 feet from a highway and one block from a hospital. He feels that SafetyCast might jam an Emergency Alert System messages that are coming in. (CGC Communicator)

**

SPACE: FRENCH AND RUSSIAN LAUNCH ACCORD

France and Russia approved an accord intended to pave the way for the eventual launch of Russian rockets from a French launch pad in South America. The agreement, signed on November 11th is the first of its kind between Russia and a European Union country and is a step toward the launch of Russian Soyuz-ST rockets from the E-S-A Kourou launch pad in French Guyana. Most ham radio satellites are orbited from the Kourou facility. (Published reports)

**

INTERNATIONAL - HOLLAND: RADIO NETHERLANDS BROADCAST CHANGE

Radio Netherlands says that its shifting the frequency of its Dutch language transmission to the Far East, East and Southeast Asia at 1300 U-T-C. This broadcast can now be heard on 7 point 380 MHz. The reason for the change is to avoid interference to the transmission. (Media Network)

**

DX

In D-X, word that ON4LAC, is active portable 3B8 from Marutius through November 23rd. His activity has been mainly on 20 and 15 meters using SSB and PSK, but is expected to be on RTTY as well. He will leave Msrutius and head to Reunion Island to be active as FR5 stroke ON4LAC during the period of November 26th and December 15th. After this activity, he will head back to Mauritius and will be active again between December 17th and 27th. QSL direct to his home callsign. (OPDX)

Also, K5LB has announced that he will be going to Swaziland next March and is looking for several operators to tag along. His plans include a trip through the Kruger Game Park. If interested, contact him at frosty1@pdq.net (OPDX)

**

THAT FINAL ITEM: VOLUNTEERISM AND THE NYC MARATHON

For the last two weeks New York City Marathon Communications Coordinator Steve Mendelsohn, W2ML, has been sharing with us the behind the scenes

story of how 411 hams move the race along. In our final part in this series Henry Feinberg, K2SSQ, takes a look at the volunteers that make it all hapen:

--

The ham radio communications effort for the New York City Marathon is volunteer driven. And, as with any event, volunteers do come and go. We asked the lead volunteer, Steve Merndelsohn, W2ML, to explain how this situation gets covered:

--
Audio only. Hear the newscast in mp3 at www.arnewsline.org
--

It's primerally the local clubs that supply the volunteer ham radio communicators. W2ML says that he has a special way of introducing them to what Marathon communications is all about:

--
Audio only. Hear the newscast in mp3 at www.arnewsline.org
--

And speaking about volunteers, we asked Steve what about his own role in all this. How much of his life does he devote to setting up this all volunteer communications effort? His answer may astound you:

--
Audio only. Hear the newscast in mp3 at www.arnewsline.org
--

And there you have it. An insiders look at the massive all volunteer ham radio communications network that literally runs the New York City Marathon. It's a view that only someone who has been there every year since Amateur Radio has been involved, can give.

For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ

--

Our thanks to Steve Mendelsohn, W2ML, for sharing his experiences with us, and with you.

**

NEWSCAST CLOSE

That's all very nice and dramatic but this was the United States
Coast Guard, right? The same USCG that gave you food, lodging,
shelter, and free clothes that you could wet in as needed? The
same USCG that taught you morse code cognition? It wasn't
amateur radio, was it?

Jeff, the time for demanding Medals for Meritorious Service in
the USCG is past for you. That was not amateur radio, it was
PROFESSIONAL radio. You were paid for what you did (in
several ways). It was your JOB. I'm sure that the USCG did
not put you on watch if you couldn't cut it. I don't see how
all that makes you some Number One Ichiban HAM Honcho
NOW.

>HF CW too much for you? Okay, sit the evening MF CW watch, instead.
>500 kHz in the left phone, 499 in the right (even you're bright enough

>That's where the log entry ends.

Transmitters don't "scream" Jeff. They are inanimate things that
run on electricity. When the radio room on that unfortunate ship
flooded, many things could have temporarily put the transmitter
on full Continuous Wave and also to shift frequency slightly.
The "scream" you heard, if it was not in your head alone, could
have been a true CW with a frequency shift just enough to make
it sound something like a "scream."

>Now sit there, Jim, and try your best to comprehend that the man
>you were just in QSO with has drowned; he was one of the last men
>aboard the ship -- most of the others had taken to lifeboats.

You were safe on shore, listening to a radio...provided by the
USCG, the same military service that provided you with food,
lodging, shelter, clothes (to wet in), and a modest monetary
stipend each month for your JOB. I'll bet you even got Rank
with that USCG service.

Meanwhile, in time NOW, the last officer in charge has only
to start the GMDSS...which will send distress call AND the
position of the sinking ship. As accurate as possible without
having to wet pants or make some heroic, dramatic act out
of it. No "screaming" transmitters.

>Maybe the voice position is more to your level of ability. Now don't
>be overwhelmed -- you'll have to listen to about 30 voice channels:
>2182 kHz, 2670 kHz, the 4, 6, 8, 12, 16, and 22 high seas maritime

>radios and singing to each other; but don't touch that volume control --
>you'll have to listen to their singing all night long.
>
>What was your comment again?

...you knew the job was dangerous when you took it...

As I said, the time for Medals For Meritorious Radio Service in
the USCG is past for you, Jeff. You were safe on shore, no
lifeboats needed, and, when your watch was over, you could
go off duty, hit the bunk, or chow down on USCG food after
changing your pants.

>>Yeah, Jeff. But you're different. You talk the talk, but you don't
>>walk the walk......
>>73, Jim KH2D
>
>You're right, Jim, I didn't walk any walk; I ran a marathon each
>shift, a marathon that would have left you exhausted at the *starting*
>line.

Thank you Superham, once more you've saved Metropolis.

Of course, if you want some "comparisons," you can always
hang around a TRACON sometime at a busy Center if
radio "marathons" are your cuppa. Plenty "runners" in that

radio "marathon," a whole room full plus lots in the sky,
all doing things on voice. If there be "screams," then
they can be heard on cockpit voice recorders.

>Enjoy your little walk, Jim. And change your wet pants.
>
>Jeff KH6O

Jeff, you've never been under Incoming, have you? While
trying to get return artillery support on a radio while your
ears, your whole body is numbed by HE infall on your
position? Most folks in that position don't wet their
pants...every sphincter tightens up, ears go deaf, eyes
close tight, and every breath may be the last.

I just helped plant my bro-in-law, another veteran.
Why don't you quit the shore station histrionics and go
back to ancient radio history. It will ease your troubled
mind...and keep your pants dry.

Alun, if this were a religeous issue I'd be trying to convince you that all real hams must use the code. I'm not trying to convince anybody of anything. I'm merely stating my beliefs re. the retention of the 5-wpm Morse code exam a.k.a. Element 1 for HF privies.

> , so I won't be able to convince you
> otherwise.

Two years ago, I made a decision to get my AR license. I'd heard some rumblings of a code vs. no-code debate, but I didn't care. I wanted my ticket. I had precious little spare time between a new house, a newborn child, (Our second.) and a promotion at the job along with the increased responsibilities, but I didn't care. I wanted my ticket. My XYL also needed help (read: "free labor") getting her business off the ground and that ate up spare time as well, but I didn't care. I wanted my ticket.

See a recurring theme? I wanted my ticket.
1. Research the requirements.
2. Meet said requirements.
3. Enjoy the privileges that come from meeting said requirements.

I decided that I'd get up early each day and spend 15 to 20 mins. practicing with the ARRL code CD's. Additionally, I managed to sneak in an evening or two before turning in. It never occured to me that someone was oppressing me by forcing me to do this. I viewed it as an investment in bettering myself. All because...yep, you guessed it, I wanted my ticket.

So no, Alun. You will NEVER convince me that 5-wpm Morse code test is a "barrier" to anyone. 13-wpm? Maybe 20-wpm? Yeah, very likely. However, 5-wpm just isn't. Not because I (or anybody else) say(s) so, just because it isn't. Ask a Handi-Ham. Now there's an example of "motivated" individuals.

> If you look me up you'll see I'm an Extra, and you'll be able to figure
> out that I passed 20 wpm.

Congratulations, that's a significant accomplishment.

> What you won't see, is that I've been a ham
> since 1980, not 1992, as I'm not originally from this country.

I kinda picked up on that from your website. Nice job, BTW.

> However, ham radio is not a job or a vocation, just a hobby.

So? Some would disagree, but let's proceed on the premise that it's only a hobby. (We'll ignore the service aspect.) Why sould we lower the standards for our hobby?

> I welcome the
> unmotivated as much as I would welcome anyone else.

Why on Earth would one want to welcome the unmotivated? How many other aspects of AR can we apply the "don't get in the way of my fun" mindset? How about rules and regs, or gentleman's agreements re. voluntary bandplans, or how 'bout them writtens? Why should I demonstrate knowledge of digital modes when I'm only interested in running SSB?

> Why shouldn't they
> have fun too?

No one's preventing anybody from having fun. Ex. An AR lives in an antenna resticted apartment and laments how his/her options are limited. I'd hang a retractable wire from the window at night, run a counterpoise, and operate 40m CW QRP via a tuner in a heartbeat...all for about $200, less than many dual-bander V/UHF h/t's. You know how 40 is at night, yes? So where's the real limiting factor? Um hmm.

> If someone wants HF and doesn't want to learn code, why
> should they bother to study for a VHF and above licence, when they could
> be scuba diving or building model railroads or what have you? (Not hobbies

The US legal system may not be perfect, but it's a whole lot better than anywhere else I'd rather *not* be for legal matters. In some of those cases you mention above, I am not so certain there weren't reasons (inside reasons we'll never know about) for the things happening the way they did.

My point is that in this country, one is innocent until proven guilty. That is, *unless* we don't believe in the legal system at all--and we cannot pick and choose when we decide to do that. We either believe in it or we don't. Period. I do. So, the price we pay for that--and, again, I think it's a whole lot better than anywhere else--is that we must endure as people go free that we, as non-participants in that person's legal matters, may feel are not innocent.

It's just like being a Public Defender. There may be times when people who are just as guilty as all get out. But, if they were "victims" of processes--which we all, by the way, have a part in by our voting privileges in this country--that were not followed correctly and to the tee, then I hope the Public Defender is a darned good one. Why? Because if I am ever wrongly accused or unjustly brought to our legal system, I want the Public Defenders to be able to "get me off."

Inherrently, people decisions can and will go wrong. That is also why I don't believe in the death penalty. Our legal system is "supposed" to be such that when someone walks outside those courtroom doors, they are on the same level as the rest of us--having been judged by their peers. We *have* to believe in and, more importantly, support that or our legal system is a mockery.

Larry, you're an ass, as usual. For anyone but those who *choose* to be miserable, such as yourself--it is quite understood that the loss of human life is a tragedy. And, for anyone with even half a brain, *not* such as yourself--it is a given that I would not express such assinine thoughts as that the death of someone--*anyone* I might add--is hilarious.

Go ahead, though, keep being miserable.

Oh, and by the way, Dwight. In the event that you would be (and I don't think you would) as childish as Larry, *if* you took the above to think that I was including the story of your brother in my "hilarious" comment, then you would be wrong; however I apologize to you if I implied that.

Sure - because a house is something you need anyway, it's insured and not likely to wind up obsolete or useless in a few years. Most of all, almost no one can afford to buy a house for cash.

Exactly - it's all in the numbers for your particular situation.

The biggest financial boo-boos people make are:

- confusing "wants" and "needs" (you may need a car, but you want a new SUV)
- not having a budget, or not having one based on real data
- looking at their income out-of-context and saying "I can afford X" without doing the numbers.

I guess it depends where you are at, Kim. In this neck of the woods,
there has been a HUGE amount of press and talk about the abusive
priests. Just about every radio and TV station, multiple daily newspaper
stories. couldn't get away from it if you tried. It has slowed a bit
now, as the issue is in a interim stage. But you can count on 10-20
stories per week.

If you look at the total dollars spent, you can still pay less money on
some of the higher interest lower cost loans than lower interest higher
priced loans. (although I'd never suggest doing that) It's just the
sheer amount of dollars. So the best bet is to pay all the loans off as
quickly as possible.

Don't forget succumbing to the credit card problem. It's soooo easy to
live life large when you have 10 credit cards with a 20 thousand liimit
on each card.

One of those nifty little life secrets I've found out is that if you
are willing to avoid spending credit money like a drunken sailor while
you are young, you will have much more money for your toys when you get
older.

You've never heard the term, Hans? since you took the time to write
this, I'll elaborate:

Sailors on leave have been known to be avery exciting bunch for years.
They spend a lot of their lives at sea, and when they get to land often
have a fair amount of discretionary cash to spend, and a lot of steam to
work off. So sailors often spend their money at an alarming pace, thus
the phrase.

And where did I refere to the Navy? A sailor is a generic term for:

1. One who serves in a navy or works on a ship.
2. One who travels by water.
3. A low-crowned straw hat with a flat top and flat brim.

It wasn't number three, so it was numbers one and two.

> Or do you even have a clue, Mike?

Proudly serving my Navy and country since 1976.....

I disagree. Govt. has a legitimate role in making sure products are reasonably safe and that claims made for them are not false.

But providing information isn't the same thing as "protecting consumers" from every imaginable hazard.

>I
>certainly don't want MY taxes to go for the checks on goods and information

>
Remember what cars were like when we were kids, Dee? No seat belts, no head restraints, single brake systems. Roofs that would crush in a rollover and solid steering posts that would spear the driver in even a mild crash. Sharp metal objects all over the inside and outside of the car.

All of these were easily avoidable hazards whose remedies required govt. intervention in the form of safety legislation. Something as simple as seat belts was aggressively fought by all of the major US carmakers. Not just on a cost issue, either - they did not like the psychological impact that they believed seat belts would create in the minds of car buyers.

Would you want to go back to the kinds of cars we had back then?

Exactly.

Perhaps something really bad would have happened, but the spell prevented it. Who can ever say?

>> Well, would you like if someone called a
>> religion you respect "all nonsense"?

> If it were a ligitimate religion, no.

Who determines what is a "legitimate" religion and what isn't? Who *can* determine such a thing (other than God?)

>However, it is a little hard to
>perceive wicca as a ligitimate religion.

Why not? People have come up with new religions all over the map. Who is to say they were not "legitimate" because their beliefs are different?

>Since little is really known of the
>old pagan religions (especially directly), wicca practices today cannot
>seriously be linked to paganism.

Probably not. Doesn't mean wicca is or isn't legitimate, though. From what little I know, they are trying to reconnect with the *spirit* of those old pagans.

>Instead, the practices today mostly seem
>made up from images and stories in movies, television, and fiction books
>(old and new). And the people involved often take on the personas of
>characters directly from those fiction stories.

Couldn't the same be said of almost all religions now in existence? Most are based on a book or series of books written hundreds or thousands of years ago. Most describe events of the long past that are not provable to be fact or fiction in any way.

Would you say they weren't legitimate?

>Further, their claims of
>spells, charms, and so on, are simply hogwash (childish hogwash).

Would you say the same thing about the power of prayer, miracles,
transubstantiation, and other central beliefs of modern Christianity?

>Everyone
>is certainly free to believe what they want, including those who consider
>the whole thing absolutely ludicrous.
>
Everyone is free to believe up to a point. That point is where someone's purely
religious beliefs begin to infringe on the rights of others for reasons based
purely on belief and not provable scientific fact.

As an extreme example, a religion that required the human sacrifice of
unbelievers can't coexist with others. (There have been forms of Christianity
that fit this description, btw).

> By the way, this is not "us versus them." I have no specific religious
>beliefs, so pointing to a ligitimate religion is not really going to change

> Would you want to go back to the kinds of cars we had back then?

In a heartbeat!!!!! Most wonderful car I ever owned is a 1962 Chev Corvair Corsa convertible.

Big-brother government killed all the really good cars, trying to protect against stupidity like poor driving habits. We could use a lot LESS government around these parts. We'd have a lot less stupid people.

The world is methodically being dumbed down by government efforts to protect us from stupid people.

Stupid drivers don't recognize the dangers of speed, so they drive too fast and kill themselves. The government regulates speed, so now more stupid people survive.

Stupid pedestrians don't know enough to not step out into a busy street, so they get injured and killed trying to cross the street. The government makes laws giving them the right-of-way, so now more stupid people survive.

Stupid parents don't recognize the value of childhood inoculations. The government makes them vaccinate their children before entering school, so now more stupid people survive.

Stupid hams don't know enough to keep their fingers out of 3KV plate transformers, so they get fried in their own juice. Some would have the government protect them, and more stupid people would survive.

In the ways of Mother Nature, stupidity was kept in check because stupid people generally didn't survive to breeding age, thus our species tended to get smarter over time.

But stupidity begets stupidity, so we are being overwhelmed by a tsunami of stupidity. The tsunami is triggered by the government protection of stupid people, which allows them to survive to reproduce.

Ergo, less government regulations makes a smarter populace.

Hans, even if you didn't refer to "sailor" as navy, and certainly within the context of the statement, you referred to Marines, Soldiers, Airmen, and even draft dodgers (hint: if you didn't, you need to arrange the sentence differently)

but.......... The Marines are *indeed* part of the Navy, so yes, Hans, you very much *did* mention Navy. (All apologies to the Marines in here that know that the navy is actually a subset of the Marines!) 8^) hehe.

Kim:

Correct -- which is why I never refer to it as "hilarious," such as you did.

>And, for anyone with even half a brain, *not* such as
>yourself--it is a given that I would not express such assinine thoughts as
>that the death of someone--*anyone* I might add--is hilarious.

Except for the fact that you did, indeed, use that exact word directly in
reference to the death of Dwight's brother.

>Go ahead, though, keep being miserable.

Why should I work your side of the street?

Whether you've noticed it by now or not, Kim, I have already acknowledged
the fact that you could have made a mistake in the use of the word "hilarious"
in it's given context. However, your reaction is, as usual, to go on the
defensive, not accept responsibility for your mistake, and attempt to backpedal
your way to a position of good standing. Did it ever occur to simply take
responsibility for your mistake, offer Dwight and the rest of the newsgroup
a simple, heartfelt apology, and take your fat little fingers off the keyboard
for a while? I didn't think so -- and the results were as predictable as ever.

Hansl:

I am not a parent, and at my age I have my doubts that I'll ever be one.
I come from a very large family, and like about half of my brothers and
sisters, I guess I had enough child-rearing early in my life to make me
not particularly curious to do any of my own. Spending most of my
adult life moving from one country to another every year or two didn't
help much either. However, I don't think I am totally unqualified to make
a statement such as I did in the message you replied to. Children
belong in their own beds, period. I listen to radio talk show and
degreed, licensed family counsellor Dr. Laura Schlessinger all the time, and
she has addressed this issue many times, always stating the same thing
I did. Therefore, we will have to agree to disagree. All I know is, I never
slept in my parent's bed as a child, for any reason, and neither did any
of my 4 brothers or 4 sisters. Quite frankly, I don't know anyone who
ever did.

>
>Kim W5TIT

Kim:

You said, (quoting above) "From Michael Jackson's arrest to the above.
Can it get any more hilarious?" Well, Kim, "the above" included the
shocking story of how Dwight's brother was brutally murdered. You'll
have to forgive me, but I cannot find anything "hilarious" about that!

I have already acknowledged that you may have let that word fly without
realizing that it included the story of Dwight's brother. I am not making
any attempt to grind any axe with you; I just want you to at least begin
to TRY to think things through a bit better before making reactionary
replies to well-considered postings by others.

One more thing -- it would have gone a long way toward helping you
establish some scintilla of credibility if you could have simply accepted
responsibility for your mistake without the accompanying backpedalling.
Perhaps, some day when you grow up intellectually and emotionally,
you may become aware of such things.

Kim,

There is a lot of ongoing coverage of the problems with the Church. What I don't understand is how Michael Jackson keeps having kids over at Neverland - and he has admitted having them in his bed (which is not a crime in itself, but raises a lot of doubt).

Priests are not known for being rich; Michael Jackson is. Yes, problems were swept under the carpet for a long time as the Church is big, but the individual parashes and priests didn't have the wherewithal to keep it hidden forever. I also don't think the individual priests would have kept their 'secrets' for any length of time had they had the visibility that Jackson has.

Speaking of news stories - whatever happened to that pharmacist that diluted the cancer drugs down to 1% and got rich doing it? Sure didn't hear about that much more, did we? Personally, I'd trust drugs out of Canada more than drugs in the USA. Too much leeway and welfare for big business. I notice that the drug companies can force the government as to how they buy drugs. Let a small company try that LOL. Just my opinion.

Really. That's interesting. The issue's gotten *some* play down here but
not like I thought it would have been--given the immensity of the problem.
Also, I've not heard of one arrest or upcoming trial, etc.

Oh, fer cryin' out loud. Take out the last paragraph, the one about Dwight's brother-in-law. The reaction to the Michael Jackson story, as depicted by Dwight in *all but* his relay about his brother's death, is way too much.

In contrast, there is the Catholic Church stories around the same issue. While I haven't read this newsgroup very often over the past year or so, *except* for about the last what--three/four months--I don't recall seeing any "I'm Shocked" posts on those rapes and abuses.

Leave the story about Dwight's brother out of it. And, this is the last I'll say about that part of it--it has nothing to do with what my comments were about. I don't think there's anyone I've seen post in this newsgroup that is *that* heartless. Nearly, but not quite.

Y'know what, Larry? Phuck (HansTM) you and your patriarchal high horse you ride around on. I owe *you* nor anyone else, *but* possibly Dwight, an apology. I can nearly guarantee you that Dwight would know that I was not commenting on the part about his brother. Now sit the phuck down and shut the phuck up.

Woo-hoo, lemme have a 1969 Super-Bee! Alas, all I had was a 1973 Dart with a 318. I would've loved to have a 340 Dart with the bumble bee stripe. <sigh>

One other car that is probably my all time favorite is the 1973 European Ford Capri. Not terribly fast, but wonderfully quick and pretty agile too. I had the 2000cc 4 cyl. model but I'd love to drop a modern Ford 3.8l V6 in one, if I could find one in acceptable cond'n.

Yes, but Jim, don't you think there is a potential for an inordinate amount of fanaticism from both sides of the fence on the Michael Jackson story? For instance, true or not I can't tell ya, but when they were interviewing Jackson on that special back a few months ago, with one of those kids who visits him all the time, he was asked about the kids sleeping "with" him. Even his initial answers were far too direct for me. Openly stating that he always sleeps with kids, etc. BUT, something finally clicked with Michael when something was said about the whole thing and he "caught on" to question was the interviewer talking about kids being *in bed* with him. The kid next to him *and* Michael both stated that they never were in bed together. Michael lets the kid up into his bed, and he (Michael) sleeps on the floor--not much different than having a sleep-over, if you will. Now, both of them may be lying through their teeth, I don't know. But all I have to go on is what I heard.

Yes, that raises doubt by the way. I am even doubtful. BUT, I don't think any of us has the right to indict through having doubt...goodness imagine if we did that with everything we doubt? Jackson probably "deserves" whatever he gets for living life as he lives; but it's uniquely his choice to live as he sees fit. He *does not* uniquely have the right to hurt anyone or even to do anything illegal (to cancel out any misery from Larry or others about me supporting Michael Jackson raping kids--<SIGH>), but I don't any of us knows for sure whether he has done anything illegal or not.

Also, I see nothing wrong at all with kids being in bed with adults. I wouldn't like it myself, never even let my own kids in bed with me--but only because that was beyond *my* comfort level. I have no problem with kids and adults sleeping together. We've become overtly sensitive to the issue. And, I am speaking from the perspective even of having been raped on more than one occasion as a child--so it's not because I "haven't been there" so to speak. Been there, done that, threw away the tee-shirt because who'd want a souvenir?

Hmmmm, not sure I'm grasping the introduction of this train of thought.
Neither has Michael Jackson been able to sweep things under the carpet.
While I've not paid much attention, hasn't there been news stories about
Jackson and this for the past 3-4 years anyway; and even a court trial
that's already happened once?

>

Ah, duh. I could've read that before I made my comment above, but I'll
still leave it in. BUT, would people be so inclined to be as vociferous on
the topic of the Catholic Church? I think I mean by that, that we jump on
the bandwagon quicker with the Jackson story because of the reasons I
mentioned above: fanaticism. Love 'im or hate 'im, you know what I mean?

I wish I could figure out a way to get my prescriptions from Canada. I
won't do things illegally and if there is even the slightest chance that
it's illegal, I don't want to even try. 'Cause I am with you, I trust the
drugs coming from there just as much as I do from here--they are all the
same companies (for the most part). There isn't another "recipe" just
because it's a Canadian drug. :)

Larryl,

Don't believe everything you hear on the radio. Dr. Laura is wrong, and you're wrong. Colleen and I have 5 great, well adjusted children who prove you flat wrong. You're a sibling, not a parent, and you don't have even a trace of a clue.

OBTW, Larryl, I should point out that one of our daughters, Gretchen, is also a "degreed, licensed" child counsellor, and she actually practices in the real world as opposed to chatting about it on the radio. And her three little tykes are regularly found in the same bed with their parents. Sorry, Larryl, but in this discussion you're kinda like someone arguing about Morse code but has never learned it themselves.

"Dr.," which she is not I hear, Laura is so far out of reality it's not even humorous to listen to her...

An aside to the whole thing: Larry has (how many times?) berated people for their opinion of CW, or ham radio, or whatever, for their having no experience. Well, you're right Hans. He's not a parent, so he doesn't have clue, nor would he know where to find one.

Perhaps all the more reason for Ham Operators, and anyone else, to want these guys off this country's radio frequencies.

You're being brainwashed.

As for me, I'm sick and ph**king tired of "inside reasons".

For "inside reasons", Zacarias Moussaoui will probably suffer nothing more than deportation on immigration charges.

Robert Hanssen, a long time trusted FBI agent, spied on his own agency for the Soviet Union. Dozens of agents, many of them Americans, were executed as a result of his treason. Instead of a quick and merciful administration of a lethal injection, for "inside reasons" he sits in a nice comfy federal facility, and his family lives on a comfortable federal pension at our expense. (If I'm ever convicted of a felony --- ANY felony, let alone TREASON --- my family will see zippo-squat-nothing of my federal pension.)

I don't want to hear about any "inside reasons".

Yes, I'm sure your concerns are on America's list of
national priorities. In fact, I think you should contact
George W Bush & the U.S. Congress immediately and
request they act on this now!

ROTFLMAO!

The specific spell requested could only have resulted in something bad.

> Who determines what is a "legitimate" religion
> and what isn't? Who *can* determine such a
> thing (other than God?)

You just love to ask the "who determines" question, don't you? Especially when the answer is bloody obvious - like with most other things, people do. People either decide it's a legitimate religion or not. A small, fringe, group of supposed believers don't make a religion legitimate (Hale-Bop's Heaven's Gate cult, for example), especially when the vast majority believe it's a load of crap (and I do suspect the vast majority don't really believe wiccas can actually cast spells, charms, and so on).

> Why not?

Already answered in the paragraph you quoted (the paragraph taken as a whole, not sliced up into individual sentences).

> Couldn't the same be said of almost all religions
> now in existence? Most are based on a book or
> series of books written hundreds or thousands
> of years ago. (snip)

However, the practices of today's wiccas seem mostly made up from images and stories in FICTIONAL movies, television, and books, not religious material and literature written by those who practice that religion. In other words, since so little is known of the old pagan religions, wiccas simply 'borrowed' things like black robes, symbols, supposed spells, and so on, from relatively modern day fiction.

> Would you say the same thing about the power
> of prayer, miracles, transubstantiation, and other
> central beliefs of modern Christianity?

It is one thing to pray for assistance from a God and quite another to actually claim to have personal powers to cast spells, charms, and so on. I would ask for similar proof from anyone, in any religion, who claimed to have such powers (any powers).

> Fine - but then why discriminate between "legitimate"
> and "illegitimate" religions?

Words alone do not discriminate, Jim. Nobody has been deprived of anything by my words.

Note we're talking about the subject (young boy) of the current legal proceedings. Since there were no actual criminal charges in the first incident ten years ago, and nothing actually proven, it would be difficult to prove a clear and present danger existed for this boy. However, since criminal charges now exist and are widely known, it should be easier to prove a clear and present danger existed when it comes to parents who allow their kids to sleep with MJ in the future.

You may think that, but it doesn't necessarily make it a crime. Something more has to exist before it reaches that level. In the case of Michael Jackson, it appears that something more did exist (making that a criminal matter).

> Even in the case of parents, it is definitely

I have to agree with the others on this. I just don't see any real risks associated with a young child sleeping a parent or parents.

OK - The RSGB list has UK, Switzerland, Belgium, Germany, Norway, the
Netherlands, Ireland, Singapore and Luxembourg. However, I'm also aware of
Papua New Guinea and Finland who have abolished the code test already,
Australia who have announced a date of Jan 1st, and New Zealand, who say
sometime before the new year (but no date). So that's actually 11 so far,
and at least 13 by the new year, probably more. I don't think we will know
which countries might keep a code test until at least July (i.e 12 months
after the ITU decision), and I don't think they will be a majority (?).

Not always.

Suppose you're in a situation where money is tight but you can expect big
increases some time in the future. (example: kids are small and one parent is
home with them, but when the youngest reaches school age both parents will be
working full time). In a case like that, having a lower monthly payment may be
the best alternative even if it requires a longer loan term.

That's simply another version of looking at their income out-of-context and saying "I can afford X" without doing the numbers. If you can't afford to pay off the credit cards at the end of the month, you really can't afford the purchase made on them.

I consider credit cards as "payment cards", nothing more.

Larry,

You might want to look up "Dr." Laura's credentials and see what subject she holds a doctorate in.

You might also be interested in the qualfications required to be a "family counselor" in the state where she practices.

The good "Doctor" offers quick, authoritarian solutions to selected problems (note that all calls are well-screened first). Her callers are simply not allowed to disagree or present opposing data, nor to deal with anything in-depth. The good "Dr." always has her finger poised on the hangup button.

Most of all, there is no followup to see how well the advice worked out.
>
>Larryl,
>
>Don't believe everything you hear on the radio. Dr. Laura is wrong, and
>you're wrong.

On the subject of children sleeping with parents, you can find degreed, licensed experts that endorse the entire spectrum from "never, ever!" to the "family bed" concept.

>Colleen and I have 5 great, well adjusted children who prove
>you flat wrong.

What those 5 prove is that simply that the sum total of their nature plus nurture worked out well. And that says a lot.

How many children has "Dr." Laura raised?

>You're a sibling, not a parent, and you don't have even a
>trace of a clue.

Can we apply that same standard to those who want to do away with Morse code testing even though they don't know the mode and have never used it?

Dr Laura is an entertainer. I was entertained by her show for about 2 weeks.

Gotta wonder about the people that call her. (if indeed they are real
people) If they are real, the first diagnosis is that they are masochists.

Since no single religion in the world enjoys a "vast majority" of the
population as "supposed believers", then it follows that the "vast majority"
of the worlds population on average believes that Judaism, Islam,
Christianity, Hinduism, Shintoism, Scientism, Buddhism, etc. are each
individually a "load of crap" also, and not really legitimate. I think
I'll just believe in all of them to make sure my bases are covered.

One is innocent under the law until proven guilty in a court of law. That does not suggest even for a moment that people cannot have their own opinions or beliefs concerning the guilt or innocence of a person, or voice those opinions or beliefs.

I agree with the latter, although it is a nuisance when you can't get the kids out of your bed, so not a good idea to encourage them. Any harm is likely to be to the parents, not the kids!

Now, if one spouse is not a biological parent, that's potentially a different ball game, but I won't go there.

I don't necessarily think that a child sleeping with a non-parent is always a problem, but in Jacko's case the circumstances are highly

worrying and suspicious.

Do try to separate the discussion in this newsgroup from potential court proceedings, Kim. Larry was talking about the use of race as part of the defense of Michael Jackson in any eventual court proceedings. I responded to that. Since I seriously doubt either Larry or myself will be involved in any court proceedings against Michael Jackson, any mention of race here is not going to make race an issue there (in that court room).

Hell, I'll go there, because to not "go there" just panders to people with twisted dirty little minds who think "something must be going on there". Just to make it interesting, let's say that the child is adopted. Those of us who are parents (and I think most who aren't parents) understand the unconditional love parents have for their children, be they "natural", "step", or "adopted". Until the very recent past, perhaps less than 150 years in this country, and much more recent than that in less developed parts of the world, families didn't live in 3 and 4 bedroom homes where each person had their own "space". Not only did Dad and Mom and the kids sleep in the same place, but also Grandpa and Grandma and the occasional cousin or Auntie or Uncle who might be without their own nuclear family to spend the night with. Dr. Laura would likely have a heart attack if she saw how some people live today in places outside her privileged neighborhood.

Well, a qualified yes. I've found people, including myself, sometimes
too optimistic when dealing with "future" things, like earnings and
expenditures. While what you sat is true, I'll take the tack of either
paying the thing off ASAP, or go without. Maybe even save for what I
want. (Modern Heresy Alert!)

No apology needed, Kim. I interpreted that as you thinking it hilarious that I would mention my brother's death in a discussion about Michael Jackson. And perhaps it was not the best place to bring the subject up. However, since Larry had mentioned race-riots, it gave me a very rare opportunity to point out the wider impact of these riots (consequences far outside the immediate area). I took advantage of that opportunity. In my brother's case, the consequences were felt all the way across the country in Florida. This message gives me an opportunity to also point out that these wider consequences are rarely reported in the news.

Actually, if I remember correctly, there have been several discussions in this newsgroup over the last couple of years about the sexual abuse of young men within the Catholic Church. Of course, since this situation involves a widely known person, it is natural for this situation to garnish far more public attention.

Yup.

Of course, there are a notorious few who abuse children. They are the rare exception, not the rule.

>Until the very recent past, perhaps less than 150
>years in this country, and much more recent than that in less developed

>Auntie or Uncle who might be without their own nuclear family to spend the
>night with.

Yup.

And due to all sorts of diseases and the risks of childbirth, "blended families" were extremely common. In some cases, the youngest children in a family would have no blood relation to the oldest ones.

The concept of the "nuclear family" is extremely new.

Here's another situation for you: Lots of people I know go tent camping with their kids. One tent per family. Bunch of sleeping bags on the floor of the tent, or in the back of the minivan. Not exactly "the same bed" but not much privacy either.

Are all those folks damaging their kids? I don't think so!

>Dr. Laura would likely have a heart attack if she saw how some

> [Robert Hanssen's] family lives on a comfortable federal pension at our
> expense. (If I'm ever convicted of a felony --- ANY felony, let alone
> TREASON --- my family will see zippo-squat-nothing of my federal pension.)

Remember that a civilian pension is an annuity that the employee
BUYS (is not "given") with after-tax money contributions. After
five years of service, the employee is entitled to the annuity
based on number of years of service and last 3-year high salary.

UNLESS the employee is convicted of treason, the Federal Civil
Service pension annuity must be paid regardless of other criminal
convictions and penalties.

If Hanssen was convicted of treason, the annutity would not be paid
whether he was granted probation/parole, served time or was executed.
If he was executed for some crime other than treason the annutity
would be have to be paid to his surviving spouse.

Your military pension may be different (you may not have been
required to make contributions, for instance) and may have
different terms of retention.

> I don't want to hear about any "inside reasons".

I agree though - Hanssen got off very easy - probably because he
knew where important counter-espionage bones were buried and a plea
bargain was the only legal way to get the info from him. So much
for "inside reasons".

Now back to our regular code/nocode bashing.....

Obviously, I couldn't resist the topic either (it appears the same is true for others). And, yes, it is certainly off-topic. However, I hope there is room in this newgroup for less formal discussions also. After all, as ham operators, we do like to talk, in some way or another, with others. However, for those who are not interested, I made sure the topic was very clear in the subject line so they can easily skip the discussion.

> (snip) I'll grant the one arguement that will
> come up - there will be folks out to make
> money. (snip)

Oh, you can bet your bottom dollar on that. Lawyer fees. Advertising for the news organizations. Lawsuits. Book deals. Interviews. The lecture circuit. Paparazzi. The tabloids. Money is going to be flying everywhere.

> Personally, I think the guy is right off his rocker,
> but the name of the game should be to protect
> society (especially kids). (snip)

Yep. That's why I tried to avoid anything outside that in my original message. If the guy wants to sleep in an oxygen tent (or not), more power to him (even if I do think it's a little strange).

> (snip) I believe, and please correct me if I am
> wrong, that he was never married until that mess
> 10 years ago or so. Suddenly, he gets married.
> And divorced. And ... so on and so on.

I also found his sudden desire to get married somewhat questionable.

> I totally agree with your accessment as to
> classic symptoms of a pedophile. Neverland
> should be renamed Never - Ever land. Why
> just the kids and not the whole family? (snip)

I've always been interested in detective mysteries (in the Sherlock Holmes style), so have read a lot (both fiction and non-fiction) on the subject of criminals and law enforcement. Based on what I've read, Michael Jackson seems to fit the classic picture of a pedophile.

> Sorry for the long ramblings. I suspect, as do
> you, that this case is going to be another media

> circus court case. (snip)

What you wrote was well thought out, so was a joy to read. As for the media circus, this case may reach an all time high (or low depending on your perspective).

> If he isn't convicted, how old do these characters
> get before their libido finally slows down? (snip)

Based on what I've read, quite old. Note that we're talking about a diverse group here. Not all pedophiles seek actual sexual intercourse with children. Some limit their activities to just looking at images of, or photographing, young children. Others prefer to touch or fondle children or have children touch or fondle them, but may never go beyond that. And, of course, some are seeking sexual intercourse. Whatever the case, the sex drive tends to mirror the sex drive of a normal person. In general, attempts at actual sexual intercourse tends to slow down by the late thirties to early fifties, but fondling and touching may continue for many years after that. Some pedophiles have been arrested in their seventies or even eighties.

Actually, I'm not proposing anything at all. In my opinion, the FCC is doing a fine job of regulating the Amateur Radio Service. If someone is going to propose a poll to influence that, then the poll should take into account everything the FCC must take into account (that includes all Americans, not just those currently licensed in a particular radio service).

Well, you know, we go camping all in one tent. There are partitions, but they are only made of canvas. It's private enough when the kids are asleep, though. For that matter, even if you are in different tents you can hear everything. I imagine that where everyone shares one room it's a matter of waiting until everyone is asleep and being very quiet.

I meant to answer that in the last message. Anyway, it's time to move on to something besides just endlessly debating the Morse Code testing requirement. This debate has sharply divided the Amateur Radio community and I think that alone is having a major impact on any attempts to further the goals and purposes of the Amateur Radio Service (we can't discuss anything without this topic constantly interfering).

Somewhere in there Brainy had a point to make.

Quite funny...or should I say pitiful...coming from an alleged
veteran who STILL has not acknowledged the difference between a
"commander", as in the senior officer of a military unit, and a
Commnader, Naval paygrade O-5.

Nor can he differentiate "authorization" from "acceptance"...Now
CAN you, Brainy?

Please...another quick and witty rhetorical quip to dazzle us
with, Brainy.

As stated, no one (*other* than possibly Dwight) was owed an apology. Have
you ever seen me demand an apology for being offended by you, Larry? And,
as has come to pass, Dwight was quite reasonable (something which you
neither understand nor are capable of) about how he understood the post.

And, as to your opinion of me--or anyone else, Larry--you are the last soul
on this Earth with whom I find any merit for anything done or not done by
others. Now, back to forgetting about responding to you since you drone on
with your impish, childish, boring, self-centered ignorance...

You and your *"Dr."* should have some tea...

VIRUS ALERT - W32.Swen.A@mm Worm - VIRUS ALERT - VIRUS ALERT - VIRUS ALERT - VIRUS ALERT

If any experienced users find these alerts irritating please remember that there are many less experienced users out there who might well be caught out by these viruses and it is these who the alerts are intended for.

It is also necessary to leave the cross-posts in place as it is not practicable to post separate warnings to each group.

There are now three new viruses rampant at the moment. This one, arriving as an email or NG message with a very authentic looking web page with an EXE or ZIP file attached to it which pretends to be a patch or upgrade from Microsoft. Don't run the file. It's the W32.Swen.A@mm Worm virus.

The second arrives attached to several different emails or NG messages, all with very rude subject lines. It appears as a SCR file (screensaver) or as a link to an SCR file. Either way it's the Win32.Spybot Worm. Don't open or click the link

Here are some of the subject lines:

Last nights a**l orgy pics
My Sister M*****b**ing
Neighbor Tanning Nude
Pics of my Girlfriend topless
Rubber Fetish Pics
Christina Aguilera Nude
HOT HOT HOT
3WJoVQ HOT HOT HOT celebs 3WJoVQ(,
also Christina Aguilera with a bit of code at either end.
Hillery_Duff.scr Nude
Halle_berry.scr Nude
Re: Jessica_Simpson.scr Nude

Watch out for new subject lines for this one. Don't run *any* screensaver unless you're 110% sure it's bona fide. Infected *.scr files will work just the same as *.exe files and can do just as much damage.

And now we've got:

Hi, Maness, Your Account at Dell.com has expired.

containing the W32.HLLW.Torvel.B@mm worm.

X-Complaints-To: abuse@supernews.com

Nemo

> [Robert Hanssen's] family lives on a comfortable federal pension at our
> expense. (If I'm ever convicted of a felony --- ANY felony, let alone
> TREASON --- my family will see zippo-squat-nothing of my federal
pension.)

Remember that a civilian pension is an annuity that the employee
BUYS (is not "given") with after-tax money contributions. After
five years of service, the employee is entitled to the annuity
based on number of years of service and last 3-year high salary.

UNLESS the employee is convicted of treason, the Federal Civil
Service pension annuity must be paid regardless of other criminal
convictions and penalties.

If Hanssen was convicted of treason, the annutity would not be paid
whether he was granted probation/parole, served time or was executed.
If he was executed for some crime other than treason the annutity
would be have to be paid to his surviving spouse.

Your military pension may be different (you may not have been
required to make contributions, for instance) and may have
different terms of retention.

> I don't want to hear about any "inside reasons".

I agree though - Hanssen got off very easy - probably because he
knew where important counter-espionage bones were buried and a plea
bargain was the only legal way to get the info from him. So much
for "inside reasons".

Now back to our regular code/nocode bashing.....

Well, of course there is no such thing as a simple one sentence answer in these regards. Specific details would have to be investigated for each person. In my old man's case..... he feels it is a good deal. And the funds that he would be recieving would go to his investments which would yield a better dividend to him, and if things get really hairy, he can always utilize those funds for care. Again, not the same for others.

Just a few short weeks ago, auroral activity imposed so much distortion on HF voice that it was not useable. At the same time, the distortion on the HF computer operated digital modes was great enough that the computer could not decipher them. Of the computer operated digital modes, the newest one, PSK31, failed first. RTTY held up a bit longer but it also failed. Although distortion on the HF CW/Morse signal also existed, the human brain version of a computer could and did decipher the signals into intelligible, useful data when all other modes were useless. The choice was operate code or turn off the HF radio. If code is not necessary in ham radio today, then neither is HF itself.

But in regards to the math..... compare a 10,000 dollar mortgage versus the 10,000 car loan with applicable rates. Nowhere did I say that one should use refinancing money to pay off other debts. The other debts themselves to be paid off quicker if at a higher interest rate is what I said, even if I didn't make that painfully clear.

While I try to avoid posting to my own comments, I see that I need to add
additional information.

This phenomenon becomes more severe the further north that your station is. It was quite noticeable here in Michigan but it would have been less severe in places like South Carolina where QRZ shows Dwight lives. Southern stations may merely have noticed the absence of northern stations on the air if they noticed anything at all.

Actually, I am not sure about the Dow, but my fund of which is comprised of alot of the DJIA stocks, had increased substantially from the early 90's till about the time baby Bush was elected.

Which should be the case as nearing closer to the retirement age. Less time
to "make up" the losses if they occur then.

Bingo.... keep money going into savings and then take the funds out when you
need to purchase, but that is an idealism that most cannot grasp.

Well since you brought up the auto manufacturers..... Obviously there are some cases where we have no choice in the matter. But in my own personal case, I will NEVER buy a new car from the auto manufacturers.... I will however buy one at least one year old, and from a private party, not a dealership.

There are other obvious cases as well where conceding in this issue is almost unavoidable. Obviously if your situation requires you to have an automobile, then purchasing fuel would be an at least occaisional requirement. Still in those cases, I choose to support the locally owned franchisee's as opposed to truly corporate owned gas stations.

OK, fine. Let's do just that.

The issue will be decided one way or another by the FCC at some point
anyway.

> This debate has sharply divided the Amateur Radio community

I don't see that at all in "real life" amateur radio outside
newsgroups and such.

> and
> I think that alone is having a major impact on any attempts to further the
> goals and purposes of the Amateur Radio Service

We'll have to agree to disagree about that)

>(we can't discuss anything
> without this topic constantly interfering).

I say the opposite is true. We can try, anyway.

Here's a selection of topics:

- Regardless of code test requirements, should there continue to be
separate HF subbands for voice/image and cw/data modes in the USA?

- Is there a need to change the entry-level license requirements and
privileges?

- What can/should be done about CC&Rs?

- What can be done to increase the visibility of the ARS to the
general public?

- Are contests a good thing or a bad thing for the ARS?

- Is homebrewing by hams dead or dying?

- Should there be a minimum age requirement for a ham license?

- Should there be an experience requirement for upgrading?

- How many classes of ham license should exist, and what should the requirements/privileges be (other than code test/no code test)?

Pick one or more, or sugghest your own, and let's go!

Considering the 10-year license term:

How many of those 28,913 hams are still alive?

How many are still active?

And most importantly, how many are ARRL members (only ones who can vote)?

Been there, done that.

But how much experience? Looks like someone could waltz in and get a
full-privs ticket right away under that proposed system.

Perhaps it might be a good idea to simply drop the matter while you're still ahead, Kim. Your words were certainly questionable and could easily be interpreted the way many others did. But I made a choice to interpret those words differently to avoid additional confrontation. But that doesn't mean that my chosen interpretation is really what you meant, or is now a defense of what you said. Enough said.

Then you didn't notice the following sentence

--- Holders of this license would be required to have 2 years experience as
a licensee ("time in grade") before being eligible to upgrade to "Class A".

Has anyone noticed the Jackson spin machine in action lately? In just the last few days on the talk shows, I've seen or heard from Michael Jackson's brother, father, sister, several fans, his ex-spiritual advisor (?), his ex-magician (?), and so on. Did you also notice they all seem to be using the exact same words ("he's a child himself," "its' normal for him to sleep with kids," "it's all totally innocent," "they're out to get him because he's famous," and so on). Too bad the victim's family doesn't have that type of support on those talk shows.

Perhaps you mean HF voice was limited, not unusable. I wasn't aware that all HF voice communications, including short range, was impossible during that period. Regardless, a very temporary condition doesn't make a mode itself necessary in the overall scheme of Amateur Radio. Amateur Radio continued on during that period, even for those HF operators who simply decided to turn the radio off or to other frequencies during that period. At the same time, I heard no reports of emergency services, or other similar Amateur Radio activities, being seriously disrupted.

Dwight, I certainly don't mean to imply you are "defending" anything I said.
I'd hardly want that and would be quite surprised by it. And, I didn't see
anyone else but Larry have the reaction to it...well, maybe Mike I think.
So, I don't define that as many. It's a pretty near given that I (nor many
others in this newsgroup) would find anything like the death of someone else
"hilarious."

At any rate, it disappoints that you chose to interpret something because
you wanted to avoid additional confrontation. I would hope you'd never
modify what you say, apart from what you truly believe, because of avoiding
confrontation. Ya sure won't find that from me...

>>
>> 73 de Larry, K3LT

>As stated, no one (*other* than possibly Dwight) was owed an apology.

Kim:

On the contrary, your faux pas was offensive to many others. What made it
so is the fact that, as usual, it was posted with little or no thought given to
it's possible effect. And, in a nutshell, that's your main problem. You don't
seem to have any process of careful, thoughtful contemplation involved in
your postings. You simply make ill-considered, off-the-cuff reactions which,
invariably, get you in trouble. You have no intellectual credibility in this
newsgroup, and, I dare say, that is most likely the case in the rest of your
interpersonal and working relationships as well.

>Have
>you ever seen me demand an apology for being offended by you, Larry?

No, but I've never said anything to or about you which could be considered
offensive, Kim -- just truthful.

>And,
>as has come to pass, Dwight was quite reasonable (something which you
>neither understand nor are capable of) about how he understood the post.

I was impressed with Dwight's restraint -- too bad you didn't exercise any
yourself, or we wouldn't be having this discussion now.

>And, as to your opinion of me--or anyone else, Larry--you are the last soul
>on this Earth with whom I find any merit for anything done or not done by
>others.

I require no validation of my qualification to judge your behavior and
actions, Kim. I am an intelligent and educated person, who has developed
mature judgement and the ability to express myself with clarity and

conviction. OTOH, you have clearly demonstrated that you are none of the above. Therefore, you're only wasting your time if you think you can possibly discredit me in any way.

>Now, back to forgetting about responding to you since you drone on
>with your impish, childish, boring, self-centered ignorance...

Suit yourself.

>You and your *"Dr."* should have some tea...

I would consider it an honor and a privilege to have tea with Dr. Laura Schlessinger. If that fine day should ever come, rest assured, your name will not be mentioned. I don't need her help in dealing with the likes of you.

Mike:

I'll attempt to explain. As a public figure, Mr. Jackson has the ability to
influence people on the basis of his personal behavior. His actions cannot
be separated from his music simply for the convenience of his audience.
A lot of young, impressionable people view him as an idol or a role model.
When his personal behavior turns out to show him to be a man of
highly suspect morality (if not sanity), then his influence immediately
turns negative -- or at least, it should. Like all public figures, Mr. Jackson
will have supporters and detractors. Personally, I find little about his
personal life which would incline me toward considering him to be anything
but a hedonistic, emotionally-incompetent, and potentially dangerous
person, who should never be given access to anyone's children.

Yes, at one time, I liked his music, and I do not deny his talent as an
entertainer. However, that is not enough. He now resides in the garbage
disposal of my esteem, along with the Dixie Chicks.

For local communications, one has many choices and although one could use HF there are better frequencies for that and experienced hams know that. The choice for local work is generally going to be VHF. So when hams are talking about HF propagation and usage, they are talking about other than local communications.

Long distance HF voice was unusable during that time for many locations (the north is affected worse by auroral but geomagnetic disturbances seem to have an equal effect everywhere). Such "temporary conditions" can happen several times a year. If one wants or needs to make other than local contacts then yes code is necessary. We've had several such occurrences in the last month. Auroral conditions and other items like geomagnetic storms can affect all the HF frequencies simultaneously. So for long distance communications under such conditions, changing bands or frequencies within HF is often of little help. Yes one could turn off the radio if they didn't know code but why place that limit on one's self? If the choice is to turn off the radio or use code then I'd say that code is indeed necessary whether or not it is an emergency.

Michael Jackson was actually cool at one point in his life, but that was back when he was actually black, male and straight. Now I am not sure what to call him..... is he male or female, black/african-american or white, gay or straight?? I think he should assume a symbol like Prince did, but Mikey Jackson's should be a question mark!!!!!!!!!

OK, I missed the earlier part of this thread, and I'm probably opening a
huge can of worms by asking this, but....

What do you have against the ARRL? I've had nothing but good
experiences with them, both at HQ and with their representatives
locally.

Enough said, Jim. Sorry for being so defensive.

Hey, wait a minute. Is this the right newsgroup? Nobody ever says they're sorry in rec.radio.amateur.policy. But here, the word "sorry" is being thrown around enough to be almost obnoxious. Let's not take this too far, okay people? ;-)

Well, I tend to value my conversations with others in this newsgroup (including you), so will rarely engage in open confrontation with any single person for very long. I figured I've argued with you enough over the last couple of weeks or so, so decided to avoid yet another argument this time. Call it a temporary truce, but obviously don't expect it to last forever. :-)

Oh, hell, let me go ahead and do it:

It's a pretty near given that I, nor many others in this newsgroup, would find anything like the death of someone else "hilarious." There, maybe the parentheses confused Larry...

No

> - Should there be an experience requirement for upgrading?

No

>
> - How many classes of ham license should exist, and what should the
> requirements/privileges be (other than code test/no code test)?
>

Either one or two

Requirements should be theory tests

Privileges should not involve subbands like the current system, and should
not give someone a band if they can't use the bands on either side of it

(e.g. as in Canada). Nor should someone be given some modes and not others on any particular band. I am, however in favour of a power restriction for a lower tier licence, even though it would be hard to enforce.

A lower tier licence might allow use of, say, 160m, 10m, VHF and UHF, all at reduced power.

I agree again!

Of course, this isn;t a new idea - the old Extra required at least two
years as a General, Conditional or Advanced before they'd even let you
try the Extra test. A good idea that was abandoned about the same time
the Novice became full-term renewable.

Even further back (70 years) the old Class A required a year's
experience.

Everything old is new again.

>(insert here LHA and LHA(jg)
> rotors being spun up in mock indignation),

I wanna be around when you explain to them that their "PROFESSIONAL"
experience doesn't mean diddly-squat towards that requirement. And
that an elementary-school child with 2 years amateur experience is
qualified to take the test, but non-ham PROFESSIONALS aren't.

Sunuvagun!!

DO you really think it's mock indignation?

> and experience need not be
> current.

Now that I think about it, acceptance of noncurrent experience would
be a logical consequence of "one learner's permit to a customer". If
someone got an LP and didn't upgrade within 10 years for whatever
reason, but then later was able to pass the full-privs test, their old
experience would need to be accepted, otherwise they'd be locked out
of ham radio forever.

Personally I favor a three-level system, with a year experience at the
entry and intermediate levels. I know you see that as unnecessarily
complex. Point is, the principle is the same.

Even further back (in 1919) the old Amateur First Grade was required to pass a 10WPM test in Continental Morse

Even even further back (in 1913) the old Amateur First Grade was required to pass a 5WPM test in Continental Morse

Even even even further back (in 1912) the old Amateur First Grade "must be able to transmit and receive in Continental Morse, but no speed rate will be prescribed." (Presumably 1 word per fortnight was sufficient.)

Everything old is new again.

OK, JJ. Put up or shut up. Where am I/have I backpedaled? I said what I
said and haven't denied saying it. I also meant what I said and haven't
said that I did not mean it. The *only* thing I have said is that the story
of Dwight's brother's death was not meant to be wrapped up as what I would
define as hilarious. So, where's the backpedaling?

Your arrogance and audacity precede you...

JJ:

Good question. I would define them as "parents" only in the biological
sense of the term. Unfortunately, there are a lot of sick people out there,
and they have a way of finding each other.

Kim:

The problem is, the way you constructed the sentence in question,
anyone who didn't know you would simply take at face value, to your
discredit. I'm just trying to help you out, here, but you still need to
call me names. Pitiful.

Kim:

Yawn! Ok, apparently you need some help here. I *think* that what you
meant to say goes something like this: "It's a pretty near given that
<neither> I, nor many others in this newsgroup, would find anything like
the death of someone else "hilarious.""

An alternative version would be: "It's a pretty near given that
I, or any others in this newsgroup, would <not> find anything like
the death of someone else "hilarious.""

Is that what you meant to say, Kim? If so, I think that you could benefit
from some basic classes on English composition, with an emphasis on
sentence structure.

It's a proven fact that beer actually improves fishing - the fish caught, and the ones that got away, are a _LOT_ bigger while one is drinking. If you don't believe me, just ask any fisherman. ;-)

Perhaps much of that impression is caused by whether you agree or disagree with what being said at the moment. I agree with Larry on some things, and don't on others. I agree with you on some things, and don't on others. When anybody agrees with another, their comments are going to, of course, sound similar. When I agree with you, Larry accuses me of sounding like you. You're now accusing me of sounding like Larry. Unless I agree with everything each has to say, I can't possibly satisfy both of you.

He used to wear a white glove as a symbol of something. However, I've noticed recently that he's now wearing a black glove. Perhaps this signifies some significant change in his life. Exactly what is another question mark.

A: Richard Pryor got burnt on coke, Michael Jackson got burnt on Pepsi!

Q: Why did Michael Jackson get upset after he called Boyz-2-Men??
A: He found out they were'nt a delivery service.

Michael said to Debbie one night, "I fancy some entertainment, what shall we
do?".
To which Debbie replied " I know we'll get a video".
Michael then said " Great, Ill get Aladdin".
Debbie said speedily "No Michael, You have been in trouble for that before"

`What's black and comes in little white cans?
~Michael Jackson

`What famous celebrity had the most children over the last 10 years?
~Michael Jackson.

Prince Michael Jackson, Jr. --- you know in a few years they'll probably
change his name to:
The Child Formerly Known as Michael Jackson's Baby

`What do Michael Jackson & Michael Jordan have in common?
~They both play ball in the Minor League.

`What's the difference between them?
~One is in the Minors, the other is into Minors.

`Why was Michael Jackson relieved of his Cub Scout Leader duties?
~He was up to a pack a day.

`What happens when Michael talks about sex?
~It's all very tongue in cheek.

`What has 18 balls and 3 pubic hairs?
~A Michael Jackson slumber party.

The Pope has issued a proclamation on Michael Jackson. If he hears any more allegations about little boys, the Pope says he'll have no choice but to make him a priest.

`What do Michael Jackson and Willie Shoemaker have in common?
~Both ride 4 year olds.

`How do we know Michael Jackson is ready to release another album?
~He has a lot of stuff in the can.

`What will they call Michael's new TV series?
~Anus and Andy.

I understand that Micheal decided to have a boy of his own because it's too expensive to rent them at $2 Million a pop.

What do Michael and Mrs. Perot have in common?
~Both f**k little assholes.

`Why doesn't Michael sleep with boys anymore?
~He's tired of all the cracks.

`Did you know they're putting out a Michael Jackson stamp?
~Fans get to vote for the white or black Michael Jackson.

`Why did Michael go to college?
~To get his Bachelor of Arse degree.

`Why's Michael trying out for the NBA?
~He's a crack shooter.

`Who's Michael Jackson's favorite poet?
~Emily Dick in son.

`What does Michael call an orgy?
~A fruit salad.

`What's the difference between Michael and a proctologist?
~A proctologist doesn't pay for the assholes he's poked around in.

`Why doesn't Michael have orgasms?
~The big payoff comes a couple of months later.

`Why has Michael been appearing on children's shows lately?
~He has a lot to plug.

`What's the worst stain to try to remove from a little boy's underpants?
~Michael Jackson's makeup.

`Hear about the new "Michael Jackson" candy bar?
~It's made from white chocolate, and contains no nuts.

Michael Jackson and Woody Allen on "Child Psychology":
"Spare the rod, and spoil the child."

`What did Michael Jackson say to Woody Allen?
~Got two fives for a ten?

`What is Michael Jackson's Alma Matter?
~Bring-em Young.

`Did you hear about the duet by Michael Jackson and Elton John?
~It is titled "Don't let your son go down on me."

`What's the difference between Mr. Potato Head and Michael Jackson?
~Michael Jackson has had more noses.

`What did Michael Jackson suffer from as a kid?
~Clitoris envy.

`Why did Michael invite MacCauly Caulkin to the house?
~He's like the little boy he never had.

`Why does Michael really need to go to rehab?
~He's a crack addict.

`What's Michael Jackson's favorite nursery rhyme?
~"Little Boy Blew."

`Did you know that Michael Jackson just turned 35?
~Yeah, but he still feels like a 13 year old.

`How did Michael get in trouble?
~He was feeling a little Randy.

`How is Michael dealing with his problems?
~He's holding his own.

`How are Michael's friends dealing with the problem?
~They're all standing behind him.

`How did Michael actually proposition the little boy?
~It was just a slip of the tongue.

`What's sex like for Michael?
~Child's Play.

`How is Michael now?
~Feeling a little crotchety.

`Hear about the new Michael Jackson doll?
~It comes in a little can.

`Why does Michael like children so much?
~He knows how they feel.

`Did you hear Michael Jackson was running a "blue-light" special at a local
K-Mart?
~Little boys' pants were half off!

`What makes Michael Jackson so unique?
~It's the little boy inside him.

`How does Michael like to party?
~He sips a couple of Tall Boys.

`What's Michael's favorite snack?
~Slim Jims.

`What's Michael's favorite fast food?
~Big Boys.

`How do we know Michael is guilty?
~Several children have fingered him.

`Why is Michael so tough?
~He can lick any kid on the block.

`What's the new movie about Michael Jackson called?
~"The Hand that Robs the Cradle."

`What's the difference between Nixon and Michael Jackson?
~One was a consummate asshole, the other a consummated asshole.

McDonald's is bringing out a new burger ..."Micheal Jackson Burger"... It
has 35 yr old meat inside 5 yr old buns.

`WHAT DID MICHAEL JACKSON SAY WHEN HE GOT BACK TO NEVERLAND RANCH FROM DRUG
REHAB?
~ YOU KNOW, I FEEL LIKE A NEW BOY!

What are Michael Jackson's favorite sayings?
1) There's a sucker born every minute.
2) Kids do the darndest things.
3) Tricks are for kids.

`What's Michaels' next movie?
~Honey I Blew the Kid.

`What's Michaels' favorite group?
~New Kids on the Cock.

`What do Michael and Gaylord Perry have in common?
~Both have held lots of wet balls in their hands.

`What's sex like for Michael?
~Like candy from a baby.

`What psychological problem does Michael still suffer from?
~Anal retention.

`What do Michael and Catholic school nuns have in common?
~Both are a pain in the ass to kids.

`What's the difference between Michael and Connie Chung?
~Michael's been able to have kids.

`What's Michael's favorite dish?
~Creamed shrimp.

`Why's Michael cutting down on public appearances?
~He wants to spend more time with the kids.

`How will they ensure that Michael gets a thorough body search?
~Hire a Catholic priest to do it.

`What will they call the upcoming movie about Michael Jackson?
~"The African Queen."

Michael Jackson and Pee Wee Herman are have come out with a new video called... "I'll beat it for you."

A confused nine year old boy goes up to his mother and asks, "Is God male or female?"
After thinking for a moment, his mother responds, "Well, God is both male and female."
This confuses the little boy so he asks, "Is God black or white?"
"Well, God is both black and white."
This further confuses the boy so he asks, "Is God gay or straight?"
At this the mother is getting concerned, but answers none the less, "Honey, God is both gay and straight."
At this, the boy's face lights up with understanding and he triumphantly asks, "Is God Michael Jackson?"

I think you missed the point. Other than the emergency or public services we offer, any contact whatsoever is an avocation, not a necessity. Therefore, any mode needed to facilitate that would also not be a necessity. If one wants to use code during those periods, one can do so by learning code on his/her own. It is not necessary for the goals and purposes of the Amateur Radio Service at this point to mandate that learning through a testing requirement.

Yeah. You're correct. *IF* you want to give the appearance of being rather archaic in the use of the English Language. I believe an English professor would bear me out that by the use of the word "nor" directly after the word "I" is the proper way in which to construct that sentence. If I am wrong, and I don't think I am, then you are absolutely correct.

>

Good grief, that's miserably constructed and you'd be one of those who would construct a sentence thusly, not I.

Dwight, I am not like that. I can totally dislike someone and totally agree with what they are saying. The *reason* I don't like Larry--or people like him--isn't because of their opinion. It is because of their arrogance and dictatorial style of impression that everyone must think just like them. It is also that, once again, the *impression* is given that anyone who thinks differently than they are somehow of less stature than they.

Whether I agree or disagree with someone has no bearing on how I accept their message. For instance, someone could be exactly of the thought of Larry and preach the thought and I am all for engagement on an intellectual level. But, when someone begins preaching their thoughts while at the same time acting as though they are superior because of them--all I want to is reach out and bitch slap 'em. I can get just as lofty as anyone else on an intellectual level and be very articulate about how I communicate. I can also get down at the level of someone such as Larry if I need to--or just plain want to.

Nope, you are incorrect. I don't care whether you agree with me or not. It is when you start telling me things that depict the nature of a personality *because* of something I am saying that you'll see me pushing back in like manner.

Oooo, I know. I sure am getting short with people lately. Y'know why, I think? It's kind of like all those who are nearly always as good as we can possibly be--at the *expense* of ourselves around all the creeps in this world. I am getting tired of it--and I ain't takin' it no more...

A. I was discussing the USE of code itself not the testing. So the last
two sentences in the above paragraph are not relevant to this discussion.

B. No you missed the point. My point is that if you want to communicate
then code can sometimes be necessary. I was not discussing emergency coms.
I was discussing the pursuit of my hobby. I believe in minimizing the
impact that propagation has on MY choice of when to participate in that
hobby. The "choice" of turning off the radio simply because of not knowing
code is not really a choice and is unacceptable.

I can't think of any circumstances where this sort of thing would or
should be allowed to happen. I would be a prime candidate for a person
losing out on a license. I was interrested in radio when I was in high
school, and got out of it for many years thereafter. If I had recieved
the "learners permit" license at that point, that would likely be the case.

OK, fine.

Then SSB, AM, FM, RTTY, PSK-31, etc. are all non-necessities.

And the same can be said for any particular technologies used by hams.
For example, there is no absolute necessity to use a PLL-type
synthesized rig. It's just an operator choice.

> If one wants to use code during those periods, one can do so by learning
> code on his/her own.

If one wants to use any other mode or technology, one can do so by
learning
it on his/her own.

> It is not necessary for the goals and purposes of the
> Amateur Radio Service at this point to mandate that learning through a
> testing requirement.

Then it logically follows that it is not necessary for the goals and
purposes of the Amateur Radio Service at this point to mandate that
learning through a
testing requirement.

In fact, except for the most basic of rules and regulations, your
argument leads to the inescapable conclusion that it is not necessary
for the goals and purposes of the Amateur Radio Service at this point
to mandate *any* learning through a testing requirement.

Can you prove otherwise?

ACK!!! Man, I am still stunned over this one--I *must* be getting old. The grammar department indeed reminded me of the old "either/neither" "neither/nor" argument to be used in deciding upon correct grammar! So, yes, Larry was correct! Wow, what a hoot! Larry being correct <Big Evil Grin>. However, it was stated that, in a casual conversation, inference is 98% of the communication. Deductive reasoning would lend itself to knowing what was intended to be said (sorry, Jim). I did remind them that I do not consider this venue as much "casual" as I do a debate environment. So, they said in a debate I'd lose points. Consider the points lost.

Anyway, yep, the sentence should have been as Larry stated in the above reposted, reposted, reposted(?) post. All I can say is I am proud to have given Larry the opportunity to be correct *and* intellectual, for

once...<Big Evil Grin> again. What a hoot, eh? Oh wait, upon review, could it look to JJ like I am backpedaling? Hmmm.....nope, don't think so...

Now, back to cooking a fine, fine cook-ahead Thanksgiving dinner that neither I nor anyone could deny being delightfully delicious! ;)

Hans,

Please give me an idea of what freqs you'll frequent. Having just moved into our new QTH, I have nothing substantial really set up yet, however, I'd love to toss a wire up in one of the trees and let the autotuner in the K1 handle the rest. (Don't know if 5 Watts'll do it, but am more than game to try.) Take care and have a Happy Thanksgiving. :-)

Look for W0SOC Friday evening and all day Sunday on whatever bands are open
to DX.

Look for W0AIH all weekend on every band 160-10 (less WARC AND 60M).

But since this is a DX event, WA2SI is a zero-point QSO.

Given some of the things I've read on the internet I'm not so sure that it is a reductio ad absurdum argument. We may actually be heading inexorably in that direction.

I presume YOU mean it is "unacceptable" to YOU. It is perfectly acceptable
to me and many others. It is, clearly, a personal choice and that is as it

should be. It is the type of thing I am Thankfull for on
Thanksgiving...i.e.
we live in a country that allows for such individual opinions and choices.

Cheers and don't eat too much tomorrow :-) burp

>

> I can't think of any circumstances where this sort of thing would or
> should be allowed to happen.

Which thing?

A key part of Hans' idea is that a newbie gets one and only one entry level license (with 10 year term). No renewals, no retests, either upgrade to the full-privs license in the 8 year window between when you have the required 2 years experience and when the license expires, or yer out until ya pass the full-privs exam.

This is kinda like how the old Novice worked. One to a customer, no renewals, no retests for another term. 1951-1967 it was one year, then it was two years, then in the '70s they went through a bunch of changes whose details I won't bore ya with. By 1976 it was same term and renewability as the other licenses.

The idea was that newbies would spend the Novice year or two learning and passing the General or Advanced. Which many, many of us did.

Of course back then someone could just go straight for Tech, General or Advanced. But not Extra - until the mid-70s it required two years' experience as a General or above. (Guess who was at the FCC office the first exam day after the 2 years were up).

Argue it with Hans, not me!

> I would be a prime candidate for a person
> losing out on a license. I was interrested in radio when I was in high

All you'd have to do is pass the full-privs written in that case.

..... it's about the qualifications.

The incessant arguments here on rrap surround the question of whether or not there should be a Morse TEST for access to HF.

Well, that's the wrong question.

The real question is whether or not you should be Morse qualified for access to HF.

If there is no regulatory need for Morse qualification, then there is no need for Morse testing.

The need for Morse qualification, as clearly stated in the 1913 radio regulations was "The applicant must be able to transmit and receive in Continental Morse, at a speed sufficient to enable him to recognize distress calls or the official "keep-out" signals." Since that qualification need has long since disappeared, then so has the need for the qualification test.

HAW! That's a good one!

Doesn't all that mock indignation begin to remind you of Jonathan
Harris' role as "Dr. Smith" on the old TV show "Lost In Space"?

> one, if I could find one in acceptable cond'n.

Personally, as much as I like "certain" older cars (I have several
antiques),
the reality is that today's vehicles are pretty incredible. Better gas
mileage,
far better handling and they do last much longer in terms of total
mileage and/or years of age. My first new car, a 1964 Chevy Impala
convertible with 283 V8 generally got 18mpg. My 2003 Chevy Silverado,
4x4, Extended cab with a 327 V8 gets about 16-17 on average.

The more recent new cars I've owned have all made it well beyond the
150K miles before being sold or junked. Several went 200K+.
The new cars can run at 75mph all day and not falter in the
heat of summer or cold of winter.

Yes, I love the car club and occasional jaunt alone in my '61 Triumph TR-3,
but
it is the time warp element that makes it the fun event...plus the always
positive comments from bystanders at stopping point...that driving the
TR-3 is. For my day-to-day commute, however, I stick to my new
truck.

Happy Thanksgiving to all. If you like it, drive it.

Cheers,
Bill K2UNK

Hello Hans,

Back in the DX frame again and QSLing is one of the hazards. I paper QSL 100% but also upload all my logs to LoTW and eQSL hoping to ease the burden. It isn't helping as I get about a dozen in the mail every day. Just took delivery of 3,000 cards and have shipped out about 500 in a week so probably will need more.

JA's are chronic QSL'ers but hey, they must need the paper or they wouldn't be sending them.

Your engine is too small.

My 2003 Silverado 2500HD turbo-charged 32-valve 6.6L V8 gets around 21-22
MPG on the highway, and 18MPG around town.

But my 1962 Corvair turbo-charged 12-valve H-6 got only around 13 MPG, but
it was a LOT more fun to drive, and the chicks dug it!

Like I originally said....for my daily commute, I'll take the truck.
Give me a nice two lane country road meandering about the hillsides
and I'll take the TR-3 (if it is a nice sunny and dry day). Rain and
the TR (or almost any vintage British sports car) are natural
opposites. :-) :-)

Cheers

I was simply countering the argument that code itself is unnecessary. As long as there are people who do not want to turn off the radio when conditions are poor, code will continue to be necessary for those people. Yes it is unacceptable to me to be so constrained.

Dee D. Flint, N8UZE

So far the only people I see "making fun" of Jim Miccolis are
those who cannot adequately argue the topic being debated, Hans.
There ARE those who make an arguement that the Amateur Radio
license should be nothing more than an expensive permit. It's been
archived here, Hans, and remains an "on-the-fringe" concept, but worse
ideas have made it into law.

As you are well aware, part of the FCC's Basis and Purpose of the
Amateur Radio Service is an expectation of technical learning. We are
effectively eliminating much of the "skill" reqirements, so how hard a
stretch is it to see some element of society arguing to eliminate any
technical knowledge, too...?!?!

Steve, not my fault that Ron said it, and I liked Ron. But his quote
applied in your declaration that amateur radio has not improved since
1984.

That is not fact.

UNQUOTE.

Sorry I missed this before!

Brain, how in the WORLD did YOU come up with the assertion that >>I<< said that Amateur Radio has not improved since 1984...?!?!

You really ARE the idiot I imagined!

Just one more mangled episode of cranial flatulence on your part, Brain. I'm just sorry I missed it the first time, however it's also one more example of why I take great fun in sarcastically calling you "Brain".

Hope you have a Happy Thanksgiving...And by the way, when Mrs Brain says something like "It's time to carve the turkey", don't sweat it...she's talking about the bird on the table...not the one sitting next to her...

Way to go, Lennie...Ate up 90 lines of bandwidth to make a one
sentence reponse to which the quoted material offered nothing.

> The requirement to exist in this chat room requires a struct obediance
> to morsemanship, tradition forever rooted in old ways back before all
> the morseodist regulars ever existed.

And again you demonstrate your persistent ignorance.

This is NOT a chat room. YOU'RE supposed to be Mr Technology...I
thought you'd at least try to be a LITTLE right once in a while.

> >However, ham radio is not a job or a vocation, just a hobby.

More ignorance, exacerbated by lack of practical experience.

> In this chat room, the REGULARS maintain a LIFESTYLE of devotion,
> obediance to love honor and obey amateur radio in all its past glory.

And CURRENT "glory", Lennie.

One that you are not part of parcel of.

> LIFESTYLES take precedence over logic, common sense, and
> anything else not associated with amateur radio (except Michael
> Jackson, foreign policy, overall economic decisions by government
> and partisan politics).

If YOU were to actually exercise ANY "logic" or "common sense",
you'd not keep making a fool of yourself in a public forum.

However pathological liars and antagonists are hardly ever
accused of being "logical" or possessing any "common sense".

Surely YOU haven't.

> Ham radio to the regulars is far more than a vocation. Vocations
> in radio are to be pejorated, denigrated, spat upon, reviled, made fun

> let it hit your ass on the way out!"

More profanity, Lennie...?!?! The only way you can make your
"point" anymore?

And as for Alun's comments, the "unmotivated" are not going to
get an Amateur Radio license, code test or not.

Take yourself for example...

> THIS venue is the chat room homies' TURF, Alun. Territorial imperative.

What chat room?

> None can venture into this place unless they are of Groupthink,
> secure in their Beliefs of the Group.

Having a vested interest and some practical experience prior to
making the silly suggestions you offer might help, Lennie...But you
ARE in teh Serious Screwball Mode.

> >The notion that only hams should decide the future of ham radio is just
> >that, a notion.
>
> NOT here. This is morseodist TURF, their neighborhood. NONE may
> challenge morseodist groupthink. NONE.

The only people who SHOULD have a "notion" to change ANYTHING in
our society should fall to those who would be impacted by it, whetehr
we are talking Amateur Radio, Medicare, or putting speed bumps in a
subdivision.

> >I can absolutely guarantee that it is not a point of view
> >shared by the FCC, and it makes little sense to me either.
>
> Heresy.
>
> All know that ham radio is governed by the BoD at Newington.

Oh? I would ask you to again produce some verifyable validation
of this assertion, but since it was just an antagonistic swipe at
something you so revile anyway, why waste the time?

The pile of questions you have refused to answer in response to
YOUR assertions is already neck-high.

> So it shall always be.
>
> Amen.
>
> dit dit

Another LennieRant...and just before Thanksgiving...How
thoughtful.

Putz.

Nelson is one of the kids on "The Simpsons". He's the one that shows up
at odd times to mock one of the other characters when something doesn't
go their way. Uses kind of a nasal ha-haw sound. Best experienced, not
described!

>>>Now that I think about it, acceptance of noncurrent experience would

> Which thing?

getting locked out of the ARS. Let's say I got my license in 1970, when
I was in High school. It would have expired in 1980. My interest in the
ARS did not come back until 1999. If I couldn't take the test again
because it had expired......

> A key part of Hans' idea is that a newbie gets one and only one entry

> or yer out until ya pass the full-privs exam.

But now this is slightly different than noted above. Here a ham could
presumably get their license later. Even so, in my case, I would
probably want to re-test at the lower level, since radio has changed a
bit since the late 60's - early 70's.

Note this is all hypothetical, as I didn't have a license then.

> This is kinda like how the old Novice worked. One to a customer, no

>
> All you'd have to do is pass the full-privs written in that case.

Which still brings us back to how much radio changes over a ten year
period. A ten year forced upgrade is simply over too long a time period
- not that I like the idea at all.

What would it accomplish?

3317. FCC'S Wireless Bureau announces reorganization

Newsgroup: rec.radio.amateur.policy
Date: 2003-11-27 01:26:47 UTC
From: johnbartley@email.com
Message-ID: <f90c7f43.0311261726.2dc1be2f@posting.google.com>

November 24, 2003
FCC'S WIRELESS BUREAU ANNOUNCES REORGANIZATION
FOR IMMEDIATE RELEASE
NEWS MEDIA CONTACT: Chelsea Fallon at (202) 418-7991

FCC'S WIRELESS BUREAU ANNOUNCES REORGANIZATION Washington, D.C. ï¿½ The Wireless Telecommunications Bureau (Bureau) announced today that it has realigned its organizational structure to more effectively support the FCC's strategic goals ï¿½ Broadband, Competition, Spectrum, Media, Homeland Security and Modernizing the FCC.

The Bureau's portfolios have been redistributed along the lines of the strategic goals, consolidating similar functions to focus resources better. While improving the Bureau's ability to fulfill its mission, the reorganization also provides several benefits for managing a large and diverse organization. The scope and size of the Bureau's larger Divisions are reduced to improve managerial oversight, and organizational substructures, such as separate branches under the Division level, are eliminated. Eliminating branches provides each Division's management with greater flexibility to employ resources and create teams to address specific issues and projects. The overall result is a flatter, more flexible organization that the FCC believes will be more responsive to changes in wireless technology and the telecommunications business environment. The reorganization does not add or remove functions from the Bureau's portfolio.

From a personnel standpoint, the reorganization has been accomplished through the redeployment of existing positions. "This reorganization provides the Wireless Bureau with a structure to address the dynamic challenges facing a 21st century regulatory agency," stated John Muleta, Chief of the Bureau. "The result is a mission-driven team that will be innovative in its approach to regulatory policies and customer service."

As part of the reorganization, the Bureau now includes the following six Divisions:

o Auctions and Spectrum Access Division ï¿½ Promotes transparent, efficient and effective access to spectrum, through the development of policy initiatives and legal analysis, as well as procedures and administrative capability, to implement the FCC's competitive bidding authority and the transition of spectrum to new and innovative uses. Addresses issues relating to statutory authority and objectives, Commission rules and policies, and the planning, design, and conduct of spectrum auctions. Margaret Wiener, formerly Chief of the Auctions

and Industry Analysis Division, will be the Division Chief.

o Broadband Division ï¿½ Facilitates the rapid, widespread deployment of wireless broadband services to rural and metropolitan areas. Consolidates the policy, regulatory and licensing functions for wireless broadband services, excluding public safety and critical infrastructure services. Joel Taubenblatt, formerly Deputy Chief of the Policy Division, will be the Division Chief.

o Mobility Division ï¿½ Promotes competitive and innovative mobile radio services and maximizes efficient use of the mobile radio spectrum. Consolidates the policy, regulatory and licensing functions for wireless mobile services, excluding public safety and critical infrastructure services. Roger Noel, formerly Deputy Chief of the Commercial Wireless Division, will be the Division Chief.

o Public Safety and Critical Infrastructure Division ï¿½ Consolidates wireless homeland security and public safety issues and outreach within one Division, including E911 and interoperability issues, as well as policy, regulatory and licensing functions for both public safety entities and the nation's critical infrastructure industries. D'Wana Terry, formerly Chief of the Public Safety and Private Wireless Division, will be the Division Chief.

o Spectrum and Competition Policy Division ï¿½ Formulates and implements innovative spectrum, competition, and infrastructure policies that promote access to and efficient use of radio spectrum for wireless telecommunications and encourage competition in the communications marketplace. Issues include Spectrum Policy Task Force implementation, wireless/wireline convergence, secondary markets, wireless consumer policy, competition reporting, facilities and tower siting, and broad policy guidance for future technological developments. William Kunze, formerly Chief of the Commercial Wireless Division, will be the Division Chief.

o Spectrum Management Resources and Technologies Division ï¿½ Combines the bureau's information technology, licensing support, and auctions support and outreach functions (currently divided between two Divisions) in order to improve planning and implementation of the Bureau's unique and highly integrated system needs. John Chudovan, formerly Chief of the Data Management Division, will be the Division Chief.

The reorganization of the Bureau was approved by the Commission November 13, 2003. An organizational chart reflecting the realignment of the Bureau is attached. Future information concerning overall implementation, division leadership and specific responsibilities will be periodically updated on the Bureau's web site at wireless.fcc.gov. ï¿½ FCC ï¿½

True, although I think a large number of those would just simply not
renew their licenses.

Wasn't "Continental Morse" the contemporary name for what we now
call "International Morse", as distinguished from "American Morse" ?

In this case, as in the case of the original Novice "learners permit", renewal would not be allowed. My plan is much more generous, giving the novice a 10-year period to qualify as opposed to the 1-year term of the original Novice license.

Dear Judges, Lawyers, Policemen, Guards, Counselors, Taxpayers, et. al.,

We are here. Like it or not, for good or bad, we are here. Who are we? We are the downtrodden and dispossesed, the self-torturing, the disenfranchised convicts, drug and alcohol addicts, the unemployed and unemployable. We are the children of poverty, financial and spiritual. We have and will have children of our own, grandchildren too. We are ex-cons, uninsured, homeless, of many colors and speaking many tongues. We are the enemy in what has become a domestic war against ourselves.

And who are you? You who like the tough talk of Tough on Crime? You who watch as budgets are cut in education and health care while you militarize a police force? Bullet-proof vests, automatic weapons, helicopters, tanks, robots ... the testosterone is oozing through the streets, more prisons, longer sentences, tighten the belt, spartan conditions, task forces, gang units, gun courts. And what is there to show for it? Unemployent stays low because half the population oversees those "out of the workforce", the dregs, the rabble, the enemy? Please tell me there is a deeper reason. Do you feel safer? More humane? More like a cohesive society with a shared sense of purpose, who can identify Us and Them? Do you live in a gated community or gentrified neighborhood? By the way, have you read the Declaration of Independence and US Constitution - or do you only know the first phrases?

It's about time we got together. Please know that I have yet to meet a convict who wants their child to be a thief, an addict, a dealer, a prostitute, or a violent individual. Most of us still have hope for ourselves even when stuck in the darkest dilemmas, ruts and catch-22s. Most of us believe in crafting laws and instilling order. Many of us have burrowed beneath the surface to find a spiritual sense of being, an understanding force at least as powerful as those we succumbed to, and many of use wouldn't escape if you opened the front door. Did you know that approximately 10 million Americans are either incarcerated, on probation, on parole or once were in those categories? Each of those 10 million have families, friends, neighbors ... and so closer and closer does the We interface with the You. Don't you think it's time we talked?

Are you ready? Can you accept that the road we are travelling points toward a grim and painful future? Do you have the heart to face monumental failures while bravely struggling beyond where we are now? I know that some of you are, and that some of us are, and this is what gives me hope. You need our insights just as we need your structure. It is never over, especially when a real solution, a real treatment for our sickness, is yet to begin.

In Solidarity,

Bruce Reilly (a.k.a Bruha)
P.O.Box 8274
Cranston, RI 02920 USA

P.S. - I am trying to conceptualize an effective guerilla media campaign to promote this cause. Ideas are welcome. Collaboration is prayed.

do not use a world-wide newsgroup!
Messages in misc.misc that say "This is a test" are likely to cause large numbers of caustic messages to flow into your mailbox. There are newsgroups that are local to your computer or area that should be used. Your system administrator can tell you what they are.

Be familiar with the group you are posting to before you post! You shouldn't post to groups you do not read, or post to groups you've only read a few articles from -- you may not be familiar with the on-going conventions and themes of the group. One normally does not join a conversation by just walking up and talking. Instead, you listen first and then join in if you have something pertinent to contribute.

Remember that the Usenet newsgroup system is designed to allow readers to choose which messages they see, not to allow posters to choose sets of readers to target. When choosing which newsgroup(s) to post in, ask yourself, "Which newsgroups contain readers who would want to read my message" rather than "Which newsgroups have readers to whom I want to send my message?"

Be Careful with Humor and Sarcasm.

Without the voice inflections and body language of personal communications, it is easy for a remark meant to be funny to be misinterpreted.

The very best thing about European sports cars (including the British ones) is that they're just agile enough to get you out of trouble when you've done something stupid, like overestimated the car's, or your own, abilities. Many years ago, I went though an intersection at about 85 mph (the stupid part) in an MGB convertible. It was a narrow two lane road crossing a four lane highway, the road didn't go straight through the intersection (the road other side of the intersection was offset by about twenty feet), and, very much to my surprise, the middle of the intersection was considerably raised.

If I went straight though the intersection, I'd end up in a farmer's field about twenty feet lower than the road's surface. If I overcompensated, I'd hit the cars waiting on the other side. I had no doubts I could make the slight twist in the road. What I didn't count on was the hump in the middle of the intersection - hardly noticeable at normal speeds, but, at 80 mph, enough to almost launch the car into the air.

As I went through the intersection, I hit that hump and felt the car shoot into the air. I turned the steering wheel and the front tires simply squealed. The farmer's field got a lot closer than I wanted. The car dropped, the front wheels grabbed, and I was sliding sideways (straight towards the cars on the other side). The car bounced into the air again. I turned the steering wheel the opposite direction and the front tires squealed again. The car came back down, the wheels gripped, and I slid sideways into the lane I was supposed to be in. As the sliding stopped, I was able to straighten out and continue on down the road.

During all that, as I shot past one of the cars waiting at the intersection in the other lane, I got a quick glace of a smiling driver clapping his hands. I, on the other hand, was not exactly a happy camper at that particular moment (terror springs to mind). I never tried another stunt like that. Any more playing around would be at a much safer location, under much more predictable conditions. But I never got over my amazement of that car's ability to handle the road.

I'm not that impressed either. My V-6 Ford Explorer Sport will tow a 5000 pound travel trailer. I tow a 4000-4500 pound boat several times a week. The main problem is the short wheelbase, not engine power. But, while the short wheelbase isn't so hot on the open road, it's perfect for getting around town at slower speeds in traffic (and getting the boat into the water fast at smaller, out of the way, boat ramps). But, to be fair to Bill, he did say including mountains. My V-6 clearly isn't going to handle mountains very well with that type of load and the gas milege will certainly reflect that.

> Has no problem pulling my 9,500 pound 5th-
> wheel camper AND my 2,500 pound boat

> NM, AZ, etc.

Now a 9500 pound 5th-wheel is impressive. The only vehicle I've owned that could handle that type of load was the Ford F-250 extended cab diesel pickup I had before this vehicle. It supposedly could tow 11000 pounds, though I never pulled anything close to that weight.

Well, that doesn't always come across so clearly in what you post in the newsgroup. We can't read your mind, only your words. And, in those words, I often see you giving as much as you get. Larry does like to throw punches at you, but I've seen you throw a few at him too. At this point, which one started first is somewhat hard to determine. Instead, most simply go with whatever is being said at the moment.

Hans,

If you want people to quit making fun of you, quit posting such laughable reductio ad absurdum arguments.

That stated 1913 need for Morse code qualifications is not the only reason such qualifications were kept in the rules all these years. There are lots more.

The original 1913 reason for technical qualifications was to prevent interference to nonamateurs caused by improper adjustment of amateur transmitters.

How much interference to nonamateurs is caused by improper adjustment of amateur transmitters today? Reading the FCC enforcement letters, such interference today seems to be more a case of intentional modification of amateur equipment by a lawless few to operate on nonamateur frequencies.

As anyone who understands formal logic knows, reductio ad absurdum is a valid way of evaluating the validity of an assertion.

It works like this: An assertion is analyzed by logical methods, and if the result is an absurdity, the original statement must be false.

> So far the only people I see "making fun" of Jim Miccolis are
>those who cannot adequately argue the topic being debated, Hans.

That says it all right there, Steve. Ridicule the messenger rather than deal with the message.

> There ARE those who make an arguement that the Amateur Radio
>license should be nothing more than an expensive permit. It's been
>archived here, Hans, and remains an "on-the-fringe" concept, but worse
>ideas have made it into law.

Yup. And the way it's being done is a little step at a time - just like other requirements were eliminated. Like nonrenewable entry level licenses, tests conducted by the FCC from a nonpublished test pool, experience requirements, etc.

> As you are well aware, part of the FCC's Basis and Purpose of the
>Amateur Radio Service is an expectation of technical learning.

Of course. But does that mean *all* hams must be *forced* to do some, just to get the license? Can't technical learning stand on its own merits without a Federally mandated welfare/support program?

Part of our B&P is public service comms, but there's no requirement that hams learn how to do them or participate in them to get or keep a license.

>We are
>effectively eliminating much of the "skill" reqirements,

I think you mean "all"...

>so how hard a
>stretch is it to see some element of society arguing to eliminate any
>technical knowledge, too...?!?!

More important - how can those arguments be countered?

Hey Steve, you are quoting ME saying that:

"The ARS has improved since 1984. That's plain for everyone to see."

And that's plain for everyone to see.

Happy Thanksgiving to you. I hope you are with your loved ones today
and give thanks for what you have, and for the system of government
that enables you to have it.

God bless GW Bush, Ron Reagan, and the troops deployed to hotspots the
around the world. The world is a better place because of them and we
cannot lose the faith.

I hope John Hinkley is eating institutionalized turkey cubes, canned
gravy, and instant mashed potatos on this thanksgiving day (such as
the meal I had in 1979), and that his parents have to come back
tomorrow during normal visiting hours to see him.

Writing is something I greatly enjoy, Kim. As written, your sentence, without the reference to others, basically says "it's a pretty near given that I would find anything like the death of someone else "hilarious."" Clearly, something else is needed to change that to fit your intent (for example, "...I would NOT find..."). With your reference to others, the missing "neither" is necessary (the basic "neither/nor" grammar rule, as in "neither I nor others would find").

Hmmm, not only no, but hell no. I can be treaded on all "they" want. I've declared war on the road, tell ya that. I travel a good number of miles to work. And, it's so bad "out there" that when I do 70-75 (in a 60 zone), there will be creeps that pull up behind me and start this moving to the left so they're on the shoulder and can see the traffic around the front of me; or flashing their headlights so I'll move outta "their" way; or pulling up so close that all I see of their lights behind me is a halo because they're only about 2' distance from my rear bumper. Or, they'll do the ultimate stupidity and pass then pull into the spot that I have created in front of me so that they can start leapfrogging from one lane to the next. Well, used to be I'd move. No more. I sit right there. And, they still go around but now I creep up just ever so slightly (still maintain a safe distance from the vehicle in front of me) and see if they'll still dare slide in. Well, sometimes they do. So, since they've usually been behind me flashing their headlights, I'll go the lazy man's route and just leave mine on high beam--and I've got some bright lights.

Then, there's the folks in the store. You'll know who I'm talking about here. The folks who walk up behind you and have a couple of things in their hands and start practically doing calisthenics (sp) to careen in front of you so you'll see they only have a couple of things and let them go ahead. Used to do that, too. No more. It's my turn dammit and they can wait. Now, don't get me wrong: if I happen to turn to one side or the other and I notice someone patiently waiting their turn, I let them go ahead. But these

creeps who think that they are entitled to getting around just because they are far more important than anyone else...nope, not doin' it any more. And, depending upon how showy they are about how important they are is how slow I am to slowly unload my cart, slowly find my checkbook, confirm the price however many times it needs confirming, very carefully write my check, etc.

Or, the teeny-bopper eh-heh couple that thinks everyone wants to see them practically making love in public. If we are all in a line at a store or something and I see another person who is as dismayed by this as me, I'll say something like, "thank goodness for birth control." The other person will usually say something back (having just *waited* for the opportunity) like, "doesn't look like they use it." Or some such thing. For some reason, *that* is when these creeps get embarrassed.

Then, there's what I call the "buddy" creeps. The philosophy is to shop in pairs and have one stand in line while the other keeps going back and getting things that were "forgotten." And, the one standing in line will keep turning and saying please excuse us...<giggle>. I used to just throw a fake smile. Not any more. Now I say, "no, I won't excuse you, you are holding all of us up here and it's rude and inconsiderate of you."

And restaurants. Oh my goodness how many times have you been at an eatery, only to have some creep's misbehaving little future creep keep popping up over the booth seat to let out a shrill of a scream with laughter right behind--over and over and over again...or let the little tyrant run rampant while the beautiful couple (yeah right) sits and eats in peace while their monster runs to every table standing there like you're supposed to applaud them or something. I used to grin and bear that, too. Now, I get up, and I'll actually say something to the parents about how disruptive their "child" (term used loosely) is being to everyone else's table--so can I sit at theirs. That one there gets real sneers. Ask me if I care. They don't, I ain't gonna.

Well, as I've been doing this more and more over the past 5-6 months or so, I am also noticing that there are others doing this. I don't know that it's always been done by others and I've just never noticed, but I notice that there *are* others who are doing it. I am refreshed by that. I am tired of always being the friendly, patient, kind one--just to keep getting stepped on by the creeps...

Maybe we've all had it... <grin>

Since the uninterested would generally let it lapse anyway, it's not worth the effort to change to change the rules to have a 10 year non-renewable "learner's permit."

My response was to your statement that code itself was unnecessary and I made that clear that I was addressing that issue only. You elected to attempt to take it back to the code test. Taking it back to the code test does not refute the necessity of code itself.

Absolutely. Which is exactly why there is no test of the actual ability to use those modes - only a written test covering the fundamentals of those modes and the rules associated with them. Morse code should join those modes in that regard.

What is there to prove? Isn't that exactly the intent of the license exams - the fundamentals of radio and electronics, safety, rules and regulations, and so on. When it comes to Amateur Radio, the FCC is not a school and nobody graduates with a degree in radio or electronics when they're handed a ham license. That license exams (and licenses) are simply entrances into the various levels of Amateur Radio - the real learning comes with what is done afterwards (operating, building, experimenting, reading, practice, and the resulting experence from any or all of that). The FCC has never has never purported, or even suggested, that the Amateur Radio exams, and resulting licenses, are anything beyond that (only a few self-important hams have done so).

Well, we can all react to the world as we wish. I find that a rude reaction to rudity just validates all the rudity. Of course we can't be all well mannered all the time, but IMO, its best to try. Grace is a habit. And the best revenge is living well.

Learning is part of the basis and purpose of the Amateur Radio Service, not the basis and purpose of the license exams. The basis and purpose of the license exams is to make possible the basis and purpose of the Amateur Radio Service. In other words, to bring people into the Amateur Radio Service so they can learn. The real learning comes after the exams in what we actually do.

Dee,

It's not just about "interest" but about "qualifications".

Hans thinks that *all* hams should be qualified (eventually) at at least the Extra class written level. The purpose of his proposed LP license is to give newbies a sample of what ham radio is like, and a 10-year opportunity to learn enough to get a full-privileges license. Just like the old 1 and 2 year one-to-a-customer Novice licenses did.

IOW, upgrade or leave the amateur bands. Hans' proposal is that simple. LPs would have an 8 year window of opportunity to do so.

Part of the concept is the idea that if somebody can't hack the Extra test - for whatever reason - before their 10 year LP license runs out, too bad, game over, thanks for playing. Of course at any future time after the LP license runs out, such a person could take the Extra written and get the license.

The idea is that "LPs" are not really qualified hams - the license class would exist so that they could become qualified.

Of course the only difference in privs would be power level - LPs would be limited to 50 watts out. No word on vanity calls, tho.

IMO, the only way to counter them is to attempt a consensus of just how much "quality" and technical acumen is desired in a Ham. It's what you and I are doing yapping about what Ham radio might become. It's what Hans is doing. I don't like everything he proposes, but I could live with it.

We have to bark about every attempt at reducing the knowledge or skills needed to become a Ham. We need to also guard against trying to set the bar too high - though I doubt that that will be much of a problem!

When a VEC group publishes what they want the ARS to become, and what they want is a drastic reduction in knowledge, at the same time granting priveliges for that reduction, we have to yell loud and strong.

We have to realize that when we are told to shut up, it means that our arguments are good, and that "shut up" is the best argument the other side has to give.

We have to realize that while we may lose this fight no matter how hard we work at it, if we sit still and shut up, there is no doubt of the outcome. Entropy will take over.

We have to get those that believe that Morse code testing should go away to realize and admit that something must fill the vacuum created by its elimination. That something could be *nothing*, which results in a dramatic reduction in skill level. They also need to realize that there are people out there who want even less in the way of admission requirements. "Nobody wants licenses just given away" or the like is a naive statement.

Why? Because I could hand my wife the checkbook, turn her loose in AES or similar store, and after purchasing whatever the clerk reccomends, within a week or two she could be on the air. There really is no impediment too a person whose extent of rf knowledgfe is that you recieve by twisting the knob, and to transmit, you push the push to talk button. There is no technical requirement any more, at least to simply "get on the air". We have to generate our own requirements.

The code test is part of it, but overall it is about many of the technical issues that will shape where the ARS goes in the future.

A problem with any new technology (credit cards are simply a financial technology) is that new forms of thinking and acting have to be developed by those who use the technology.

In a cash-only environment, I cannot spend money I don't have yet. With checks, I can sometimes play games with 'getting to the bank before they do', but that's pretty limited. With true credit cards, a new level of thinking and discipline are needed to avoid digging oneself into a hole.

I think of credit cards as "instant debt" cards, which helps me avoid using them! Instead, I use debit cards.

The "human nature/psychology" factor is a real thing, though. It's a different thing to count out several hundred dollars in cash and hand it over, compared to simply flashing the plastic.

Only if you allow it to "trap" you. Charge only what you can pay off at
the end of the billing cycle. It is really stupid to pay the interst on
a credit card. I see my credit card as a handy way not to have to pay
cash or write checks and have a good record of my purchases, but *never*
go into debt with it, always pay the full balance. If you can't pay the
full balance you are buying more than you need.

DOS tip: The FCC determines what it requires in licensing of radio
operators, NOT the "amateur community" or the "communities" of
any other radio service that require radio operators.

> We have to bark about every attempt at reducing the knowledge or skills

>needed to become a Ham. We need to also guard against trying to set the
>bar too high - though I doubt that that will be much of a problem!

You can always petiiton the FCC for a complete change in scope and
description of U.S. amateur radio. I'd suggest you change the name to
"Archaic Radiotelegraphy Service" for below-30-MHz. Make morse the
prime definition of HF amateur radio.

> When a VEC group publishes what they want the ARS to become, and what
>they want is a drastic reduction in knowledge, at the same time granting

Has anyone seen YOUR opposition to a "VEC group publishing what
they want?"

> We have to realize that when we are told to shut up, it means that our
>arguments are good, and that "shut up" is the best argument the other
>side has to give.

Don't try to rationalize a weak argument of yours as "more noble, logical,
in the best interests of the service," etc., etc. by feigning outrage at
"improper acts of others."

> We have to realize that while we may lose this fight no matter how hard

>we work at it, if we sit still and shut up, there is no doubt of the
>outcome. Entropy will take over.

Don't worry, 981 commenters on RM-10811 (largest number of respondents
of the 14 petitions) have been busy stating things in public.

> We have to get those that believe that Morse code testing should go
>away to realize and admit that something must fill the vacuum created by
>its elimination.

WHY?

You are just about to fall over the edge of the "I had to do it so everyone
else has to do it in the future" non-argument.

>That something could be *nothing*, which results in a
>dramatic reduction in skill level.

"Dramatic?!?!?" Only if you are a morseman is such a thing "dramatic."

:-)

>They also need to realize that there
>are people out there who want even less in the way of admission
>requirements. "Nobody wants licenses just given away" or the like is a
>naive statement.

Translation: You had to do something but if others in the future
don't do as you did, they are getting something "free?"

> Why? Because I could hand my wife the checkbook, turn her loose in AES
>or similar store, and after purchasing whatever the clerk reccomends,

>"get on the air". We have to generate our own requirements.

Okay, begin with some fundamentals:

1. A radio boot camp where all "novices" have to learn to take orders from their "superior" license class holders, march in ranks to beep music determined by long-ago-dead-amateurs, know vacuum tube lore by heart, learn how to memorize all the radio ads in QST and desire each item.

2. Swear an oath of allegiance to amateur radio and the constitution of the ARRL, salute each vertical diamond logo as it passes in front of your eyes. Loyalty, fraternity, etc.

3. Wear cute little radio uniforms when operating, have shiny radio shields in a special holder giving you "authority" anyplace. Uniforms are a good place to show RANK and TIME IN GRADE while "in the (radio) service."

4. Demand immediate obeyance by all "civilians" not in your "service" as superior in the radio arts. Reject all those who do not think as you do. Remember that the First Amendment of the United States Constitution does NOT apply to citizens on amateur radio matters...unless said citizen is licensed in amateur radio.

5. Petition the FCC for an immediate change of the HF amateur radio service to "Archaic Radiotelegraphy Service," or perhaps "Archaic Radiotelegraphy Society." That way you can keep the beloved code test and force all in the future to do exactly as you had to do.

6. Always remember that YOUR efforts in getting that amateur license were so awesome, overpowering, enobling that the individual efforts of mere "civilians" not into amateur radio are forever poor and puny by comparison.

7. Amateurs RULE. Professionals must obey the amateurs.

The CODE TEST is a MAJOR PART of every one of the 14
petitions before the Commission [RM-10781 thru RM-10787,
RM-10805 thru RM-10811].

Everyone's future happens right after now.

Incorrect. The necessity for tested demonstration of morsemanship FOR
LICENSING of any radio operator, any radio service, has disappeared in
the 90 years of time since 1913.

>That stated 1913 need for Morse code qualifications is not the only reason
such
>qualifications were kept in the rules all these years. There are lots more.

Not to the FCC.

In 1913 (or 1912) there was ONLY on-off keying of so-called CW
RF sources. Despite the Fessenden demonstration of 1906 on
Christmas Eve (done with an ALTERNATOR RF source, NOT a
"spark" transmitter), there was no great rush for establishment
of sound/voice transmissions. TTY was just getting started in
replacing landline manual telegraphy, no facsimile or other "data"

sources. Vacuum tubes were barely out of the laboratory after
5 years from invention...makers were still trying to get good QC in
the "tube factories."

>The original 1913 reason for technical qualifications was to prevent
>interference to nonamateurs caused by improper adjustment of amateur
>transmitters.

Baloney. IMPROPER OPERATION, not "adjustment," and not
just "by amateurs."

Were there bandplans in 1913? I don't think so. Were there any
specific frequencies (wavelengths) assigned then for everyone in
radio? I think not, but you will no doubt explain away "how it was"
from personal experience in 1913. :-)

The exile of U.S. radio amateurs to the "short waves" (shorter
than 200 m) came AFTER World War 1, not before.

>How much interference to nonamateurs is caused by improper adjustment of
>amateur transmitters today? Reading the FCC enforcement letters, such
>interference today seems to be more a case of intentional modification of
>amateur equipment by a lawless few to operate on nonamateur frequencies.

In 1913 there was NO Internet to contact the FCC. There wasn't any
FCC until 1934. There was very little landline long-distance telephony
to contact the three different radio regulatory agencies that existed
between 1912 and 1934. "Communications" with any radio regulatory
agency in 1913 was by surface mail...or the "telegram" (a new term
for the mostly-manual-telegraphic message sent via landlines).

So, in the world of today (if you can tear yourself away from the
beloved past), HOW is a continuing requirement of a morse code test
going to "stop" all that improper radio operation?

Answer: It won't. Improper operation isn't due to the mode. It isn't
due to the presence or absence of a code test.

I use a different approach completely in stores. I call it the CQT (Cuteness Queueing Theory) method. Works like this:

Whenever you're in a store that has two or more checkout lines, choose which line to be in by how attractive/cute/sexy/whatever the checkout person is. Doesn't matter how long the line is - get in the line with the checkout person you find most attractive. For some reason, that line always seems to move the fastest.
>
>Or, the teeny-bopper eh-heh couple that thinks everyone wants to see them

>will usually say something back (having just *waited* for the opportunity)
>like, "doesn't look like they use it." Or some such thing. For some
>reason, *that* is when these creeps get embarrassed.

I like that! Here's another, copied from the "Seinfeld" episode, but you have to be with your SO to do it. Simply start talking all sweet to each other (the episode had Jerry and his girlfriend calling each other "schmoopie"). Folks of our age look ancient to many kids that age, and when we behave that way it drives them nuts. Of course, it takes some discipline to keep a straight face while calling each other "Bunny" and "Huggybear" and such, plus you hafta have the right person with you to do it at all.

>Then, there's what I call the "buddy" creeps. The philosophy is to shop in

treaty requirement went away?
>
> In 1913 (or 1912) there was ONLY on-off keying of so-called CW
> RF sources.

No, that's not true at all.

Spark transmitters were not CW sources - they generated damped (modulated)
waves.

> Despite the Fessenden demonstration of 1906 on
> Christmas Eve (done with an ALTERNATOR RF source, NOT a
> "spark" transmitter),

Fessenden demonstrated voice modulated spark operation as early as 1900. His
methods have been verified by actual tests using replica transmitters and dummy
loads.

Fessenden had a two-way transatlantic radiotelephone setup in operation by
November of 1906 using alternator RF sources.

The demo of Christmas Eve 1906 was repeated a week later (New Year's Eve).

These events are well documented.

I wasn't there. Neither were you. But I obviously know far more about how it was than you do, Leonard.

Do grow up a tiny bit and accept correction like a man, rather than a spoiled child who cannot bear being told he is wrong. ;-) ;-) ;-) ;-) ;-)
>
> The exile of U.S. radio amateurs to the "short waves" (shorter
> than 200 m) came AFTER World War 1, not before.

On August 17, 1912, a new radio law was signed into law by President Taft. It had been passed by the Senate on May 12 of that year and by the House on August 9.

This bill, a revision of the earlier Alexander Bill, required that:

- all transmitting stations be operated in accordance with licenses granted by the Department of Commerce (a Federal agency)

- all operators of transmitting stations be licensed

- every station designate a normal operating wavelength below 600 or above 1600 meters

- ship stations were designated 450 to 600 meters

- amateur stations use wavelengths not exceeding 200 meters, and transformer power not in excess of 1 kW

- special exceptions to the rules could be authorized by the Secretary.

The professionals of the day said that the long-distance effectiveness of waves decreased as the wavelength decreased, so the longest wavelengths were

generally assigned to the longest distance services. Amateurs were assigned the thought-to-be-worthless-for-DX wavelengths shorter than 200 meters. Most amateurs clustered on or near 200 meters because they believed the erroneous theories of the professionals.

The above is all well documented.

>>How much interference to nonamateurs is caused by improper adjustment of
>>amateur transmitters today? Reading the FCC enforcement letters, such
>>interference today seems to be more a case of intentional modification of

>
> In 1913 there was NO Internet to contact the FCC.

So what?

How much interference to nonamateurs is caused by improper adjustment of amateur transmitters today?

> There wasn't any FCC until 1934.

So what?

There were regulatory predecessors to the FCC all the way back to 1912. They had licenses, tests, radio inspectors, callsigns, the works. The Department of Commerce performed those functions back in 1913.

> There was very little landline long-distance telephony
> to contact the three different radio regulatory agencies that existed
> between 1912 and 1934.

So what?

> "Communications" with any radio regulatory
> agency in 1913 was by surface mail...or the "telegram" (a new term
> for the mostly-manual-telegraphic message sent via landlines).

Of what import is any of this?

How much interference to nonamateurs is caused by improper adjustment of amateur transmitters today?
>
> So, in the world of today (if you can tear yourself away from the
> beloved past), HOW is a continuing requirement of a morse code test
> going to "stop" all that improper radio operation?

You obviously misunderstand what I wrote, Leonard. The adjustment/operation discussion is about the need for written tests.
>
> Answer: It won't. Improper operation isn't due to the mode. It isn't
> due to the presence or absence of a code test.

Then why do so many FCC enforcement actions against amateurs involve amateurs using voice modes, and so few against amateurs using Morse code?

The discrepancy far exceeds the difference in mode popularity.

Why is such a written test necessary? The use of any of those modes is entirely optional.

>Morse code should join those modes in that regard.

We'll have to agree to disagree on that.

>> In fact, except for the most basic of rules
>> and regulations, your argument leads to the
>> inescapable conclusion that it is not necessary
>> for the goals and purposes of the Amateur
>> Radio Service at this point to mandate *any*
>> learning through a testing requirement.
>>
>> Can you prove otherwise?
>
> What is there to prove?

Prove the necessity for a written test beyond the most basic rules and regulations.

For example, Technicians are allowed to use all authorized modes on the six meter band at up to 1500 W output. This includes all modes allowed on the HF/MF bands. Therefore, the Technician test must, by definition, be adequate to insure that those who pass it are qualified on all authorized HF/MF modes and the use of transmitters up to 1500 W output on six meters MHz.

Since the hazards of RF exposure on HF/MF are less than those on 50 MHz, and the modes authorized on HF/MF are a subset of those authorized on six, it logically follows that those who pass the Tech test are *mostly* qualified to operate HF/MF. The exceptions are those few things which are specific to HF/MF, such as propagation.

But the General and Extra writtens go far beyond HF/MF propagation in their technical material. Why is that stuff necessary?

>Isn't that exactly the intent of the license
>exams - the fundamentals of radio and electronics, safety, rules and
>regulations, and so on.

Sure. The basics. So prove why the tests must go beyond those basics.

>When it comes to Amateur Radio, the FCC is not a
>school and nobody graduates with a degree in radio or electronics when
>they're handed a ham license.

That's right.

And nobody with a degree is handed a ham license either.

>That license exams (and licenses) are simply
>entrances into the various levels of Amateur Radio - the real learning comes
>with what is done afterwards (operating, building, experimenting, reading,
>practice, and the resulting experence from any or all of that).

Sure. So what's the point of all that written testing? Why is a General
qualified to use 1500 W on 14,026 kHz but not on 14,024?

>The FCC has
>never has never purported, or even suggested, that the Amateur Radio exams,
>and resulting licenses, are anything beyond that (only a few self-important
>hams have done so).

Yet in the past there have been repeated instances where qualifed
radio-electronics people were needed on short notice and they were recruited
from the ranks of amateur radio.

If what matters is the learning that happens *after* the license is in hand,
why all the fuss about written tests?

> "spark" transmitter),

The alternator was driving a spark gap, so it was a spark transmitter. Not only that, but there was a circuit known before that to keep a spark gap continuously energised without using an alternator, and that had actually been used by Duddell to transmit voice, although originally invented by someone else for arc lights (much the same thing as spark tansmitters in many ways, anyway!).

Fessenden's innovation was to run the alternator at 80 kHz, i.e. well above audio. Before that, only telegraphy transmitters could use alternators, which enabled you to run kilowatts instead of just a few watts, amplifiers having yet to be invented and detectors of the day being very 'deaf'.

Fessenden transmitted voice over one mile during December 1900, possibly
on the 12th, on Cobb Island, Maryland.

As is DeForrest's later voice coverage of the New York yacht race, using a
spark transmitter of the earlier type (no alternator) but using a
regenerative detector with a triode tube. I can't remember when that took
place, although it is in several books, but the triode (audion) patent
discloses the regenerative detector and was issued in 1907, so the yacht
race must have taken place around that period.

>
> IMO, the only way to counter them is to attempt a consensus of just how

>much "quality" and technical acumen is desired in a Ham.

But even that will not *prove* that the requirements for a license need to be such-and-so. For example, we can get a consensus that it's desirable for all hams to know Morse code, CPR, and the formula for inductance of a single-layer solenoid coil. Does that mean Morse code, CPR, and the formula for inductance of a single-layer solenoid coil *must* be test requirements? Of course not!

>It's what you
>and I are doing yapping about what Ham radio might become. It's what
>Hans is doing. I don't like everything he proposes, but I could live
>with it.

I like some of the things Hans proposes and dislike other things. The biggest problem I see in his proposals are the

> We have to bark about every attempt at reducing the knowledge or skills

>needed to become a Ham. We need to also guard against trying to set the
>bar too high - though I doubt that that will be much of a problem!

Some say that the bar is already too high. For example, Hans' proposal says that it's necessary and reasonable for all hams to have to pass the Extra written to stay on the air more than 10 years, but that it's *not* necessary or reasonable to require any code test at all.
>
> When a VEC group publishes what they want the ARS to become, and what
>they want is a drastic reduction in knowledge, at the same time granting
>priveliges for that reduction, we have to yell loud and strong.

I'd say we have to present strong, reasoned arguments.

> We have to realize that when we are told to shut up, it means that our
>arguments are good, and that "shut up" is the best argument the other
>side has to give.
>
Exactly. Which is perhaps the most important point of this whole exercise. Note how many times I've been told to shut up about this, called "poster boy for NTI" and other names, etc. Says a lot, doesn't it?

> We have to realize that while we may lose this fight no matter how hard

>we work at it, if we sit still and shut up, there is no doubt of the
>outcome. Entropy will take over.

Maybe it already has.
>

> We have to get those that believe that Morse code testing should go
>away to realize and admit that something must fill the vacuum created by
>its elimination.

How?

Many will say that no such vacuum is created, and there's nothing to replace. Others will say that the writtens are *harder* today than they were in the past. Etc.

>That something could be *nothing*, which results in a
>dramatic reduction in skill level.

I've been repeatedly told here that there should not be *any* skills tests for a ham license.

>They also need to realize that there
>are people out there who want even less in the way of admission
>requirements. "Nobody wants licenses just given away" or the like is a
>naive statement.

Sure. And there's also the concept of what constitutes a giveaway. Heck, the old 20 wpm/5 written test Extra has been passed by several children in their pre-teen years - how hard could it have been?

> Why? Because I could hand my wife the checkbook, turn her loose in AES
>or similar store, and after purchasing whatever the clerk reccomends,
>within a week or two she could be on the air.

Some would say "That's a good thing!"

>There really is no
>impediment too a person whose extent of rf knowledgfe is that you
>recieve by twisting the knob, and to transmit, you push the push to talk
>button. There is no technical requirement any more, at least to simply
>"get on the air". We have to generate our own requirements.

And how do you *prove* they are necessary, in a modern-day environment where even the self-proclaimed "professionals in radio" are using or will use manufactured rigs that are virtually foolproof?

The far left--the "fast" lane as it is called. Funny thing is, if you mention to people at the office or wherever, that it doesn't mean the "break the speed limit lane," you ought to hear the validations for people doing just that. The argument is along the lines that this is the lane where, if someone needs to pass, speeding is legal to get around them; or, this is the lane where if the majority of drivers wants to go a little faster than the flow of traffic, they do it there! There's more validations, but that's the gist of it...!!

Note that I let you know that I am already speeding, as it is. Up to about 15 MPH over the posted speed.

I hope I've got enough leverage between them and me. I prefer, and usually
can manage to, approx. 6 or more carlengths in front of me. More if I can
maintain it, but that's hard.

>

>

Know what happens here? If one is cautiously staying behind a fruitcake
driver, all the hurry-up-and-get-me-knowwhere nitiwits start passing like
they are the charging brigade--never taking just a moment to see what they
are pulling up on (a very dangerous situation with a driver ahead way too
close to the vehicle in front of them) or someone who's been doing a bit of
weaving; or whatever. So, depending upon the situation, letting this person
stay in front instead of taking the first opportunity to get around them,
can be more hazardous.

>

Hey, now. I like that one!! My darlin' would never do that, though. He's still in the phase that he puts up with this stuff and then crabs about it later--the phase I used to be in. BUT, it'd be neat to get in line with one of my girlfriends and start acting gay! If I get the courage to do that, and have one of my girlfriends who'll join in, I'll have to let you know how it turns out. I love that scene in "Ghost" with (was it?) Meg Ryan simulating an orgasm at the restaraunt table! I cracked up.

Yeah, I tried to take my parents out to a very nice dinner and there was one of these kids in the "booth" (yeah, I know...a booth at a nice restaraunt, go figure) next to us. Well, this kid was directly behind my parents.

After about the 3rd or 4th time the kid kept doing this, I became the obnoxious one. I kept saying, "SIR!" over and over again until the dad, who was trying his hardest to ignore me, looked at me and I said, "could you keep your kid reigned in? We are trying to have a family dinner ourselves over here." Well, these folks were so offended that they demonstratively got up, and abruptly left. As they were walking away I thanked them. I hope they talk about that for the next 20 years.

Yes. They are. And, while my behavior is not "forgiveable," I am no where as nasty as these folks are being.

Wow. Good point, Dwight. Maybe that idea of a term limitation license makes more sense than ever. I haven't been in favor of it...but maybe there's a part of it I haven't thought of, such as your comment above.

You cannot know that. One kind or encouraging word could have changed the
direction of someone's life and you would never know it. If even a single
person has been inspired by any word or act of mine, then I have indeed had
an impact on the world.

It just goes to show the exams for a driver's license are not tough enough.

The "going over the speed limit to complete passing" applies ONLY to TWO lane highways not multi-lane highways. Some states don't even allow that. In those states, if you can't safely pass and stay within the speed limit, you aren't supposed to pass at all.

According to state laws, the speed limit is the maximum that one is supposed to drive even in the "fast lane" with the exception of passing on a TWO lane highway in some states.

Glad you brought that up! Article 25, paragraph 6 refers to
administrators verifying operational and technical qualifications. It
refers to "guidance" that can be taken from Recommendation ITU-R-M.1544.
Ouch! "Guidance and "Reccomendations"? What have we here? That
administrations can bend the rules as they wish, with W1AW making
broadcasts, (which I support, BTW) third party operations between
schoolkids and the International space station, just to name a few. So
if they can bend rules, imagine their needed reaction to "guidelines".

I'm saying that the framework for NTI is in place, and no treaty changes
are needed. Maybe that deregulation argument I brough up the other day
isn't so far fetched after all.

> old 20 wpm/5 written test Extra has been passed by several children in their
> pre-teen years - how hard could it have been?

All I can say is that I studied over 6 months to get to 5 wpm. I have
been working now for the past 4 months to get my speed up. I've tried
several different methods, and am just now getting to the point where I
can pick out some of the words on the air. at least an hour a day, seven
days a week doing both computer and on the air, and I still suck. The
only thing that keeps me working at it is the personal challenge.

So while I am happy for those children that have learned 20 wpm Morse,
I have to say that it just ain't the same for everybody. If those rules
from long ago were still in effect, I'd probably have to have a
different hobby! My Novice ticket would run out, and that would be it.

We HAVE "absurdity", Lennie...

Just look up ANYTHING posted by "Lenover21", "Lenof21", "NoCWTest"
(the old one), "Avery Fineman", etc etc etc.

> DOS tip: The FCC determines what it requires in licensing of radio
> operators, NOT the "amateur community" or the "communities" of
> any other radio service that require radio operators.

The FCC determines what is required for licensing AFTER it asks
the public what it thinks. The FCC is not allowed, by law, to
arbitrarily make those determinations.

> You can always petiiton the FCC for a complete change in scope and
> description of U.S. amateur radio. I'd suggest you change the name to
> "Archaic Radiotelegraphy Service" for below-30-MHz. Make morse the
> prime definition of HF amateur radio.

Why?

You continue to make this assinine assertion, Your Scumbagginess,
howevr posts from even the most staunch of CW supportes indicates that
none of them are SOLELY CW operators. Even Larry Roll, who probably
IS the most staunch supporter, has discussed other digital mods at
length.

Your suggestion is therefore an antagonistic swipe at Amateur
Radio and yet another attempt to villify something you cannot or will
not understand.

Considering your alleged and proclaimed "professional" history in
"radio", this is illogical.

> Don't try to rationalize a weak argument of yours as "more noble, logical,
> in the best interests of the service," etc., etc. by feigning outrage at
> "improper acts of others."

Lennie, you should be the LAST person in this forum to insist
someone else "stop rationalizing" ANYthing...you ahve yet to make one
valid argument as to why Morse Code testing should be deleted other
than "no one else does it"...

> Don't worry, 981 commenters on RM-10811 (largest number of respondents
> of the 14 petitions) have been busy stating things in public.

And those 981 commenters have probably had more of an impact on
Amateur Radio than ALL of your ranting in here, Lennie.

> > We have to get those that believe that Morse code testing should go
> >away to realize and admit that something must fill the vacuum created by
> >its elimination.
>
> WHY?
>
> You are just about to fall over the edge of the "I had to do it so everyone
> else has to do it in the future" non-argument.

Again, YOU keep insisting on this "argument", Lennie, yet I've
not seen a single person utter that sentiment.

Why do YOU keep insisting on it when it's a non-argument?

> >That something could be *nothing*, which results in a
> >dramatic reduction in skill level.
>
> "Dramatic?!?!?" Only if you are a morseman is such a thing "dramatic."

The second-most used method of international communications IS
dramatic, Lennie. It is the only other real-time mode Amateurs can
use that allow persons of disimilar (sp?) languages to communicate,
even on a very basic level.

> :-)

Laugh at yourself, Lennie...We're certainly laughing at you.

> >They also need to realize that there
> >are people out there who want even less in the way of admission
> >requirements. "Nobody wants licenses just given away" or the like is a

Tsk, tsk, tsk. Circularity. USE of morse code is ALSO optional
yet the manual, "receive-by-ear" code test remains.

You are trying to have it both ways and knot yourself up...

>>Morse code should join those modes in that regard.
>
>We'll have to agree to disagree on that.

Amazing for you to admit that. :-)

Time today is NOT the "past" and the rest of the radio world has
advanced beyond hanging a carbon microphone in an antenna
lead and saying it is a "voice transmitter." :-)

>If what matters is the learning that happens *after* the license is in hand,
>why all the fuss about written tests?

Tsk, tsk, tsk...back to the circularity again (you are going around in
circles vainly trying to "prove you are right" and you aren't...).

The FCC determines what THEY need in ANY radio operator license or station license. The "amateur community" doesn't license anyone. U.S. radio amateurs are still free to make their desires known to the Commission...as are any U.S. citizens, licensed or not, in any civil radio service.

Amateur radio licensing is just a regulatory tool of the FCC. It isn't some kind of certificate of achievement like a degree, diploma, etc. Neither is it some "pass" into a New Lifestyle. It is nothing more than a permission to legally operate by certain allocated modes in certain allocated frequency bands. Your "lifestyle" commentary is just your own, not some divine dictate of morals or ethics in an avocation. If you want to live, breathe, give over your life to amateurism, that is your personal choice and yours alone. You have NO "right" to determine what others "should" enjoy or disagree...despite an insistence that you wish to dictate.

The FCC makes on-off keying CW mode OPTIONAL to U.S. radio amateurs. Yet the morse code test remains a NON-option for any amateur license class having below-30-MHz transmitting privileges. That is logically incompatible.

If the morse code test "must" stay, then the optionality of on-off keying morse code mode should be removed. If the option of using on-off keying remains, the morse code test should be removed.

To paraphrase Apollo 13 Flight Director Gene Kranz, "Option is not a failure."

The Thomas H. White "Early Radio History" pages on the Internet
give the details on Fessenden's audio experiments and includes
several photographs. [I've given the website address in here]

The carbon-arc lamp was not a Fessenden innovation nor is it related
to "radio." :-)

>Fessenden's innovation was to run the alternator at 80 kHz, i.e. well
>above audio. Before that, only telegraphy transmitters could use
>alternators, which enabled you to run kilowatts instead of just a few
>watts, amplifiers having yet to be invented and detectors of the day being
>very 'deaf'.

From what I can see in the history, Reginald Fessenden's only
"innovation" was to connect a specially-designed carbon
microphone in series with the LF transmitter's antenna lead and
then say it was a "voice and music transmitter." :-)

Let's just say that the great voice broadcast of 1906 was
PRIMITIVE insofar as technology was concerned. :-)

Even if the early radio receivers were also of low sensitivity, they
could receive AM. Most of the radio amateur's spark transmitters
of those pre-WW1 times used arc repetition rates of less than a
KiloHertz and were therefore distinguishable from atmospheric
noise...they were, essentially, AM detectors.

There isn't any recorded radio industry history of any rush to get
into radio broadcasting by the Fessenden "AM" of 1900 through
into the post-WW1 period, regardless of the high-tech of those
times. Broadcasting would have to wait for improvement of the
vacuum tube...and broadcasting was the driving industry of radio
development up to 1920 or so. Voice and music broadcasting,
not by morse code. :-) ...and not by having high-heat mikes
sitting in antenna leads series modulating the amplitude of the
transmitters... :-) :-) :-) :-)

The deliberate misdirection of a few regulars in here is to get well away from the subject of morse code and any test requirement. The nit-picking on the type/kind of Fessenden AM transmitter is one thing and those regulars distort recorded historical information on voice transmission. One even goes so far to introduce cellular telephones with the insistence that "turning on a cell phone handset automatically establishes contact with the nearest cell site" which it does NOT. Such is misdirection from the difference between the power-on control with the actual call/transmit control on the handset. Such things result in lots of "angry" words of denunciation occupying lots of time NOT about the code test.

The claim that proficiency in morse code results in "more ethical, more polite radio operators" is another one of the misdirections, along with all the other pre-WW2 mythos and fairystories about morse code pervading the psyches of devout morsemen. :-)

Happy holidays, Alun,

I think it was a hell of a good thing to do. It showed the ragheads he has
the gonads, and is willing to put it out in front.

It looked to me the troopers were quite impressed. Which is a good thing.
Moral is a very fragile thing, and when it starts to crumble...it all falls
apart.

But then that is what some people want in this country. Good to see the
comander in chief isn't one of them.

Try reading what I actually said a bit more carefully, Len. What I said was that a previous circuit was known that was borrowed from arc lamp technology, which enabled a spark to be continuous, in turn allowing 'phone to be transmitted by spark. This was done by Prof Duddell, FRS, and pre-dated Fessenden's 1900 experiment. I did not say that Fessenden used this system in this experiment, but it is known that he was familiar with it.

The cutting edge state of the art for telegraphy at the time was to excite a spark gap with an alternator, which allowed a large power output (kW) in those days before amplifiers. Spark phone was known, as per Duddell's system, but if you tried to use an alternator the problem was that the output frequency of any normal alternator was in the audible range, and constiuted a whine drowning out your voice, whereas in telegraphy it just gave each station's dits and dahs a distinctive tone.

Fessenden overcame this problem by having special high frequency alternators built to order by Poulsen, who was also considered to be a major figure in the early days of radio.

>>Fessenden's innovation was to run the alternator at 80 kHz, i.e. well

I'm afraid you are completely mistaken. This is a subject that I have researched quite a bit. There is a very old book by someone called Laughter that goes into a great deal of detail, and another informative work by Fleming, who just happens to also be the inventor of the vacuum tube. I have photocopied the relevant parts of both books. Neither are these my sole sources. Fessenden patented exactly this same system, and as I am a patent agent, it should not surprise you that I have read the patent. I have also read through the archives kept in the house where the experiments took place, and have discussed it all at length on the air with Bob Jeter, AG3B, a resident of the island. I do, in fact, live in the same county myself, so it is local history.

> lane highway in some states.

However, in most states, the laws also say slower traffic on multi-lane highways must move to the right lane to allow others to pass. There are usually no exceptions to those laws, such as not moving over for speeders. It is law enforcement's job to enforce the speed limits, not other drivers. Vehicles impeding other traffic, causing traffic jams and others to take risks to pass the slower vehicle, is a very common cause of accidents on multi-lane highways.

In Europe, it's routine to see maximum and minimum speed limits for each lane of a multi-lane highway. In some countries, you can often get a ticket faster for going too slow rather than too fast. They also have the requirement to move to the right to allow faster vehicles to pass. The general idea of all this is to prevent accidents by keeping traffic in each lane flowing smoothly, without excessive congestions (crowding) behind slower moving vehicles.

This is where some of the OF's say that all learning must occur prior
to the exam. Basically, nothing more can be learned after the Extra
exam. Except when they "earned" thir commercial licenses. Except
when Len brings up his commercial experience.

See what I mean?

I'm not buying it - never have.

But my entire message, including the argument in that sentence, was about the code test. However, within that context, it is indeed true that Morse code is not "necessary" for Amateur Radio today. The key word is "necessary," not enjoyable, not great recreation, not useful to make contacts with friends when conditions are bad, or whatever. Necessary. And, therefore, if Morse code is not uniquely necessary, it should join the other modes on the written tests without a unique testing requirement.

Considering the power levels, the number of frequencies and bands, the overall safety considerations, the desirability of proper operation when using the various operating modes, and the importance of the rules associated with all that, the necessity of the written exams is clearly obvious. Can you establish a similar necessity for the Morse code test?

> Prove the necessity for a written test beyond
> the most basic rules and regulations.

I've already explained the necessity of the written test in the previous message and in the paragraph above.

> Sure. The basics. So prove why the tests must
> go beyond those basics.

Since you keep asking this, do you have a point to make, Jim? This is a discussion about the code test. I have no desire to expand that into a discussion about the written exams, including a review of those exams. Further, I think the value of the written exams is bloody obvious to all. Therefore, there is nothing to prove.

> If what matters is the learning that happens

Learning is one aspect of the basis and purpose of the Amateur Radio Service, not the total sum. When discussing term limits on license class, all aspects of that should be considered. And, when it comes to those other aspects, there is no real benefit from term limits. Indeed, one could argue that it may actually harm those other things (reducing our overall numbers, for example).

Obviously, you didn't have the 'honor' of serving in Vietnam.

Bush took a calculated risk ... a big risk. I won't worry too much about his motives. It was nice that he actually visited the troops. I remember Bob Hope visiting Guam. He visited a lot of war zones in his career and he had no political agenda (and I am *not* detracting from President Bush - please don't read anything into my post)

Heheheeee ... Phil, I know you're an attourney and I suspect you have tried a couple of cases in your lifetime. Yep, there are two sides to every story.

I love the way the county in my area wants to dump on the city as they don't want to raise property taxes. I swear I'm going to ask them how come George M. C. Fisher (the former CEO of Kodak) bought property for 2.2 million and sold it for 2.24 million and the property is *still* accessed for 1.4 million. Yep, nothing like it. The big question is whether they will raise the property tax again or raise the sales tax to the highest in the state. It is simply amazing. Just follow the dollar$ and you will have your answer. Yes, the Repooblicans in Pittsford accessed George M. C. Fisher at 1.4 million when he bought the house at 2.2 million and sold it for 2.24 million. I doubt the other folks in Pittsford (where I lived as a kid) with homes worth perhaps 120,000 to 160,000 get such a break. My parents now live in Florida where the taxes aren't such a problem.

Lovely country, eh?

I'm listening t all the crappola on the news about this being an
election year stunt, wrecklessly endangering the Office of the
President, blah, blah, blah.

His daddy came to see us in Somalia, on Air Force One, after the
election that he lost. No election stunt. Nothing to be gained.
Just because he cared.

And I think Hans is barking up the wrong tree with his idea. I don't see any benefit whatsoever. It doesn't really serve a specific need within the Amateur Radio community. It doesn't serve the regulatory needs of the FCC. And it doesn't really serve the basis and purpose of the Amateur Radio Service.

Hans seems to be basing his idea on 97.1(c) and 97.1(d). The first talks about, "Encouragement and improvement of the amateur service through rules which provide for advancing skills in both communications and technical phases of the art." The second talks about, "Expansion of the existing reservoir within the amateur radio service of trained operators, technicians, and electronics experts." Neither of these even suggest the need for a requirement to advance in license class or get out. And neither suggests a need for a requirement to learn to a specific level or get out.

Hans also seems to be basing his idea on the faulty premise that one must advance in license class to learn, advance skills, or increase the reservoir of trained operators, technicians, and electronics experts. Of course, that premise is simply untrue. For example, one can learn about satellite communications, at least all that one can learn though Amateur Radio, with a Technician license (no license advancement required). The same with digital communications. The same with microwave communications. And the same with moonbounce, SSB, FM repeaters, and a long list of other skills, abilities, and radio arts.

Finally, I think Hans' idea would have a chilling effect on the Amateur Radio Service - assigning newcomers (once again) to an outside the mainstream, subordinate, sub-class with sharp limits on their participation. If I took my first look at Amateur radio, and saw that as my only option, I would probably not so politely say where you could stick it. The 'advance or get out' idea would make that almost a certainty (indeed, why even invest time, or in radio equipment, if there is even the slightest possibility of being forced out of something I know so little about at that particular moment - a potential newcomer).

Luckily, I think the FCC would have enough common sense to realize this idea is absurd. Sadly, it does seem to have it's supporters within the Amateur Radio community.

Hey Phil, you have self-admitted no experience whatsoever in military
science.

So your opinion of our Commander in Chief's trip to Iraq is of no
concern to you. None. Unless the double standard applies.

Just bill the Feds for your usual $400/hour advisory fees and call it
quits.

Merry Christmas to those who have never served and never risked a
damned thing but are full of opinions about what motivates fighting
men (and women) to get their business done, and what equipment they
might need.

That bothers me not at all. It's the Commission I need to persuade.

> Hans also seems to be basing his idea on the faulty premise that one must
> advance in license class to learn.....

I don't support that premise at all. Where did you read such off-target drivel? For more than 40 years I've been an outspoken critic of (dis)incentive licensing. My plan calls for a very simplified license structure of a broad-privileged learners permit to gain qualification, and a single license class after becoming qualified.

> Finally, I think Hans' idea would have a chilling effect on the Amateur
> Radio Service - assigning newcomers (once again) to an outside the
> mainstream......

On the contrary, my plan puts newcomers dead center in the mainstream of amateur radio, with all the same privileges of EVERY other licensee, just at a more modest power level of 50watts. No more limited-mode isolated and restricted ghettos like the former Novice class, and greatly expanded privileges beyond those enjoyed by todays entry-level Technicians.

It's clear to me that you haven't even taken the time to read the proposal I've made to the FCC. You can view a copy at my website http://www.home.earthlink.net/~k0hb .... click on the left hand column link to 'FCC Comments'. When you've taken the trouble to actually read what I've proposed, come back here with reasoned arguments against it. Until then you are not prepared and ill-qualified to comment.

Phil, after 8 years of dealing with a president who was willing
to commit our Armed Forces to battle without giving a drat about
"them", it's a breath of fresh air to have one who would do this.

The dollars and cents not withstanding, the military commanders
in the field will reap far greater results due to an increase in
morale than an extra box of bullets would have provided.

Noneed to. The FCC rules require it and I'm content with that.
If you (Jim N2EY) feel otherwise, then petition the FCC for the
change. Unless you or someone else does othat, this is just academic

futility. The code TEST however, has already been acknowledged by
the FCC as not being needed anymore...so the burden of proof to retain
a code test falls on those that wish to keep 5 wpm.

<SNIP of additional comparisons of license requirements vs
license privileges>

I have also noted that perhaps it is time for some "revamping"
of licensing such that the privileges bear some relationship
to the level of license granted. It will, if that path is
taken, be a protracted process (IMHO).

As anyone who understands formal logic knows, reductio ad absurdum is
a valid
way of evaluating the validity of an assertion.

It works like this: An assertion is analyzed by logical methods, and
if the
result is an absurdity, the original statement must be false.
>
> So far the only people I see "making fun" of Jim Miccolis are

Yup. And the way it's being done is a little step at a time - just like other
requirements were eliminated. Like nonrenewable entry level licenses, tests
conducted by the FCC from a nonpublished test pool, experience requirements,
etc.

END OF QUOTE...

I was reading my December 2003 "CQ" magazine and found an item penned by Jim Wiley KL7CC, Scott Neustadter W4WW, and the snake oil salesman of Amateur Radio...Fred Maia W5YI.

The whole jist of the article is aimed at creating yet another Amateur Radio license, and the article suggests numerous "snips" of other requirements from the regulatory, theory, practice and safety regulations in order to "make" a slimmed-down beginners' license.

See if you can remember where their following suggestion was once an actual practice of the Federal Communications Commission, and how well it worked in practice:

(From page 36, December 2003 "CQ") QUOTE "Remove some of the math from the license exams. Remove some or even most of the "radio law" type questions. Instead require the applicants to sign a statement that they have read the Part 97 rulebook, and that they ahve a copy (available for free via web download). Yes, some of the applicants will "skate" and not read it when they signed that they did. But most will, and even among those who dont, eventually, probablysooner rather than later, they will get around to it. Some never will. That's human nature. We're not looking for saints, just people who can become producetive hams". UNQUOTE

My first question for these brain surgeons is HOW IN THE BLUE BLAZES CAN SOMEONE BE "PRODUCTIVE" IF THEY DON"T KNOW THE RULES...?!?!

These people are in a position of responsibility for mentoring the next generation of Amateurs..?!?!

We'd be better off letting Michael Jackson be their sand lot supervisor! ! !

While I am a big proponent of CLOSING the question pools and thereby requiring potential licensees to actually LEARN something, including regulations, even our present system of open pools and rote memorization will ingrain SOME understanding of the most of the basic rules of the service!

Of course I can't help but believe this is another W5YI initiative to help perpetuate his "publishing" business, especially

since it will soon lose part of it's subject matter (code tapes).

One more new license would be yet another "text" he could get around to selling.

Read the whole article. It's a really poorly thought out concept and one that's been beaten over and over again.

None of the other modes requires any skill at all beyond connecting the pieces per the diagrams and typing on the keyboard or pushing a mike button. Although typing is a skill, it is not radio specific and the hunt & peck typist gets by. Virtually anyone can put set up & run in an afternoon once they have acquired the equipment. The skill requirement to operate other modes is insignificant. I've operated both RTTY and packet and other digital modes and found them totally boring but I have had experience with them and there simply is no specific skill required.

> did you read such off-target drivel? (snip)

Well, lets see where I could have gotten that from. First, you propose a non-renewable license with a specific time limit to upgrade to a higher license class. That certainly fits what I said. Second, you justify the entire proposal by claiming the current tests are "not adequate to insure a high level of expertise in new applicants." This introduces the idea of raising the level of learning. And, finally, you set the license test all must take to upgrade at "a difficulty level similar to the current Extra class test." Those three together only suggest one thing - you don't think the lower class operators today re knowledgeable enough, you feel all should be forced to improve on that, and you offer the most difficult license test available today as the sole means to accomplish it. Perhaps you can explain where I'm wrong in that.

> (snip) My plan calls for a very simplified
> license structure of a broad-privileged
> learners permit (snip)

The test proposal for new applicants makes the least sense of all. You introduced the proposal by claiming the current tests "are not adequate to insure a high level of expertise in new applicants." But you later propose a greatly simplified test for those new applicants (much more basic than today's Technician test). How can you "insure a high level of expertise in new applicants" by offering a even more simplified test?

> On the contrary, my plan puts newcomers
> dead center in the mainstream of amateur
> radio, with all the same privileges of EVERY
> other licensee, just at a more modest power
> level of 50watts. (snip)

More modest power levels? That 50 watts you propose is 1,450 watts less than what Technicians can use today. That's a pretty significant hit, not a modest one. As for privileges, once the code test is gone, Technicians can gain considerable HF privileges by taking the General written. Your proposal would intentionally take that away by setting the bar to upgrade even higher (the Extra class test). And, if newcomers fail to reach that higher bar, out

they go - their non-renewable license is gone.

And if this isn't all about assigning newcomers to a subordinate class, why don't you change the names of those new licenses you propose - Class A for the entry license class and Class B for the other license class? As it is, it's clear only someone who has taken an Extra class-like test can be a "Class A" Amateur Radio Operator.

> It's clear to me that you haven't even taken
> the time to read the proposal I've made to
> the FCC. (snip)

I've read the proposal and what you've said about the proposal in this newsgroup. I stand by what I've said here and in the previous message.

Saying so doesn't make it true, Dee. Within the goals and purposes of the Amateur Radio Service, and to justify a unique testing requirement, how is Morse code uniquely necessary today? Do remember recreational use is not sufficient enough to justify a unique testing requirement (recreational use is equally applicable to all modes and they don't have a unique testing requirement).

Really? You mean all those things I did to get a properly operating station (putting coax and connectors together, waterproofing, antenna tuning, SWR tests, ground radials, masts, guy wires, wiring a microphone, equipment grounding, lightning protection, RF exposure level estimates, and so on) wasn't really needed and didn't really require any skills to do properly? Well, I guess I'll just forget about all that stuff in the future.

> (snip) Virtually anyone can put set up & run in

In an afternoon? You mean I wasted all those days it took to get everything in my station working just right, not counting all the time I've spent fiddling around to get even better performance since then. Well, you're obviously a much more gifted operator than I am.

And I'd say Phil's views hasn't been that far out of the mainstream on each. A lot of people don't like Microsoft. Wal-Mart just got caught in a rather unethical business activity. A lot of people also think Dr. Laura is a fruitcake. And, while I like and have openly supported Bush, his trip (sneaking into Iraq to pose for cameras) was an expensive, even childish, stunt (something I would not have expected from him, or any other president).

What's unique is that most people old enough to pass the amateur radio license exams do not already have Morse skills, and will have to learn Morse skills in order to use the mode. But the vast majority of those same people already posess the skills to use other modes.

So what it comes down to is that a little serious skill-learning is required to use Morse on the air, except for a very few people who have learned Morse elsewhere. I think that plain, simple fact bothers some of the most vociferous and abusive anti-code-test folks.

Not at all. Just that all those things (except RF exposure estimate) were optional and your choice, determined by the technologies you decided to use.

And most of them were not on your license tests. You figured out how to do them as a matter of practical necessity, not to pass a test.

The idea isn't that they'll have a high level of expertise right off, but that they'll reach that level through the 'incentive' of having to either upgrade or leave the air.

Sure. But at the same time, they will have all frequencies and all modes. That's a pretty significant increase.

>As for privileges, once the code test is gone, Technicians can
>gain considerable HF privileges by taking the General written.

Right now, Technicians can gain almost all priviliges by passing the General written (only 35 questions) and the 5 wpm code receiving test. Been that way for almost three years.

>Your proposal
>would intentionally take that away by setting the bar to upgrade even higher
>(the Extra class test). And, if newcomers fail to reach that higher bar, out
>they go - their non-renewable license is gone.

Exactly.

But they would have 10 years to do it.

In the bad old days, a new ham had to pass the old General written (which was split into the Tech and General writtens in 1987) to get a permanent/renewable license of any class. The old Novice was meant as a learning tool, not a permanent license.

> And if this isn't all about assigning newcomers to a subordinate class,

I think you missed the major contradiction/paradox of Hans' proposal, Dwight.

He proposes a simplified test for the LP license, yet all LPs would be allowed all frequencies and modes.

So the simplified test has to be adequate for the LPs to use all freqs and modes - just not full power.

How can a simplifed test do that?

And if the simplified test *is* adequate, why should the higher-class test require more than the additional stuff needed to run high power?

One can also use morse code with a "decoding" sheet to send and
recieve at very slow speeds,

> The skill requirement to operate other
> modes is insignificant.

The same can be said for morse...unless you want to operate at
other than a basic level. For some reason, this discussion always
seems to presume one must be code literate at speeds well above
even 5 wpm for code to be useful to anyone. If one can "hunt & peck"
via a keyboard, the same can be done for morse using a "cheat sheet"
to send and receive morse at slow speeds.

> I've operated both RTTY and packet and other
> digital modes and found them totally boring but I have had experience with
> them and there simply is no specific skill required.

Even "hunt & peck" requires an ability to use the keyboard
at a very minimal level. You may not think that it is any
skill level at all, but it is.

Cheers,
Bill K2UNK

It really isn't too bad a plan, although there are a few weaknesses that are a bit bothersome.

That 50 watt limit for the class B license is simply unenforcable, save some sort of training wheel governor device that they would have to put on their transmitters.

If you want to put a time limit on upgrading, it really should be a lot shorter, like 3 years. Ten years is simply way too long. The prospective class A Ham almost certainly will upgrade in a year or two.

But I still don't like the idea of a forced retirement. It brings up an absurdity like a person that operates exclusivly QRP having to upgrade so that he/she is now allowed to use 1.5 kW. That's all they get. So they are forced to upgrade and spend money for something that means nothing to them - save keeping their license.

I really do like the idea of "time in grade". It is one of the best ideas ever abandoned by the FCC.

A lifetime grant license? Well, I'm not too sure. I guess it is a pretty good thing. If you don't have to renew it, there aren't processing costs.

I personally don't have the desire to "take advantage of" CW. I haven't
been interested in CW since I was first introduced to it and found it
nothing more than a necessary evil--a means to an end--to licensing in
amateur radio. I also found it uniquely lacking in any pertinent
application to the process of amateur radio, overall.

CW is a wonderful skill to have if one enjoys communicating with it. It is
also an art and a traditional part of the ARS that I would like to see stick
around. I believe there are enough interested individuals to keep it that
way--and I used to see new folks all the time who were interested in it.
Can't speak for lately because I've really been out of the ARS scene for

quite some time now. But, it'd be my guess that there are still people excited by CW and who will learn it, use it, and enjoy it.

I don't believe any of the above is enough merit to have it as part of the licensing requirement, though...

Well, what I would support would be something like a pretty simple test--I mean darned simple--with a minimal operating privilege built in with it. At the end of something like a year or 2 years, then one would either have to upgrade with a more technical and knowledge-based test and a higher, permanent license class. I still would leave CW out of the mix, too...

However, I don't think there's going to be any major changes to the licensing or testing structure for another couple of years. Jim, I think it was, had a thread going with the predictions of when CW would be taken out and I think I had a couple of years while others were guessing pretty quick. I think CW testing is here to stay for a while.

Just because an idea was old, doesn't mean it wasn't bad! 8^) I would
have to suspect that the old Novice non-renewable was probably to allow
the prospective "permanent" ham to hone his or her Morse CW skills
rather than learn the writtens of the time. So the big question is what
is going to be different about this new class gap that ten years is an
appropriate time lag.

For a hobby, ten years is just too long a time. If there are going to be
limits, they should be reasonable ones.

And how are we going to take care of the "shack on a belt" crowd. A
awful lot of hams are quite happy with their Technician licenses. A
forced upgrade with absolutely no advantage for a person that only does
public events, and uses the local repeater once in a while is not going
to be very popular with them. And "they" are a pretty large percentage.
Yes of course that is among people already licensed, but my point is
that this proposal is very HF-centric.

> And if the simplified test *is* adequate, why should the higher-class test
> require more than the additional stuff needed to run high power?

And of course, how ya gonna enforce that 50 watt limit? Enacting
unenforceable laws is a great way to breed disrespect for laws.

>the speed limit lane," you ought to hear the validations for people doing
>just that.

But you're already speeding, Kim. And not by an amount that can be
explained by the usual inaccuraccies and imperfections of speedometers.

Yet your getting ticked off because someone wants to go even faster.

>The argument is along the lines that this is the lane where, if
>someone needs to pass, speeding is legal to get around them;

Ah - but why does someone *need* to pass?

As Dee points out, on a two-lane, two direction road, it may be necessary to
go fast to get out of a tough passing situation. But on a multilane divided
highway where traffic is already zooming at the speed limit or above, why does
anyone not in a life-and-death emergency situation *need* to pass?

>or, this is the
>lane where if the majority of drivers wants to go a little faster than the
>flow of traffic, they do it there! There's more validations, but that's the
>gist of it...!!

And they take the risk of being fined, or worse.
>
>Note that I let you know that I am already speeding, as it is. Up to about
>15 MPH over the posted speed.

Right.

So you have justified such speeding to yourself, even though it violates the
law. The person behind you who wants to go 20-25 MPH over the limit has
almost certainly justified their behavior to him/herself, even though it also
violates the law.

>> >Or, they'll do the

>> it was *your* fault!
>
>I hope I've got enough leverage between them and me.

I hope so too, but if they don't, you might be in a bad spot. Particularly if
someone dies or is seriously injured. Try arguing your high beams at a
graveside....

>I prefer, and usually
>can manage to, approx. 6 or more carlengths in front of me. More if I can

>stay in front instead of taking the first opportunity to get around them,
>can be more hazardous.

I disagree. I simply pull over and let the whacko get farther ahead. Miles, if necessary. At 60 MPH, one minute of delay buys me a mile of space. I can spare that minute.

>
>> >Then, there's the folks in the store. You'll know who I'm talking about

>
>Wow. Really?

Honest. Stores here mostly have express lanes (10 items or less) - some have two or even three levels of express (8 items or less, 15 items or less, etc.). And they enforce the item count.

>Maybe I just need to move. This is so commonplace down here,
>you're considered the idiot if you don't let these folks get ahead.

I've never encountered that sort of behavior. Line discipline/courtesy around here is really very good, even around the holidays. Maybe it *is* a regional thing.

>> >Used to do that, too. No more. It's my turn dammit and they can wait.

bwaahaahaa

>I love that scene in "Ghost" with (was it?) Meg Ryan
>simulating an orgasm at the restaraunt table! I cracked up.

That was Meg Ryan and Billy Crystal in "When Harry Met Sally". He had said she
couldn't convincingly fake it.

The topper to her performance was the little old lady (played by the director's
real-life mom) who said "I'll have what she's having"...

There was also a Seinfeld about faking....
>
>> >

Well Dwight saying it isn't doesn't make that true either Dwight. I speak from personal experience. How much HF experience have you had? How much weak signal VHF experience have you had? Again keep in mind that I have said Morse is necessary. While I happen to believe that testing should be maintained that is NOT the point I am debating at this time and you keep trying to drag it back to testing. I am stating that Morse code itself is necessary.

Doesn't require a gift merely knowing what to do and when to do it. Most
people don't try to set up the station and all the options at once. They
generally work at it in stages gaining experience as the go.

You will find that most experienced hams could set up a complete station,
including antennas, digital modes etc within a matter of hours. Many do so
for single station operation in Field Day.

No 5wpm is useful just a tedious for the listener. Learning it to a
higher speed simply makes it easier to communicate and increases the
probability that the person will not forget his/her code over time.

However, using a "cheat sheet" won't even let you go 5wpm as it takes too
long to look up the letters.

In today's world, most people have to learn that skill at a minimmal anyway
whether or not they wish to be radio Amateurs so do not include that as
something unique to Amateur Radio.

Mike, You and I know it can't be enforced without invasion of privacy. You have to go on the operator's property and make local field strength measurements. Just reading the signal strength from another station won't do it as we've all experienced working a QRP station when propagation was good and receiving them at 10 over S9.

I believe you have previously stated that once you tried HF, you did not care for it and have since stayed primarily with VHF FM. There's nothing wrong with that. However, those who work a lot of HF are really shortchanging themselves if they are unable to use CW.

Well, I'm a foreigner in your country, but you can't deny that the economy boomed under Clinton and is now on it's knees.

I'm not fond of the present government, but mainly for other reasons. Civil liberties and John Ashcroft, mostly.

All in all, I can't really think of anything GW Bush has done domestically that is anything to shout about. Tax cuts for the rich. Deficit spending. I'm really trying to think of anything good (honestly), but nothing comes to mind.

As for the war, why open that can of worms? Yes, Saddam is/was a very bad guy. Do I beleive the reasons given for going to war? No. And yes, Blair went along with it, but I don't like him a lot either.

... but then I'm an anti-code test liberal, so what did you expect?

However, I actually do think it was a nice gesture for Dubbya to go to Baghdad for Thanksgiving.

I'm sure this post will draw the usual 'love it or leave it' garbage from at least someone, but never mind. I can take it.

Yep. You can even listen to re-creations of what it may have sounded like
on-line. I posted the urls here some time back.

By 1903, he had reached 50 miles.

Of course in a way *almost all* spark transmitters use alternators, because
except for simple spark coils, they *all* use AC generated by alternators...

Fessenden's innovation was to use AC above the voice frequency range.

Brilliant guy. Over 500 patents, in a variety of fields.

Practical regenerative detection is generally credited to Armstrong in 1915.
However, DeForest's use of voice communication at such an early date is another
historic fact.

Seems to me that Fessenden's transatlantic 2 way radiotelephone operation is
the most significant of these early developments. Less than 5 years after
Marconi claimed one-time one-way reception of a single coded letter, Fessenden
had practical, repeatable, two-way voice transatlantic radio communications
over a longer path, using much less power.

Amateur radio itself isn't even necessary. I've been a ham for 23 years,
nearly 24, and I've never used CW. So it's 'necessary' for me to use CW?
Right.

What is annoying is that a skill test is foisted on those who don't have
the desire to use the skill. Learning the theory of modes you don't want
to use is not too onerous, but having to pass a typing test to use phone
would be just as annoying and stupid as having to pass a code test to use
phone, for example. Besides, having to know about other modes is
reasonable, but actually learning to use them is another matter. Also, if
I hear CW on my frequency I may be able to read it with some difficulty,

but if I hear RTTY or PSK31 there is no chance.

I don't know about Dwight, but I use HF a lot, and I have done weak signal
work on VHF in the past. For the former I have never found CW to be
necessary, as it has never been necessary that I make any particular QSO.
As for the latter, I have never even heard any CW above 30 MHz, except
repeater IDs! This includes VHF contests. You may be using it, but I guess
I can't hear your sigs.

I work a lot of HF, relatively speaking, and I have considered wiring up a key from time to time, but decided against it. Shortchanging myself? I don't think so. I'm happy to stay on phone. Now, I have met people who don't like phone, and I'm fine with that. It just so happens that I don't like CW, in the sense of I have no desire to use it. That should be OK too, but for some reason it bothers you. Why?

>using the various operating modes, and the importance of the rules
>associated with all that, the necessity of the written exams is clearly
>obvious.

No, it isn't.

You're avoiding my question, Dwight.

Why must hams be forced to learn about *any* modes and technologies whose use is strictly optional? Indeed, someone who cannot speak and is totally deaf cannot use voice modes - yet the written exams are full of questions on AM, SSB, FM, etc. Why are such tests *necessary*?

Why is *any* written test beyond the basics of rules, regulations and safety *necessary*?

Or consider this:

Techs are permitted to use all authorized (amateur) modes and frequencies above 30 MHz - at full authorized power. This authorization is based on the successful passing of a single 35 question written test. FCC says so - in fact, almost four years ago they drastically reduced the written testing needed to get a Tech license.

Yet to have full privileges, a ham must pass additional written tests. Sure, the addtional tests include rules and regs a Tech doesn't need to know, as well as some things like HF/MF propagation. Buty those tests go far beyond the additional regs and propagation. Why is that sort of thing *necessary*, since a Tech has already shown that he/she is qualified on all authorized modes at full authorized power?

>Can you establish a similar necessity for the Morse code test?

Sure. Here goes:

Considering the many advantages of Morse code, the number of frequencies and bands on which it is used, the number of amateurs who

use it on the air and their exemplary conformance to the rules, regulations and operating procedures of the ARS, the necessity of the Morse code exam is clearly obvious.

There you go.

>> Prove the necessity for a written test beyond
>> the most basic rules and regulations.
>
> I've already explained the necessity of the written test in the previous
>message and in the paragraph above.

No, you haven't. You've explained why *a* written test on the most basic rules and regulations is desirable, and maybe even necessary, not why we must have the written tests we have today..
>
>> Sure. The basics. So prove why the tests must
>> go beyond those basics.
>
>
> Since you keep asking this, do you have a point to make, Jim?

Yes.

The point is that some folks apply a double standard when deciding which tests to keep and which to get rid of.

>This is a
>discussion about the code test.

Sure. And I've shown that if the same criteria you are using to justify dumping the code test can also be used to justify dumping almost all of the content of the written tests.

And so far I haven't seen anything to disprove my argument. Just "it's obvious".

>I have no desire to expand that into a
>discussion about the written exams, including a review of those exams.

I can understand why.

>Further, I think the value of the written exams is bloody obvious to all.

So you really don't have a counter argument when someone doesn't find it obvious.

>Therefore, there is nothing to prove.

Just the opposite.

>> If what matters is the learning that happens
>> *after* the license is in hand, why all the fuss
>> about written tests?
>

> Read my first paragraph above.
>
I have. Doesn't answer my question.

I don't want the written tests to go away or be watered down further. But I cannot come
up with solid counterarguments *rpoving* that all of their content is necessary. And I
suspect that others can't, either - or they would present those arguments.

'Empire of the Air' (both the TV show and the book) claimed that Armstrong came up with regeneration in 1911. De Forrest's patent pre-dated that by another four years, and he won the court case. How could it ever have been in doubt, when Armstrong's 'eureka' moment was four years after DeForrest had the patent in his hand?

Armstrong seemed to rely on the argument that DeForrest didn't understand what he had done, which is a lame argument to say the least. Maybe he didn't understand what he had done, but he still did it first.

The "Clinton boom" was a result of the building economy from the previous
administrations. The fall in the economy is a result of various economic
issues that developed in the latter part of the Clinton administration and
only began to be felt after he left office. I'm not blaming anyone mind you
but the economy started tanking right after the change in administration
BEFORE the whammy from 9/11 and the current administration hadn't yet
changed anything. The economy as a whole takes time to react. You have to
examine the several preceding years to find the causes not the current year.

For anyone individual and their operating style it may not be necessary.
However that decision needs to be based on knowledge and experience not "I
don't want to learn" arguments.

Which is why in an emergency situation, if voice is unusable, I would pick CW rather than RTTY, PSK31, etc. There are more ops out there listening and although some are rusty on their code since they don't use it much they could still help even if the code had to be sent really slowly.

No it does not bother me that someone who has learned it chooses not to use
it. They have made that decision from a position of knowledge and
experience. This is radically different from a person judging it and saying
they will never use it when they do not have that knowledge and experience
to draw on.

Getting caught..?!?! perhaps not.

The "Commander-in-Chief" material comes from the strength of
character it took to not fold to interrogator's deamnds, to have not
lost faith with his comrades, and that he came home alive despite the
ordeal.

Yes...John McCain is an American Hero. Several times over...

And MY respect for the current Commander-in-Chief comes from the
fact that, wether you agree with him or not, when he's in the news,
it's about the business of the nation...Not who he's "doing" on the
sly or what nefarious deals his spouse is engaged in.

Had Billary stood up to the first accusations against him
(protesting the Viet Nam war while in England) and said, "Yes, I
protested the war. It was my right to do so as a citizen", even the
most right-wing Hawks would have had to give him credit as being
truthful. He didn't...he tried to lie his way out of it and was
proven to be a liar. Every SUBSEQUENT accusation that erupted also
had the opportunity for him to "stand up" and be counted, but he tried
to lie his way out of those, too.

Our present Commander-in-Chief may not be the smoothest orator or
do everything "right", but I have far greater respect for a man who
can try, fail, and admit to it than one who tries to lie his way out
of his actions.

Watta concept!

>I would
>have to suspect that the old Novice non-renewable was probably to allow
>the prospective "permanent" ham to hone his or her Morse CW skills
>rather than learn the writtens of the time.

You suspect wrong!

The old Novice was meant as a learner's permit for both the code and written -
in fact, more for the written than the code. A Novice could upgrade to Tech
with no more written skills (both licenses always required just 5 wpm code).
But upgrading to *any* permanent/renewable license required the
General/Tech/Conditional written test, which was much more involved than the
old Novice written.

The old Novice privileges included 2 meters (145-147 MHz) code and AM voice (until 1967). The idea was that some Novices would go on to General and others to Tech, depending on whether they were primarily interested in HF or VHF.

>So the big question is what
>is going to be different about this new class gap that ten years is an
>appropriate time lag.

The idea is that the jump will be all the way to Extra-level written testing. The ten-year term is meant to be a generous allotment of time, plus the current license term is ten years.
>
>For a hobby, ten years is just too long a time. If there are going to be
>limits, they should be reasonable ones.

Why is 10 years unreasonable? I recall Hans saying that if someone can't or won't reach the level required for a full-privs license in 10 years, they probably aren't that interested. (Correct me if I'm mistaken on that, Hans).

>awful lot of hams are quite happy with their Technician licenses.

Hans' proposal would not affect any existing hams' privileges. Those with existing licenses other than Extra could keep them, renew them and modify them as long as they retain interest. Existing Techs could stay Tech forever - no problem.

>A
>forced upgrade with absolutely no advantage for a person that only does

>Yes of course that is among people already licensed, but my point is
>that this proposal is very HF-centric.

They wouldn't have to change anything.

But it only applies to existing hams. Newbies might get ticked off that the same options weren't open to them.

What stops me from running 5 kW? or more than the allowed power on 30 meters or the Novice bands?

More so as the bands deteriorate due to the approaching minimum. As conditions become worse, those who have waited for the MOrse code to go away will (especially if my 4 year prediction pans out) get on the air, and wonder just what the heck the big deal is about the ARS. Just one of the reasons I've been flogging myself to learn Morse with some proficiency.

In article <bptj04$1st6i0$9@ID-189073.news.uni-berlin.de>, "Ryan, KC8PMX" <REMOVETHISkc8pmx@diamondcs.net> writes:

>But in regards to the math..... compare a 10,000 dollar mortgage versus the >10,000 car loan with applicable rates.

That's the point explained below. In some cases, it may make more financial sense to pay cash for the car and have a bigger mortgage.

>Nowhere did I say that one should
>use refinancing money to pay off other debts.

Sure - but it's often a better deal to do just that.

>The other debts themselves to
>be paid off quicker if at a higher interest rate is what I said, even if I >didn't make that painfully clear.

The point I'm making is that you have to actually do the numbers to get the clear picture.

In fact it often makes a lot of sense to consolidate high interest indebtedness into a mortgage (first or second). Here's an example:

Suppose someone has gotten themselves into the following situation:

Mortgage: 6.5%, $100,000 unpaid principal, 25 years left on a 30 year loan. Monthly P&I payment: $675.21

Credit cards: 15%, $25,000 total. 4 year payoff requires monthly payment of $658.35

Car loan: 7%, $10,000 unpaid principal, 4 year payoff requires monthly payment of $239.46

(note - the above is not an exaggeration - some people are in worse holes than this!)

Left alone, the person will have to pay $1573.02 per month for the next four years to pay off the car and credit cards, then they'll be on the hook for $675.21 per month for the following 21 years to pay off the house. Total payments of $245657.88 over the next quarter century, with $75,504.96 due in the next 48 months.

Calculation of deductible vs. nondeductible interest is left as an exercise for the reader.

Now suppose the person can get a 15 year refi at 5%. And suppose they refi the whole mess, paying off the high interest nonmortgage loans immediately. Total

mortgage of $135,000. Monthly payment of $1067.57 for the next 15 years. Total payments of $192,162.60 over the next 15 years.

That means an immeidate reduction in monthly payments of over $500, total payout reduced by over $53,000 and total ownership of the house 10 years earlier.

Again, calculation of deductible vs. nondeductible interest is left as an exercise for the reader.

Now some folks might say that it's not a good idea to fold short-term items like cars and credit cards into longterm stuff like mortgages. OK, fine - then watch this:

Suppose we get a new 25 year mortgage of $100,000 at 5.5%. Monthly payment is $567.79 That saves over $100 per month right off.

And suppose we also get a 15 year mortgage/consolidation loan for $35,000 at 5.5%. Monthly payment $285.98. But we pay off this loan at the rate of $813.98 per month - which will result in it being paid off in four years.

Under this plan, total monthly payment is $1381.77 - a monthly saving of almost $200 per month and a long-term monthly saving of over $100 per month. And *all* of the interest is tax deductible.

Of course the *best* deal is not to get into such a hole in the first place. And the people who do dig themselves such holes will often have a hard time being financially disciplined enough to pay off their loans ahead of time rather than spending the difference.

And people say math is boring....

>some sort of training wheel governor device that they would have to put
>on their transmitters.

Why would it be any more complex than what we have now?

And in the old days, there was no big deal about enforcing Novices' use of no
more than 75 watts input and crystal control.
>
> If you want to put a time limit on upgrading, it really should be a lot

>shorter, like 3 years. Ten years is simply way too long. The prospective
> class A Ham almost certainly will upgrade in a year or two.

Maybe not! Look how many Tech Pluses are still on the books today, even though
for the past 42 months they've been able to upgrade with just a single written
- or in many cases, no test at all. And the number of Tech Pluses has also been
dropping by renewals as Techs.....
>
> But I still don't like the idea of a forced retirement. It brings up an

>absurdity like a person that operates exclusivly QRP having to upgrade
>so that he/she is now allowed to use 1.5 kW. That's all they get. So
>they are forced to upgrade and spend money for something that means
>nothing to them - save keeping their license.

The same was true in the old days if a ham simply wanted to operate in the
Novice bands with xtal control and 75 watts...

When incentive licensing was reinstituted in 1968, a lot of hams had to upgrade
just to do what they'd been doing for years.

> I really do like the idea of "time in grade". It is one of the best
>ideas ever abandoned by the FCC.

Me too, but it's an uphill climb to get it back.
>
> A lifetime grant license? Well, I'm not too sure. I guess it is a
>pretty good thing. If you don't have to renew it, there aren't
>processing costs.

The big problem is that the license won't expire even if its holder does. The database will contain more and more entries of long-dead or lost-interest hams.

Perhaps that's part of Hans' plan - the number of hams with that class of license will grow and grow and grow...

FCC will cancel a license if proper paperwork is done. Usually this takes the form of a family member sending in a death certificate so that the SK's call can be reassigned to a friend, club or relative.

Given the 10 year license term and such things as online renewal, I don't see renewal costs as a big line item in the FCC budget.

Stop picking on the King odf Pop, it's not fair:

http://www.geocities.com/tom5515/frame.htm

Actually, it's kinfd of outrageous, wasn't Hugh Hefner a target of
Nixon's Justice Department in the 1970's --i think this is equally
political.

If he is such an 'idiot' and McCain is so smart...then how come the 'idiot'
is the President?

Oh, I know. The Republicans stole the election, right?

Lets not even go down that street again.

Well I don't trust a man that can't figure out what party he is in.

McCain is a Republican in name only.

I disagree with that comment Brian. He didn't fail. The government failed him by forcing the pilots to fly the pocket. No deviation. No way to not get hit. It was stupid. All McCain did was follow orders.

Nope it is not laughable. There are many necessary things in life that people do not do. They choose for reasons of their own to omit them. Annual physicals are a "necessary" item for people of middle age and older but I know quite a few people who do not get them. Keeping one's weight under control is "necessary" but there's a lot of us carrying more weight than we should.

Exactly....if that Klintoon Klown would have showed a bit of back bone, and slapped the crap out of Hillary he would have earned my respect.

I remember how he treated the military....and how the vets turned their backs on him at Arlington. Etc. Etc.

Now we have a man in charge. Not perfect, but a man none the less.

Sorry Phil. Unadultrated bullshit. "Your War" was also "My War". Don't
try to BS me.

That war was a discrace and the way the people of this country acted was a worse discrace.

Then a draft dodging jerk is elected and people 'still' support him. You ought to be ashamed Phil.

I guess 'your war' and 'my war' were a bit different.

The economy was taking a downturn BEFORE Clinton got out of office. The economic policy of the Clinton presidency was what ??? Right, there was none. He was riding on the coat tails of Reagan/Bush one.

Has everyone forgotten about 9/11? We are at war. Or has that little detail been forgotten also?

It was not our choice to have some ragheads plow three jets into buildings, and one into the ground and kill nearly 3000 innocents. Some of which were MUSLIM.

But it is our choice how to respond. If you think Sadam didn't have anything to do with it. Let me sell you a bridge in NYC.

I imagine you're being a bit glib about that. If a ham is running way too much power at the KW end of the scale, there will be possibilities of TVI or RFI. There will be a local discernable problem with other hams too.

But the difference between 50 and 100 watts? Not all that much that is detectable. For this plan to work, (work means compliance) the equipment manufacturers will have to throttle their transcievers to 50 watts.

Does being employed by DoD for almost 10 years at duty stations
which were prime targets for a Soviet ICBM first- or second-strikes
during the '50s and '60s count for anything?

It's not my fault that I was rejected when I was drafted - yes,
drafted. After that I was a civilian employee for SAC at SAC Hq
and several AF bases, all prime targets.

My butt was on the line, my friend. Every day when the nation was
'sposed to be "at peace".

>So your opinion of our Commander in Chief's trip to Iraq is of no
>concern to you. None. Unless the double standard applies.

It is of major concern to me. Even though I wasn't wearing a blue
suit the POTUS was -my- CiC as well, and even to this day I pay
taxes which fund such things.

>Just bill the Feds for your usual $400/hour advisory fees and call it quits.

In your dreams. My "fees" were more like $1.50/hour when I started
with DoD and $4/hour when I left the military end of Federal
business in 1964. Even up to this day I was never a "consultant" or
"advisor" to the Feds. I was one of the working troops.

>Merry Christmas to those who have never served and never risked a
>damned thing but are full of opinions about what motivates fighting
>men (and women) to get their business done, and what equipment they

I'm not in that category. I strongly believe that the Habibi need
the charra kicked out of them for a lot of reasons, including the
expulsion of a branch of my family from what is now Iraq in the 13th
Century (no, I don't want the family villa back but it was tempting).

I don't want this to turn into another Vietnam, either.

Another bozo.

What gets me about that maneuver is that when he flew from Tex-as to Andrews to pick up the standby plane using the cover excuse that the plane was going back there for maintenance, SOP is to fly the replacement to where the one going in for maintenance is BEFORE the move is made. Any plane-watcher hobbyist could have picked up on that. Ditto for the facilities of White House Communications Agency (a branch of the military).

And what about the two AF fighters which always accompany the plane when POTUS is aboard? Another dead giveaway.

Good trick....

(good story on selective assessment clipped)

>Lovely country, eh?

Of course the other side of the coin is where the voters get fed up
with paying for what they expect the state and local governments to
give them and enact a cap on property tax increases which also
includes a provision that when a property changes hands out of the
immediate family it is assessed at the sale price. California calls
this Proposition 13 and Oregon calls it Measure 5. We got whacked
when my family bought a house in California before the provision
went in but after the cut-off date when the assessments were
"referenced back". For 10 years we lived in a house that was
identical in size, age, and condition to the house next door, and we
paid twice as much taxes as they did.

Lovely country. eh ? You're so right.

Perhaps I am looking at it from a different view, because of my
difficulties with Morse, but from what I've seen, the new tests aren't
that hard - and well, what I've been able to glean is that the old tests
were'nt that har either. So I may be a prejudiced observer. But how many
people needed all that time to prepare for the writtens? And wasn't the
General 12 wpm?

It is most *certainly* a problem with new hams who have the same goals
as those who are happy being technicians now.

So we get rid of Morse code because of the poor souls who are kept out
of it because it is there, and then we force them to upgrade because of
why? We kick them out because of why?

And there it is. WHY?

If a ham is perfectly capable of operating on HF at 10 years licensing,
whay is he/she not qualified at 10 years and one day?

WHY? It's arbitrary, and unfair. and in the end, a touch absurd.

>>A
>>forced upgrade with absolutely no advantage for a person that only does

Uh-huh! The old Techs get to keep their licenses forever, (do they have
to reregister after ten years, or are they techs forever with no renewal
if they want to be) but the new class B's are this long-term one-shot deal.

Go ahead and fire up that 5kW station! I bet you can be found fairly
quickly.

But seriously, the really big difference is that for you to run 5 kW,
you have to do something above and beyond the ordinary, like put
together or purchase an amplifier, tuner, and the like.

Class B person simply has to turn that little RF power knob up past 50
watts. Perhaps the manufacturers will be forced to limit the output
power to 50 watts?

I think the old days were a bit different than today.

I don't think that people drove thier cars 30-35 miles per hour over
the speed limit as a routine thing. We just opend a new double laned
road in the area. Has a 40 mph speed limit. The first day, there were
something like ten people pulled over for going 75 mph and up on it. The
local bypass is 55. I am regularly passed by cars going 100 mph. At
least twice every trip. I'm going 70 and I'm a target. Going the speed
limit is tantamount to suicide.

My point is that if the radio can do 100 watts, that's where they are
going to put it. And that being the case, forgo the useless regulation.

I don't propose to force them to upgrade. Technicians are perfectly free to renew their current license.

> And of course, how ya gonna enforce that 50 watt limit? Enacting
> unenforceable laws is a great way to breed disrespect for laws.

There are currently many examples of limited power in the rules. How do we enforce the current 50W limit which exists for EVERYONE on some HF frequencies? How do we enforce the current 200W limit in the Novice sub-bands? How did we enforce the old 75W limit for Novices? How did we enforce the old 50W limits on 160 meters? How do we enforce the current 200W limit on 30 meters? How do we enforce the 50W PEP limit on 219-220MHz? How do we enforce the current Novice 5W limit on 23 cm? How do we enforce the current 25W limit for Novices on 1.25 cm? As a matter of fact, how do we enforce the current 1.5KW limit? Are you suggesting that FCC discard all these limits because they breed disrespect? What a 'novel' idea!!!! (I quit using the word 'stupid'.)

> be forced to improve on that

Nope, not at all. Under my proposal you'd be free to keep renewing
your Technician (what a misnomer!) license until you assume room
temperature.

> The test proposal for new applicants makes the least sense of all.

> More modest power levels? That 50 watts you propose is 1,450 watts less
> than what Technicians can use today. That's a pretty significant hit, not a
> modest one.

Technicians could continue to renew their current license until they
assume room temperature.

> As for privileges, once the code test is gone, Technicians can
> gain considerable HF privileges by taking the General written.

My proposal would allow them a transition period to do just that.
Then they could continue to renew their no-code General test until
they assumed room temperature.

Amateur Radio Newsline™ Report 1372 – November 28, 2003

Amateur Radio Newsline report number 1372 with a release date of Friday, November 28, 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. Australia plans a celebration to welcome no-code, a New Zealand ham plans an Amateur Radio replacement for a frequency standard station and the U-S-A is on the verge of banning unsolicited junk e-mail. Find out the details on Amateur Radio Newsline report number 1372 coming your way right now.

(Billboard Cart Here)

**

RESTRUCTURING: WELCOMING NO CODE “DOWN-UNDER”

Last week Australia’s decided to abolish code exams on the 1st of January. Now its planning a world-wide on-the-air celebration as 2003 gives way to 2004 and Morse testing disappears. Jim Linton, VK3PC, has the story and an invitation for you to take part:

--

On New Year's Day 2004 Australian radio amateurs will gain access to the High Frequency bands using licenses that don't require the passing of Morse code telegraphy tests. The Wireless Institute of Australia invites the world's amateur radio fraternity to join an on-air celebration of this special occasion.

To celebrate the event, there will be a "WIA Welcome to HF QSO Party" beginning at 0001 Australian Eastern Daylight Time and conclude at 2400 UTC on New Year's Day - a total of 35 hours. The VK radio amateurs appearing on HF bands for the first time can be identified by three-letter VK callsign suffixes that begin with the letters H, T, U, X, Y and Z.

WIA amateur stations will be on air to join the HF QSO Party, and these have two-letter callsign suffixes "WI" or three letter suffixes starting with "WI." Listen for the call "CQ WIA Welcome to HF QSO Party".

For the Amateur Radio Newsline, I’m Jim Linton VK3PC.

--

Many in Amateur Radio have been campaigning for years to have code tests removed as a license requirement to operate on amateur bands below 30 MHz. For Australia this will happen on the 1st of January, 2004 with this very special on-the-air celebration.

(DO NOT READ. Find out more by e-mailing hfqsoparty@wiavic.org.au (Q-News))

**

INTERNATIONAL - NEW ZEALAND: A PROPOSAL TO REPLACE VNG

Still down-under, word that well known "Digital Modes" Amateur, Murray Greenman, ZL1BPU, has proposed that New Zealand and Australian hams put together a network of simple and inexpensive transmitters. This, to provide a high accuracy Standard Frequency Service to replace the VNG standards station that has now gone QRT. Amateur Radio Newslines Jim Meachen ZL2BHF is in Auckland with the details:

--

Amateurs in the South Pacific have for many years relied on VNG transmissions as a prime source of accurate frequency reference. With the closure of VNG in December 2002, the sole remaining precision signal source in our area is WWVH, in Hawaii. Unfortunately the WWVH signal quality in the South Pacific is generally too poor for reliable use, either to zero beat a simple calibrator, or using more sophisticated computer based techniques.

ZL1BPU says that a series of tests over the last two years has shown that simple low power carrier transmissions on the 80m band would fulfill most of the requirements of a Standard Frequency Service:

--

Greenman: “Using simple HF transmitters that I've designed, we have confirmed that low power transmissions are very useful, for both calibration and propagation study, up to at least 3000 km range.

Anyone can monitor these signals, using a stable receiver and freely available software to look for small frequency shifts that accompany each propagation path. Classic effects such as multiple paths with different refractive indices for different signal polarization’s are easily observable.

Doppler shift is particularly marked around sunrise and sunset. Observing these signals gives a better understanding of propagation, which is the key to accurate on-air frequency measurement.”

--

The Service now operates on a test basis with transmissions from a high precision local reference on an exact kHz point 80m frequency using a carrier power of 1-5W. The Transmissions are identified in Morse every 30 minutes. Operation is from a different geographical location each weekend. Transmission times are announced and coordinated beforehand by e-mail.

Reporting from Auckland New Zealand I'm Jim Meachen ZL2BHF for Newsline

--

ZL1BPU adds that these are privately owned, operated and attended test transmissions, not beacons. Establishing a Standard Frequency Service formally, perhaps under the auspices of the NZART, might be considered in the

future. (NZART News)

COMMUNICATIONS LAW: HOUSE PASSES ANTI-SPAM LAW

Here in the U-S-A, Congress has moved closer to passing the first-ever federal protections against unwanted commercial e-mails. This, with the House passing a bill on Saturday, November 22nd that would impose new limits on sending direct advertising offers -- commonly called spam mail.

Approved on a 392 to 5 vote, the measure would prohibit senders of unsolicited commercial e-mail from disguising their identity by using a false return address or misleading subject line. It would also prohibit bulk mailers from harvesting addresses off websites and require such e-mails to include a mechanism so recipients can indicate they do not want future mass mailings. Penalties for failure to comply could be up to five years in prison in some circumstances.

The House bill largely mirrors ant-Spam legislation the Senate approved last month. Supporters hope that slight differences between the two measures can be resolved before Congress adjourns for the year. The Bush administration says that it supports the anti-spam efforts. (Published news reports)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Montgomery Amateur Radio Club repeater serving Rockville Maryland.

(5 sec pause here)

**

RADIO LAW: THE FCC ON PRIVACY OF INFORMATION

The FCC has put in place a temporary policy that will keep the public from knowing who is facing enforcement action by that agency. Amateur Radio Newsline’s Bruce Tennant, K6PZW, picks up the story:

--

Don’t look for names and call signs of alleged regulatory violators to be released by the FCC anymore. At least not for a while. This is because the agency has revised the format in which it's supplying the media and the public with information regarding alleged regulatory scofflaws, including those in the Amateur Radio service.

The revised temporary policy is based on privacy concerns within the FCC. Until further notice, the agency says that it will only provide the location where a violator lives along with a very brief synopsis of the action taken.

Following a policy review now taking place the FCC says it will announce a new privacy policy for all future information releases.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, reporting.

--

No timetable has been announced for the privacy policy review to be completed. (FCC)

**

ENFORCEMENT: NO MORE ADS AND WE RENEW YOUR LICENSE

And without mentioning any name or callsign, the FCC has acted in a pending non-certified radio equipment marketing case. This, as a Tomah, Wisconsin, licensee is informed that renewal of his Technician license would be granted on the condition that he permanently remove from the World-Wide-Web certain information.

The FCC says what it wants removed includes any advertisements for, or references to, the sale of transmitting equipment that operates, or is intended to operate, on frequencies in the Citizens Band service. Also references to gear for any other radio service requiring the use of certified transmitting equipment but which has not been certificated by the regulatory agency.

If he says O-K, he gets his ticket renewed. If he refuses to comply, the FCC says that his renewal will be designated for hearing before Administrative Law judge. (FCC)

**

ENFORCEMENT: PA REPEATER PROBLEM

The FCC has also warned a Lewistown, Pennsylvania, Extra class licensee that he must heed the request by a repeater owner to stay off that system and that technical problems with his own repeater must be corrected immediately.

And in an Order issued by Philadelphia FCC office that licensee was told that his repeater could not operate under automatic control until further notice. He was also requested to provide operational information about the repeater, including names and addresses of control operators. (FCC)

**

ENFORCEMENT: TOWER VANDAL FACES 27 MONTHS IN PRISON

And you can just about write the words "the end" to the case of a Washington man accused of tampering with more than 20 high voltage power towers in four western states that we have been reporting on. 62-year-old Michael Poulin has admitted the charges and has entered a plea bargain agreement with federal prosecutors. As a result, he will serve no more than 27 months in prison. He also faces a possible fine of $500,000. Without the plea agreement he could have been sentenced to jail for up to 10 years. (CGC)

**

RADIO LAW FOLLOW-UP: THE NEVADA HIGHWAY PATROL VS THE FCC

Some enforcement news of a different kind by way of the Reno Gazzette Journal and the C-G-C Communicator. Both bring word that the Nevada Highway Patrol has turned over a 255 page investigative report and 2,500 pages of supporting documentation to that states Attorney General's office. The Attorney General will now consider the possibility of criminal charges will be determined in connection with the police agency’s use of a radio system on frequencies for which it holds no licenses.

As previously reported, the highway patrol launched the investigation earlier this year when it was discovered that it didn’t have the proper licenses to operate the $14 million communications system built for it in 2000. The FCC has threatened to fine Nevada and block the states future license requests if the Nevada Highway Patrol does not quickly abandon use of the unauthorized frequencies. (CGC)

**

WITH THE ARRL: 2004 ELECTION RESULTS

The ARRL has announced that Frank Fallon, N2FF, retained his seat as Director of the League's Hudson Division. This, by defeating Vice Director Steve Mendelsohn, W2ML, by a vote of 1933 to 1470.

Ballots were counted November 21 at ARRL Headquarters. The Hudson Division's was the sole contested seat in the current director-vice director election cycle.

Incumbents running in the Central, New England, Northwestern and Roanoke Divisions ran unopposed and were declared elected. Joyce Birmingham, KA2ANF, was the lone candidate for the vice director's seat that W2ML vacated to run for the division's top spot and was also declared as elected.

And don’t look for as many League elections to take place in the future as in years past. These candidates were elected to serve three-year terms of office that begin at noon on January 1, 2004. The change from two year to three year terms was instituted by the ARRL Board a few years ago. (ARRL)

**

REQUIRED READING: SURGE PROTECTION - SEPARATING MYTH FROM FACT

If you think that $2.98 bargain basement power strip will protect your ham gear from power line spikes, you could be in for a rude and very expensive awakening. This is the gist of a feature article in the December issue of Popular Communications Magazine titled Surge Protection: Separating Myth From Fact.

The author is Popcom Editor Harold Ort, N2RLL. In it, Ort takes you on a mind boggling journey into the world of powerline surge protectors. He tells you why power surges take place and what really works to protect your station -- and -- what does not.

The article is must reading for any ham that operates his station from mains power. You can find Popular Communications on many newsstands worldwide or subscribe over the web at www dot popular dash communications dot com. (ARNewsline(tm))

**

INDUSTRY NEWS: ROHN ANNOUNCES ASSET PURCHASE AGREEMENT

Amateur Radio and telecommunications industry tower manufacturer ROHN Industries has announced that it's entered into an asset purchase agreement. This with SPX Corporation which is described as a global, multi-industry company.

According to the ARRL Letter, ROHN filed for Chapter 11 debtor-in-possession relief in the US Bankruptcy Court for the Southern District of Indiana on September 16. The deal, if approved by the court would include ROHN subsidiaries that are party to the bankruptcy proceeding. (WA6KLA, ARRL)

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

**

WITH ARNEWSLINE: YOUR INPUT NEEDED

Amateur Radio Newsline will be holding its annual Board of Directors meeting in early December and those in charge want to find out what you would like from us in 2004 and beyond. If you have any ideas on how to improve the newscast, the Young Ham of the Year Award, funding, or any aspect of our operation, we welcome your thoughts. E-mail is best. You reach us at newsline@arnewsline.org. (ARNewsline(tm))

**

HAM HELP: DX SOUND BITE NEEDED

Did you have a tape recorder running the weekend of the CQ World Wide SSB contest? If you did then Glen Lowery, K2FF needs to hear what you have.

The reason? Well, it seems that Daryl Goldman, KD5CQT, and Randy Becnel, W5UE , spent a week in Suriname in October. Goldman operated as PZ5CQ while Becnel was on as PZ5UE. The duo also activated PZ5A in the contest.

Anyhow, when the team got back home they realized that they had recorded everyone on tape except PZ5UE. And now there is a presentation planned for early December and audio of Becnel in QSO is needed to complete the show.

If you happened to be listening in and have the one missing station recorded, please contact Glen Lowery by e-mail to k2ff@aol.ccm Everyone involved will be very appreciative if one of you can help out.

More is on the web at www.mdxa.org/pz_2003.html (OPDX)

**

EMERGING TECHNOLOGY: CELL PHONES WILL POSSESS LOCATION-BASED BEHAVIOR

According to a report on the National Institute of Standards and Technology website, your cell phone may one day be able to adjust its behavior or call handling based upon where it determines you are located. Such phones could, for example, advise you of the closest bank, dial the nearest emergency specialist or automatically forward your calls while you're in a conference room. The N-I-S-T website carries many other interesting stories too. Its updated regularly and is in cyberspace at www.nist.gov (CGC)

**

HAM RADIO IN SPACE: ARISS GEAR PASSES PREFLIGHT TEST

Some exciting news on new ham radio hardware slated to be carried to the International Space Station. We have more in this report:

--

ARISS International Chairman Frank Bauer, KA3HDO, reports that he and other members of the USA team just returned from Russia where we they were supporting a series of meetings and tests at the Energia facility.

According to Bauer, the primary reason for the US team visit was to complete the testing of the Phase 1 Ericsson 2 meter and 70 cm radios, along with the Phase 2 Kenwood D 700 radio system using a set of flight identical ARISS antenna systems.

The tests were performed in the KIS facility at Energia that houses all their flight equipment. Inside the KIS is a flight equivalent Service Module. The good news is that the group not only successfully completed the end-to-end testing of the Kenwood and Ericsson radio systems but the SSTV system as well.

The successful completion of these end-to-end tests was a requirement by the Russian team. This, to clear these radio systems for use in the on-orbit Service Module.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP.

--

By the way, the International Space Station celebrated its fifth anniversary in Earth orbit on November 20th. (ARISS)

**

ON THE AIR: NEW SPANISH LANGUAGE IRLP REFLECTOR

A Spanish language reflector has come to the Internet Repeater Linking Project. This, with word that Reflector 9201 is in full operation and all users with Spanish skills are invited to join in the fun.

Jay Santiago, KP4EOP, is the operator of node 7040. He and the Chicago based Asociacion Iberoamericana de Radio Aficionados are the people behind the project. They say that 9201 is not closed to non-Spanish speakers. Rather it is a place in ham radio cyberspace where the Spanish language will be primary.

Up until now, IRLP- has been dominated English and French speaking nodes and reflectors. This left a large portion of the worlds Spanish only speakers out of communications over the very popular repeater linking system -- a problem that’s now been corrected thanks to the Asociacion Iberoamericana de Radio Aficionados. (K9DC)

**

PROPAGATION TECHNOLOGY: NEW SOLAR FLARE THEORY

The recent series of solar storms to hit Earth may be caused by the sun's iron-rich interior. So says one solar researcher who theorizes that the sun's core is made of iron rather than hydrogen.

Dr. Oliver Manuel is a professor of nuclear chemistry. He believes that iron, not hydrogen, is the sun's most abundant element. And, in a paper accepted for publication in the Journal of Fusion Energy, Manuel asserts that the standard solar model which assumes that the sun's core is made of hydrogen has led to misunderstandings of how such solar flares occur.

As ever ham knows, these flares can play havoc with high frequency communications while turning some VHF frequencies into world-wide D-X bands. (ANS and Space Daily)

**

DX

And speaking about DX, word that OK1TN will operate portable KP2 from St. Thomas in the Virgin Islands through the 13th of December. If you make contact, QSL as directed on the air.

Also, K3JT is active as 5X1X from Uganda for the five or six weeks. Sorry. No other information on this operation is available at this time.

Lastly, the Council of Europe Radio Amateur Club, has launched a competition open to all radio amateurs. This, to commemorate the 18th anniversary of its establishment in June 1986. The challenge involves sending a list of all contacts made with their club station TP2CE using its various special prefixes before the end of June 2004. Complete rules can be found on the Internet at ewwa.free.fr

(This weeks DX news provided by OPDX, GB2RS and Modern DX’er)

**

THAT FINAL ITEM: T-HUNT TIME AGAIN

And finally this week, whether you're young or old, you could become a champion at hidden transmitter hunting. It's time to start training now, as you'll hear in this report from Amateur Radio Newsline's Joe Moell K-Zero-Oh-V

--
USA's best on-foot hidden transmitter hunters will be heading west next summer. The fourth annual USA ARDF Championships will begin June 16 near Santa Barbara, California. Get ready for practice sessions followed by separate days of intense competition on the two meter and 80 meter bands. Medals will be awarded in nine age and gender categories, following the rules of the International Amateur Radio Union.

The competitive courses are open to anyone of any age, experienced or not. Here's your chance to learn from experts like Jay Thompson W6JAY, Newsline's Young ham of the year. He was a medal winner at this year's Championships in Ohio.

These USA Championships will take place just in time for final selection of Team USA members who will travel to the Czech Republic for the ARDF World Championships in September.

Event sponsor for 2004 is the Santa Barbara Amateur Radio club. General Chair is Marvin Johnston KE6HTS, a member of USA's first team to the World Championships back in 1998 and winner of medals at the last two USA Championships.

The official Web site of the 2004 Championships is now being prepared, announcing the location of event headquarters, rules and technical details. Meanwhile, you can find out all about championship direction finding, and how your can have events in your home town, at the "Homing In" Web site, www.homingin.com

You'll learn the rules for this fast-growing sport, meet some of the current champions, get equipment suggestions and find out how to get on an e-mail list for the latest radio-orienteering news. That's homingin, one word, homingin.com

From southern California, where we have regular on-foot foxhunts and everyone is invited, this is Joe Moell K-Zero-Oscar-Victor for Amateur Radio Newsline.

--

Again, for more information take your web browser to www.homingin.com (K0OV, ARNewsline(tm))

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). No! In fact, this is the definition of a
"Rear Echelon Commando" But of course to you this was
probably front line combat duty. Feel free to apply for your
"Cold War" combat certificate though.

> It's not my fault that I was rejected when I was drafted - yes,

> 'sposed to be "at peace".

We are sure you engaged the "enemy" in many many
fire fights, while trying to be first to the time clock at the end
of your eight hour "combat" tour of duty!

> It is of major concern to me. Even though I wasn't wearing a blue
> suit the POTUS was -my- CiC as well, and even to this day I pay

Oh my, another concerned citizen who pays taxes.
Get In Line!

> Remove head from rectum and have a happy whatever you celebrate.

This was a typical remark we would hear from Rear Echelon
Commandos is Saigon, attempting to justify their "importance,"
while sitting at the bar in their pressed uniforms, shiny boots,
and chest full of ribbons.

No, you just don't like the answer given. If anything, I'm ignoring a fanciful, long-winded, exchange that cannot add anything of real substance to the discussion about Morse code testing (see below).

> > Since you keep asking this, do you
> > have a point to make, Jim?
>
> Yes.
>
> The point is that some folks apply a double
> standard when deciding which tests to keep
> and which to get rid of.

The only double standard that exists is not having the same testing for all operating modes. Unless there is a justification to do otherwise, either have skill testing for all modes or no skill testing for any mode. There is no longer any justification today for a unique test solely for Morse code. That opinion is consistent with recent FCC published statements. As such, the unique Morse code test should be eliminated.

Not willing to accept that, you ignore the obvious double standard and instead try conjure up an imaginary double standard relating to the written tests. No such double standard exists. Those written tests, and their contents, serve a valid purpose today. None here, including you, have said otherwise. The same cannot be said about the Morse code test.

With all that in mind, I have no desire to engage in a fanciful discussion about the contents of the written tests, especially when that discussion cannot possibly lead to a valid point - no conflict or double standard exists concerning the written tests. As such, I've ignored the rest of your message and have instead addressed the specific point you've acknowledged trying to make.

The 13th century??? You're as nuts as they are.

> I don't want this to turn into another Vietnam, either.

We'd need a hell of a climate change for that to happen.

In ever conflict that we engage in, we need to see it through to the bitter end.

Do you really believe that Clinton had anything to do with the
economy?

I think if Clinton had come in to office with the economy waning and a
terrorist attack around the corner he would have performed extremely
poorly.

Not quite. It was the best kept "secret" of that election. I just
read where the GDP has increased at a "blistering 8.1%" last quarter.
Last time I heard that kind of talk we had Alan Greenspan putting the
brakes on the economy.

I disagree that a national guardsman speaking at his local church
about how he doesn't want to go to Iraq is a good thing for America.

There's no cheat sheet for learning Morse code. If and when someone decideds to do it, they must rise up off their kiester and "learn" it. Herein lies the burr in the saddle.

No matter how much more difficult the writtens become, as long as the Q&A pool are published, passing a written element will continue to require no more than a study guide and a highlighter...and perhaps a day or two of "study." Notice I didn't say "learn" the material in order to pass.

This is why some folks consider it a filter. It's been said it filters out lids, CBers, etc...but in reality, it only filters out those who are not motivated enough to make the effort in the first place.

Decode Morse code with a decoding chart at very slode speeds? Possible...not realistic, but possible.

Alan, I'm gonna let you in on a secret...although I know that you're already aware of it. Preparing for and passing the 5-wpm Elemnt 1 test does NOT leave one ready to use the skill OTA. It only gives one a taste so that one may make an educated choice as to whether or not they wish to persue CW any further.

The majority of newbies I've worked sent at approx. 8 to 10-wpm. (That's right, just below the plateau.) We seem to gravitate to one another. Ok, the Novice/Tech"+" sub-bands help bring us together. My point is that those who actually get OTA are putting in more effort than needed just to pass Element 1. Those who pass Element 1 and wish to go no further with CW have made a truly educated dicision because they now have a little "practical" experience with the mode under their belt on which to base their decision...and are not just simply talking from their @$$!

> Learning the theory of modes you don't want
> to use is not too onerous, but having to pass a typing test to use phone
> would be just as annoying and stupid as having to pass a code test to use
> phone, for example. Besides, having to know about other modes is

As I mentioned in another post, the mode is really not the issue...the having to really learn it is. Do away with the published Q&A pools and watch the whining escalate.

> Also, if
> I hear CW on my frequency I may be able to read it with some difficulty,

> I am stating that Morse code itself is necessary.

We wouldn't be having this discussion if it were not for the code testing debate, Dee. That is why this mode is being discussed as opposed to some other mode or discussions about the weather. I've acknowledged that Morse code is enjoyable, entertaining, useful, and perhaps even necessary for you to make some of the contacts you want to make. But we're not just talking about you or the contacts you want to make. Your communications are recreational or avocational in nature, not a necessity. And, as long as your communications are not necessary, your use of Morse code in those communications is not necessary.

This brings us back to the code testing debate. If Morse code is not necessary to meet the goals and purposes of the Amateur Radio Service today, Morse code testing should be eliminated. The _use_ of Morse code not an issue here. You will still be able to use that mode when you find it necessary to make the contacts you want. Others will still be able to learn code if they want. But the test itself, as a license requirement, should end.

Right on the money, Dee. Larry pointed this out earlier, but not as
eloquently as you.

3541. Response to "21st Century" Part Three (Communicator License)

Newsgroup: rec.radio.amateur.policy
Date: 2003-11-30 13:28:22 UTC
From: n2ey@aol.com
Message-ID: <20031130082822.15462.00004618@mb-m06.aol.com>
Source record: 83117

This is a response to the paper "Amateur Radio in the 21st Century", prepared by Jim Wiley, KL7CC, with assistance from other members of NCVEC working on changes to the US Amateur rules. This response is intended to evaluate and constructively comment on the merits of the various ideas and changes presented in the paper, regardless of their source.

For purposes of clarity and brevity, the introductions and executive summaries are not reproduced here.

"Part One" dealt with the code test. "Part Two" and "Part Three" deal with the proposed "Communicator" license.

Since the style of the paper is conversational, I inserted my comments into the original paper in the same style, so that the paper reads like a conversation between KL7CC and myself. My comments are preceded with "N2EY". The main text of the original paper is preceded by "KL7CC".

Here is my response to "Amateur Radio In the 21st Century"

Part Three

KL7CC: How about those who feel insulted that these new hams are gaining "free" access to bands that "they had to work hard for". Excuse me? Do we recognize that times have changed and move on, or not?

N2EY: Excuse me? What exactly does "that times have changed and move on" mean in this context? Are you saying that those who disagree with you should simply shut up?

KL7CC: Following that argument to it's logical end, isn't it reasonable to say that if the newcomers have to learn the old stuff before they can have a license, then the existing licensees should have to give back their tickets until they could show they had mastered all the newer techniques too? Wouldn't that be fair? I'm sure it seems reasonable to a newcomer. Sauce for the goose, and all that, right?

N2EY: Wrong. Licenses are granted for a specific term. They are renewed based on the licensee having a clean record. It is part of the "conditions of grant" that licensees will stay current with changes in rules and regulations as they apply to their license.

KL7CC: A timetable:

As we all know, several petitions requesting that the FCC remove Morse code testing have been filed. Depending on how soon a NPRM is issued, assuming it is at all, then we have to wait while they slog their way through the rule making process. One of the things that will happen is that comments, both pro and con, will begin to accumulate. After a several weeks or at most a few months,

and assuming the majority of comments are in favor of eliminating the code as a licensing requirement, then we plan to file for a waiver asking for an immediate end to code testing. Obviously, this can only be done if there are enough favorable comments on file for the FCC to justify granting such a waiver. The actual change in the FCC rules will still be in progress, but if we can show that there is enough interest, and that such a waiver will be beneficial to Amateur Radio as a whole, then there is a good chance it would be granted.

N2EY: It is also possible that FCC will go through the entire NPRM process before dropping Element 1.

KL7CC: Very soon (a few days at most) after the Morse requirement disappears, assuming it does, then we plan to file for the creation of the "Communicator" license, as detailed elsewhere in this discussion. We will follow the same procedure as before, filing a petition for a NPRM, and starting the clock on that issue. Assuming the comments on that issue are also favorable, after a reasonable time has elapsed, we will file a petition to upgrade Techs to General, and Advanced to Extra, as explained earlier.

We will probably not be able to accelerate the creation of the "Communicator" license, since it would involve a complete restructure of the present system, but in case that option should become available, we would likewise pursue that end.

Next, once the "Communicator" proposal started to look like it would become reality, we would file another petition asking that the Novice HF assignments be re-allocated, also as per the previous discussion. We would further ask that the re-allocation take place at the same time as the implementation date of the new license, so that those who passed their tests would have a place to operate.

N2EY: Why all the steps and delays? Look how long the last restructuring took! And there are still petitions on the table for refarming the Novice bands.

If the Communicator is a good idea, then it should be openly discussed and developed in the entire amateur community now, and a comprehensive proposal put together so that everything is handled in one NPRM cycle.

KL7CC: In all cases, because this is a multiple step process, useful information will be gained as each part moves forward. This is actually a benefit, because we may very well find that some of the present ideas need revision before being submitted.

All this will take some time, perhaps spanning several years. Mixed in with these proposals, but not part of them, will be the issue of how to best implement other changes to the amateur regulations that came out of WRC-2003, such as the 40 meter readjustment. These issues have their own timetable, of course, but those issues and the topics discussed in the possible petitions mentioned here do interact to varying degrees.

In other words, nothing is going to happen next week, and everyone will have ample time to offer his or her own suggestions as to how to proceed. There

will be no "rush to judgment". All the present actions have done, or can do, is to get something out there for consideration. There is absolutely no guarantee that the FCC, or the ham community at large, will accept these proposals.

N2EY: The thing to do is develop them out in the open, with input from all interested parties. Otherwise, you are cutting yourself off from the community whose support you need to make the proposal work.

KL7CC: You have heard a lot about what we are planning. Now, how about some of the things we are not addressing at this time:

We are not addressing the issue of reallocation of bands or sub-bands, either by mode or license class, with the sole exception of using the former Novice CW sub-bands on 80, 40, 15 and 10 meters to create working space for new Communicator licensees. By the way, don't forget that this adjustment will create more phone space for General, Advanced, and Extra operators at the same time. And, in the case of 40 meters, when the WRC-2003 re-allocation adds another 100 KHz the band in regions 1 and 3 (that is to say, adding 7100-7200 to the present 7000-7100 world wide Amateur allocation), there will be a 100 KHz phone band overlap all ready to go!

N2EY: Communicators need more than those 4 bands on HF.

KL7CC: We are not suggesting that the CW sub-bands, or the exclusive CW bands for Extra licensees, be eliminated or otherwise adjusted. Again, with the exception of Novice CW, we are not proposing any change whatsoever to the present band plans or allocations.

N2EY: There are NO exclusive CW subbands in amateur HF or MF. All are shared with data modes.

With all due respect, if someone doesn't know that simple fact, or cannot bother to write "CW/data subbands", that person really shouldn't be proposing policy changes. Just my opinion.

Using terms like "CW bands" and "exclusive CW subbands" has caused some hams to believe that other modes are not allowed there.

KL7CC: We are not addressing the issue of the relative split between General, Advanced, and Extra allocations at HF.

We feel that these issues are best dealt with only after some period of experience with both the proposed new license and a completely code free licensing structure give us more insight on the best way to proceed. This intermediate stage may take a while to properly evaluate. These issues may be best addressed at the time that reallocation of the 40 meter band (per decisions made at WRC 2003) takes place. According to the present schedule, that is not likely to happen sooner than 5 or 6 years from now. By that time, we will have accumulated enough data to tell us whether additional adjustments are in order, or not.

OK, there you have it, the "master plan". Will it actually turn out this way? Probably not. Just as there are thousands of hams, there will be lots of

suggestions, pro and con, about which is the best way to go. When (and if) a petition is filed, and a Notice of Proposed Rule Making (NPRM) is posted, offer your comments and suggestions.

N2EY: That last sentence sounds like you are saying that no one except NCVEC should file a petition, or comment, until an NPRM is posted by FCC. I hope I am mistaken in that interpretation.

KL7CC: The FCC will consider all sides before changing anything. If a majority of comments indicate that hams want thing to stay the way they are, then that's what will happen.

N2EY: That is not what happened with the Restructuring NPRM (98-143). The majority of comments wanted 2 or 3 code test speeds, but FCC went with just 1 code test speed. The minority opinion was accepted by FCC and the majority opinion rejected. Perhaps it will be different next time. But there is a precedent for FCC to reject majority opinion.

KL7CC: If hams want change, and their arguments make sense, then that's what will happen. In almost no other country in the world are the governed given the chance to affect the rules that do the governing. Use that power if you wish. But don't just sit there and complain if you don't act.

A few final words:

There are no black helicopters.

N2EY: I do not place any credibility in conspiracy theories.

KL7CC: This is not a plot by ARRL or Fred (W5YI) or anyone else to sell more books, antennas, radios, or (fill in the blank). Yes, ARRL will gain some new members, the W5YI group will sell a few more books, and possibly some of the manufacturers and vendors will peddle a few more sets. Is this bad? How?

N2EY: It's a bad thing if quality is sacrificed as part of an ill-fated quest for quantity.

Suppose the numbers do not increase dramatically - will NCVEC admit they were wrong and petition to put back the old system?

KL7CC: It looks like growth of our beloved hobby from here.

N2EY: It looks like some good ideas and some bad ideas from here.

KL7CC: By the way, did you know Fred sold his company some time back? He does not particularly stand to gain anything from this effort, nor do any of the other committee members. Do you suppose the committee members just want to see our wonderful hobby prosper? Wouldn't that be an odd reason for doing what they are doing?

N2EY: I don't know any of the committee members personally, nor do I assume anyhting about their motivations. The mere fact that someone wants the ARS to prosper doesn't mean their ideas and proposals are good ones.

KL7CC: Just thought you'd like to know. Thanks for taking the time to read this somewhat long explanation, and in the truest sense, 73.

Thanks you for reading my rebuttal

73 de Jim, N2EY

Respectfully submitted by Jim Wiley, KL7CC

With assistance from Fred Maia, W5YI, and Scott Neustadter, W4WW
++++++++++++++++++++

N2EY: A few closing observations:

All of the above seems focused on the idea of "growth in the ARS" - specifically, getting more new hams. The license tests in general and the code test in particular are being cited as causes of low growth. The above discussion seems to promise lots of new hams if the code test is dropped and the entry level license requirements reduced. What if the proposed changes are made and there is no significant long term change in growth?
Will we revert to the previous system?

Back in 2000, code testing was reduced from three speeds to one (5 wpm) and the written test requirements reduced considerably. There was an initial surge of new hams and upgrades, but in the 3-1/2 years since the changes were made effective, the number of US hams has only grown by about 10,000. The growth rate now is about the same as it was before the changes.

What is being overlooked in these discussions are other factors limiting the growth of the ARS. These factors have far more impact than the license tests, code or written. Two factors come immediately to mind: Lack of publicity about the ARS in the mainstream media, and CC&Rs making the installation of an effective amateur station too difficult for many prospective amateurs.

Thank you for reading my comments.

3542. Response to "21st Century" Part Two (Communicator License)

Newsgroup: rec.radio.amateur.policy
Date: 2003-11-30 13:28:29 UTC
From: n2ey@aol.com
Message-ID: <20031130082829.15462.00004619@mb-m06.aol.com>
Source record: 83119

This is a response to the paper "Amateur Radio in the 21st Century", prepared by Jim Wiley, KL7CC, with assistance from other members of NCVEC working on changes to the US Amateur rules. This response is intended to evaluate and constructively comment on the merits of the various ideas and changes presented in the paper, regardless of their source.

For purposes of clarity and brevity, the introductions and executive summaries are not reproduced here.

"Part One" dealt with the code test. "Part Two" and "Part Three" deal with the proposed "Communicator" license.

Since the style of the paper is conversational, I inserted my comments into the original paper in the same style, so that the paper reads like a conversation between KL7CC and myself. My comments are preceded with "N2EY". The main text of the original paper is preceded by "KL7CC".

Here is my response to "Amateur Radio In the 21st Century" (Part Two)

KL7CC: OK, what about that new license class - why in the heck are we even thinking about it at all?

Let me give you a chill. Think, seriously, for a moment what this means: For every ham under the age of 20 we are attracting, 2 (or more) hams over the age of 50 either die or leave the hobby. Hmmmmm. It shouldn't take a genius to see where that is going. In 10 years, we may not even have ham radio. Wait! Wait!, you say, I'm only 45 (or whatever age you are), and I'll be around longer than that. Great - but there might very well be no ham radio.

N2EY: Where do these statistics come from? The total number of licensed hams has been growing since the late 1960s. Right now the FCC license data base shows well over 680,000 US hams. When I started out in 1967 there were only about 250,000 US hams. How many do we need to make amateur radio viable?

What about the age group from 20 to 50? Are we not getting any new amateurs from that age group?

The total number of US hams is at or near an all-time high. How many is "enough"?

KL7CC: Why? You think I'm kidding, right? What is the fastest growing sector of our economy today? The answer is Information Technology (IT). And what does IT need to succeed and grow? Interconnection, that's what. And increasingly, wireless interconnection. And what does wireless interconnection need? Spectrum. Radio spectrum -- Lots of it. And who has lots of spectrum, most of it unused? Go to your bathroom and look in the mirror. That's who. Now, what happens to that spectrum when (not if) you become a silent key - and

there is no one to take your place?

N2EY: And what spectrum do the IT folks want? VHF/UHF/microwaves - and all of the amateur bands in that part of the spectrum have been wide open without any code test requirement for more than 12 years.

All of this discussion is about access to amateur HF/MF, not VHF/UHF. The IT folks want, and are getting, more VHF/UHF space.

KL7CC: What happens when there are so few hams that we become insignificant? What happens when there are so few hams that manufacturers can no longer afford to amortize the engineering costs needed to bring you a new radio?

N2EY: I repeat - the number of US hams is at or near an all-time high. Over 680,000 - that's triple what it was in the late 1950s. There is a wider variety of amateur gear available today than ever before, and in inflation-adjusted dollars it's far less expensive than in the past.

KL7CC: Oh, pardon me - you always build everything from scratch?

N2EY: Yes - or from kits, or I restore older gear. Is that a bad thing? Am I somehow a problem because I don't buy my rigs from Japanese manufacturers?

KL7CC: Great! Who, exactly, are you going to talk to?

N2EY: Other hams, same as I have done for decades.

KL7CC: Most of the rest of us opt for the practical approach, and purchase a rig from one of the several companies that cater to hams. If there are no manufacturers, then there are no new rigs. Hard to carry on a QSO if no one is there.

N2EY: "Practical approach"? You mean you think amateurs can't build their own equipment anymore? If that's true, how can we hams possibly justify our existence as a "fundamentally technical service"?

KL7CC: One of the primary goals of the new license we are going to propose is a true entry-level ticket. Limited power, limited frequencies, but still useful, with enough of the essence of Amateur Radio to attract beginners and show them what lies ahead when they upgrade. Simpler exam. WAIT! - - WAIT! - - WHAT WAS THAT??!!

Yes, I said simpler exam. Hopefully 20 questions. Aimed at a young person aged 12 or more. That means a 6th grade education. Also fits teens, high schoolers, home schoolers. You know, fresh ideas, new blood, people that can actually see their radios without having to put on glasses - what a concept! 20 questions, simple enough to get someone started in a responsible way, pointed in the right direction, all that stuff.

That sure sounds like "dumbing down", doesn't it? Keep reading.

N2EY: It doesn't sound like "dumbing down" at all. It sounds exactly like the old Novice license concept. An entry level license with limited privileges that's easy to get. So far so good.

The current and previous license tests have been passed by young children. I know of a six-year-old who passed the General and an eight-year-old who passed the Extra - the OLD extra, with 5 written tests and 20 wpm code. Granted, these were very bright young people. But their example makes it a bit harder to accept the idea that the current 35 question Technician test is above the level of a 12 year old's ability.

KL7CC: Here is what we are thinking, and some of the rationale behind it. We, however, don't have all the good ideas, in fact we may not even have most of them, so input from others is welcome. Make that rational input. Invective and obviously impractical stuff will get filed immediately in 13.

First consideration: Lower power. 2 reasons. First, everyone at the recent NCVEC meeting expressed concern about letting brand new hams loose with 1500 watts of VHF or UHF. That's dangerous, no doubt about it. Cook your neighbor's cat type stuff. Not funny. So, we are thinking about a license that allows enough power to be useful, but not enough to be unsafe. It turns out that 50 watts above 24 MHz and 100 watts below 24 MHz allows hams to operate without having to worry about RF safety issues or evaluations. Transmitters at those power levels are presumed safe. If there are no RF safety issues, then there is no need to ask questions about those issues, and we can have a smaller exam. Second, those power levels represent the vast majority of commercially manufactured (or kit) radios offered for sale. The 100-watt HF set is everywhere, and very few VHF/UHF mobiles exceed 50 watts. Yes, some sets run more power, but the overwhelming majority meet the 100W HF / 50W VHF standard.

N2EY: OK, fine - and most amateurs don't run much more power than that, anyway. Staying under the RF exposure evaluation limit takes a lot of questions out of the pool.

KL7CC: Another idea: Restrict radios (for this license class only) to a maximum of 30 Volts on the final stage. Why? 30 volts is the generally accepted point that defines the split between low and high voltage. Virtually all-solid state sets use less than 30V on the PA stage, most being, of course, 12 volts. Less chance of an inexperienced ham injuring him or herself. Oops - no vacuum tubes! OK, we know that. Also lets out lots of used gear. We know that too.

N2EY: Also no line-powered equipment - it has 110 AC in it. No antenna tuners - they may have high voltages present when transmitting.

The voltage-limitation thing is a very bad idea. Not only is it overly limiting, it's unenforceable. Worse, it does not guarantee that inexperienced hams won't hurt themselves. The power supply for a 100 watt solid state amateur transceiver is typically 13.8 volts at 25 amps or so. Get a tool, wire or piece of metal across that 13.8 volt line and see what happens.

And while 100 watts of RF is not considered an RF exposure hazard, direct contact with it can be very hazardous to your health.

The 100W/50W power restriction makes sense. The 30 volt restriction does not. Forget about it. You might as well propose requiring licenses for personal computers - they have high voltages inside, particularly the CRT-type monitors.

KL7CC: All a ham has to do is upgrade, and the restriction goes away.

N2EY: If it's no big deal, why do we need a new entry-level license?

KL7CC: However, to upgrade, he or she must pass another test, which involves, among other things, RF safety questions, power safety questions, and other appropriate stuff. Remember that we are aiming this entry-level ticket at 12 year olds. Do you have kids? Grandkids? Wouldn't you be happier if their new radio had very little chance of harming them? I would.

N2EY: The 30 volt restriction won't protect people from hurting themselves. There's no license required to work with 110 volt house current.

KL7CC: Remove some of the math.

N2EY: There's no need for math above the 6th grade level in an entry level test.

KL7CC: Remove some or even most of the "radio law" type questions.

N2EY: Removing any of the questions on applicable regulations is simply unacceptable. If there is ANY subject which MUST be part of an amateur license exam, it's the applicable rules and regulations. No exceptions for any license class.

However, the privileges of the new license can be such that the applicable regulations are not very extensive. If the privileges are kept simple, the rules questions are also simplified.

KL7CC: Instead, require applicants to sign a statement that they have read the Part 97 rulebook, and that they have a copy (available for free via web download). Yes, some of the applicants will "skate" - and not read it when they signed that they did. But, most will, and even among those that don't, eventually, probably sooner than later, they will get around to it. Some never will. That's human nature - we're not looking for saints, just people that can become productive hams.

N2EY: BAD IDEA! There are simply no other words for it.

If you will accept a signed statement from a 12-year-old beginner with no radio experience, why not take all of the radio law questions out of all of the written exams and simply require the same statement from all hams?

This idea is part of what made cb go downhill. It's a very bad idea. It's simply unacceptable.

In a word: NO! If they don't know the regs, they are not qualified to be hams. It's that simple.

KL7CC: The 35-question exam is shrinking. 20 questions seem in reach.

Take out one or two more theory questions. We're not making engineers, at least not yet. Put in a couple of additional practical questions about operating your radio. A poke here, a cut there, and we're done. A 20-question exam that covers all a beginner really needs to know. Finish up with a few words about how to find the information needed to advance one's

skills, how to find an "Elmer", and how to find more about the hobby on the internet.

By the way - the Novice license of old, the one that many of us used to get started - was a 20 question exam.

N2EY: And it later became a 25 question exam, and finally a 30 question exam. The number of questions isn't the biggest concern, it's the content. Leave in the regs and go for 25 questions.

KL7CC: For most of it's existence, the Novice exam had no questions about antennas, propagation, feed lines, or most of the other questions that the present "entry level" exam has. Yet, somehow, a great many hams who entered via that license became active, productive, vital members of the Amateur Radio community. How could that have been possible?

N2EY: Simple. Most hams back then started out with a shortwave receiver and listened to the amateur bands before they ever got their license. That's how most of us discovered amateur radio and learned the code. Many of us built our first receivers, learning a lot of theory in the process. By the time we went for our exams, all we needed was a transmitter to go on the air.

The old Novice by-mail license process was so slow that a ham could build a complete station while waiting for the various FCC paperwork processes. And because the old Novice was a one-time one- or two-year license, there was tremendous incentive to upgrade before the license ran out.

KL7CC: Take a moment to think back. I'll be willing to bet you didn't just drop out of a tree all ready to go, knowing everything that you know about ham radio today, did you?

N2EY: Nope.

KL7CC: It took time; study, listening to other hams, all the rest, to get where you are today.

N2EY: Sure. Now, how do we make sure that sort of thing keeps on happening?

KL7CC: Were you nervous on your first contact? Did you get over it? Did you make a couple of dumb mistakes; maybe even accidentally violate the rules once, or maybe even twice? These people will too. It's called learning.

N2EY: Sure - but it is essential that they know some basics before getting the license and going on the air. The old Novice limited us to small parts of a few bands, 75 watts input, and crystal control. Oh yes - and Morse code only.

KL7CC: What do you think is better for our hobby - lots of enthusiastic newcomers, or an ever-declining number of increasingly older hams? Answer the question honestly, not just in light of your favorite band getting more crowded.

N2EY: Newcomers of all ages are always needed - and welcome! But we need to insure that newcomers know certain basic things before they are granted a license. The privileges granted should match the testing required.

This is not a trivial matter. We amateurs enjoy unprecedented and unequalled freedom compared to other radio services. Our rules are relatively simple, our choice of bands and modes enormous, and we are allowed to use non-type-accepted and non-certified equipment on the air at considerable power levels.

This freedom carries with it the price of responsibility, which means knowing the rules and following them. It means behaving ourselves on the air without a lot of enforcement from FCC. And it means not interfering with other services or each other when such interference can be avoided.

KL7CC: And another thing - if the bands get more crowded, doesn't that help make a case for increased spectrum? And guess what? All those new hams vote (or will soon enough), and Congress pays attention to numbers. Numbers become very important when we are in competition with commercial interests for spectrum space.

N2EY: How many amateurs are "enough", then? We have over 680,000 hams in the USA today, at or near the all-time high.

Compared to the total population of the USA, we are a small group - and that is not going to change no matter what the license requirements are, because radio as an end in itself does not interest everyone.

KL7CC: And maybe the prices of new radio gear will decline, if manufacturers can spread fixed costs over a larger sales base. And maybe some brand new manufacturers will be encouraged to bring something to market. Will that be bad?

N2EY: Amateur equipment costs less in inflation-adjusted dollars today than at any time in the past. There are more manufacturers and a wider variety than ever before - including kits and homebrew parts suppliers.

KL7CC: OK, now we've got a brand new ham.

N2EY: Maybe. You haven't explained how you're going to get more people to know about amateur radio by simply changing the requirements for an entry-level license.

KL7CC: Whether we call them a "Communicator", or some other name, what's next? Where are they going to operate? Are you going to get run over by a horde of newcomers? Help! I'm sinking in a sea of QRM!

Ahem. We have a plan. It probably won't turn out to be exactly the way things come down, but it's a start. Someone else may very well come up with a better suggestion. That's OK, too.

Whatever we come up with, it will have to fit within the FCC budget. This probably means that in all likelihood what will happen, assuming that the idea of a beginner's class license is even accepted at all, is that they (the FCC) will juggle the existing 3 classes to accommodate the new structure. Technician will change from what it is now to the basic license. It may be named "Communicator" or simply left as Technician. Let's assume it gets the name "Communicator".

N2EY: The FCC database currently maintains six different classes of amateur license. FCC seems to have no problems with maintaining 3 old classes of license that are no longer issued to new hams.

Since the proposed "Communicator" is really just a 21st century version of the old Novice, just reopen the Novice to new issues and close off the Technician. Existing Novices could get the new "Communicator" privileges so there is no difference between "old" and "new" Novices.

KL7CC: All existing Techs will be upgraded to General.

N2EY: Why?

KL7CC: Assuming that the Morse requirement is removed first, our opinion is that most of the Techs will take (and hopefully pass) the element 3 exam as soon as they can, thus becoming General class licensees.

N2EY: If that happens, there is no reason for a free upgrade. If it doesn't, Techs can always upgrade to General by taking the required test.

Recall that a free upgrade of existing Novices and Technician Pluses to General was proposed by ARRL in 1998 - and soundly rejected.

KL7CC: Remember, that before the changes that created the present no-code tech, the General and Tech exams were identical.

N2EY: This is not correct! The General and Technician shared the same written exam until March of 1987 - four years before the Tech lost its code test.

KL7CC: Only the code separated them, and even there it was only the difference between 5 and 13 WPM.

N2EY: As the rules stand right now, all pre-March-21-1987 Technicians get credit for Elements 1 and 3 (5 wpm code and the General class written test) - even if they let their licenses expire!

There is no reason to hand out free upgrades to Techs who have not passed the General written. Those Techs who have passed the General written need only provide documentation (old license, old Callbook page, data retrieved from old databases) and they can get a General with no additional testing.

Is the current 35 question General class written exam so difficult?

KL7CC: All Advanced licenses will be upgraded to Extra, and if there are any remaining Novice tickets out there, they will become "Communicators". Now we have 3 classes: (1) Communicator, (2) General, and (3) Extra.

N2EY: Again - WHY? All existing Advanceds are able to upgrade to Extra by taking Element 4 - no additional code.

KL7CC: The exams will be adjusted to combine element 2 and 3 into a new element 3, probably with a 50-question exam, using the existing pools. Element 1 (Code) disappears. A new Element 2 is created, which becomes the Communicator exam.

N2EY: OK so far.

KL7CC: Element 4 remains as is, or maybe becomes even harder, in the event we (all hams) indicate that the extra exam should really be a test that "separates the men from the boys" (apologies to the YL's - JW). Many would agree that this is already the case, and that no changes are required here.

N2EY: The third-grader who earned the Extra was an 8 year old girl at the time.

KL7CC: Kind of sounds like a bunch of folks are going to get something for free, something that you might have worked hard for, doesn't it? How can we justify this?

N2EY: The simple fact is, you can't justify it. Is there really a problem maintaining the existing license classes in the database? What is the urgency of combining license classes that are no longer issued to newcomers?

The instant upgrade scenarios also create the problem of "bargain hunting" among newcomers because the changes will be discussed and announced long before they become reality. So a new ham could get a Tech before the change occurs, then simply get a free upgrade to General when the change happens. Same thing with existing Techs and Advanceds - just wait for the change. What would be created is a disincentive to learning more and passing the tests for the next higher grade of license, because if they just wait a bit they'll get a free upgrade. Not a good thing from a license structure that it supposed to encourage learning!

KL7CC: Well, maybe it won't happen that way at all. Maybe instead of "instant upgrades", the Techs will have to pass their element 3 exam or be downgraded to Communicator licensees, and Advanced licensees will have to pass element 4 or be downgraded to General. That goes in the face of our desire to have this whole thing take place with no net loss to any existing licensee, but if enough people object to the idea of "free" upgrades, then there is one alternative (but probably unlikely) solution. Another is to continue the Technician and Advanced licenses "as is", until they upgrade. Maybe even make upgrading mandatory for renewal. Using that plan, they will all either upgrade or disappear within 10 years, with no further effort on the part of the FCC.

N2EY: There's no reason to force upgrades or give free ones. FCC has maintained a 6 class database with 3 'dead' classes for 3-1/2 years now - what's the problem? What's the urgency to force all hams, new and existing, into just 3 license classes?

If you want a new entry level license, here's how to do it with minimal problems:

Reopen Novice with new test and privileges proposed for "Communicator".
Close off existing Technician to new issues.
All Technicians get "Communicator" privileges on HF/MF
Old Technician and General writtens combine into a single written test of about 60 questions
Everybody can keep their existing license class, callsign and privileges except that the Novice/Tech HF privileges are made the same as "Communicator".

Simple and easy. No big changes for existing hams nor rules. No instant upgrades or license class changes.

KL7CC: OK, now the license classes have been tuned up, and the exams adjusted, what's next?

We need some place where these new licensees can get their feet wet, where they can participate in Amateur Radio in a meaningful way. All of ham radio, not just local repeaters.

N2EY: Do you think VHF/UHF is just local repeaters? That's simply not the case.

KL7CC: What we need is a few spare kilohertz.

N2EY: Why?

KL7CC: I wonder where we can find some? New band? Probably not. So, what do we have that can be reworked to fit our need? How about the present HF novice bands?

Suppose, just for a moment, that a petition got filed requesting that the FCC make the following changes: Take the present HF Novice bands on 80, 40, 15, and 10 meters and reassign them to voice operation. Move the corresponding phone segments down by the appropriate amount. Change the segments open to various classes of license to fit, and let the new "Communicator" licensees have access to the HF bands in 50 or 100 KHz blocks. For example, and this is just an illustration, 40 meters could end up looking something like this:

7000 - 7025 Extra, CW and data only
7025 - 7100 All classes, including communicator, CW and data only
7100 - 7150 Extra, all modes
7150 - 7250 Extra and General, all modes
7250 - 7300 All classes, including communicator, all modes

Similar adjustments would be done at 80, 15, and 10 meters. Actually, 10 meters is already pretty much set and ready to go. We might do only 50 KHz on 15 meters, leaving the other 50 as a "DX window". There could be, or not be, consideration of allowing communicators on the other HF bands (160, 30, 20, 17, 12). Not too sure what to do about the new 60-meter band yet. Have to think about that one for a while. Perhaps we start here (with 80, 40, 15, and 10), and after a few years experience, revisit the issue and decide whether granting access to parts of the other HF bands is a good idea or not. Time will tell.

In other words, what we will have done is to "slide" the phone bands down the equivalent amount of the former novice segment, and allowed the new communicators access to the top 50 KHz of the voice band. Traditionally, higher-class licensees have been given access to the lower frequency segments within a band, and this would remain true.

N2EY: Very bad idea. There is no need for more 'phone space on HF. Such a plan robs the spectrum-efficient modes and favors the spectrum-inefficient modes.

Look at the 40 meter plan proposed. It acts as a disincentive to use CW and data, by increasing crowding of those modes and driving the Region 2 DX phones even further below 7150. The same thing will be true of Regions 1 and 3 when they get 7100-7200.

In addition, there is not much incentive for the Communicator CW or data operator to upgrade unless he/she wants more power or the lowest 25 kHz - and those lowest 25 kHz require an Extra.

What Communicators need is a good assortment of bands and modes to start out with, and a reason to upgrade. At the very least, slices of all HF/MF bands should be included. 30, 17 and 12 meters are so narrow that it makes sense to give Communicators all of them (at the appropriate power level). This results in less crowding and more flexibility.

Here's 40 for an example of how to handle the non-WARC bands:

7000-7150 CW and data only, 7150-7300 CW, analog phone and image

7000-7025 Extra only
7025-7050 Extra, General, Advanced only
7050-7150 All classes of license
7150-7225 Extra and Advanced only
7225-7250 Extra, Advanced and General only
7250-7300 All classes of license

KL7CC: No one loses anything!

N2EY: Yes, they do! The CW and data operators get squeezed and the 'phone operators rewarded for using modes that take up a lot more spectrum. That's just wrong.

There is no reason to widen the 'phone/image bands if the newcomers are allowed enough space on each band. It's a mistake to limit Communicators to just 80/40/15 and 10, particularly as the sunspot cycle declines.

KL7CC: Generals and Extras get some new phone bands, even former Novices, (now upgraded to Communicator) get more room in the CW segment, and access to a portion of the phone band.

Communicators operate with their 100-watt limit, General and Extra can use 1500 if they wish. Again, no one loses!

N2EY: The current power level allowed to Novices and Tech Pluses on HF is more than 100 watts.

KL7CC: No hassle like many of us remember over "incentive licensing" all those many years ago.

N2EY: Trust me - there will be hassles. The free upgrade idea will cause a lot of them.

KL7CC: If a "Communicator" wants to run more power, he or she simply upgrades to General, and away they go. We (hams in general) might decide that voluntary power restrictions in the "communicator" segments are appropriate, but time will tell. That is another issue, not part of the 3-part plan we are working on.

VHF and UHF privileges would be given to the communicator licensees. We are suggesting 50 watts max for the bands 50 to 450 MHz inclusive, with no operation on the higher UHF or microwave bands.

N2EY: The power limit makes sense.

KL7CC: An alternative solution, which has been adopted in other parts of the world, would be to grant Communicators the same frequency privileges as Generals, but with the lower power limits discussed above. The United Kingdom has implemented this approach in their Foundation license, which has become the fastest growing license in the UK's history.

N2EY: The UK system is very different from ours once you get into the details. For example, all UK licenses require taking an approved amateur radio training course before the license tests are taken. No exceptions, even for a Ph.D. in EE who can do 50 wpm Morse. And the UK writtens are not 20-35 questions from a published pool.

Do you want a system where every new ham has to go through an approved training course? Why not? That's a core part of the UK system.

Granting full General privileges but limited power is not a good idea, either. If the power limit is set fairly high (say, 100/50 watts) then there is less incentive to upgrade because most US hams don't run much more than 100 watts. If the limit is set at QRP levels, new hams are at a severe operational disadvantage, particularly if they have to use compromise antennas.

KL7CC: Will anyone have any problems with these proposals? Of course. Inevitably, it will turn out that someone's favorite net is in the "communicator" area. Maybe the net members will decide to move, maybe they will stay where they are and attract hundreds of new members. Someone's favorite spot will suddenly turn out to be open to new modes. OK, so what? Where does it say that anyone is given exclusive rights to one particular spot or another? Pretty much every radio available today has a VFO. Use it. You might even meet a new friend or two.

N2EY: It is important to have incentives to use more spectrum-efficient modes, like PSK-31 and CW. Widening the 'phone bands reduces those incentives.

(continued in Part Three)

Source record: 83118

This is a response to the paper "Amateur Radio in the 21st Century", prepared by Jim Wiley, KL7CC, with assistance from other members of NCVEC working on changes to the US Amateur rules. This response is intended to evaluate and constructively comment on the merits of the various ideas and changes presented in the paper, regardless of their source.

For purposes of clarity and brevity, the introductions and executive summaries are not reproduced here.

"Part One" deals with the code test. "Part Two" and "Part Three" deal with the proposed "Communicator" license.

Since the style of the paper is conversational, I inserted my comments into the original paper in the same style, so that the paper reads like a conversation between KL7CC and myself. My comments are preceded with "N2EY". The main text of the original paper is preceded by "KL7CC".

Here is my response to "Amateur Radio In the 21st Century" (Part One)

N2EY: I'm a longtime active amateur, licensed 36 years. I was first licensed at the age of 13 in 1967, and in less than three years had reached the Extra class license. Amateur radio led me to earn bachelor's and master's degrees in electrical engineering, and to an EE career.

KL7CC: Some of the thought processes, and the reasoning behind them:

Lets consider the matter of the Morse code. Even before anything else, keep in mind the fact that every person on the committee that drafted the NCVEC petition, now known as RM-10787, to remove the Morse code requirement, and also every person on the committee that is working on the new entry level license, is a "20 WPM" Extra class licensee. And, most if not all of them would list Morse as one of their favorite modes, if not indeed the favorite mode. My own favorite modes, in order, are Morse, AM Phone, SSB, and VHF FM. I also operate occasionally on other modes, such as RTTY, packet, satellite, and I am thinking about learning how to use PSK31. DXCC? Yes, about 200 officially, with another 60 or 70 worked but not submitted yet. Most of them were on Morse Code. One of our committee members, Fred, W5YI holds DXCC- CW only. Another, Scotty, W4WW holds 5 Band DXCC and has been on the DXCC Honor Roll. John, W3BE, uses CW almost daily, using it for traffic handling and chasing DX.

So, there are no "Morse code haters" on the committee. There is no conspiracy, no secret agenda, no kickback from the manufacturers, no "black plan" from the ARRL, no anything. Just some guys that want nothing more than to see our great hobby prosper for the next hundred years, or longer.

N2EY: That's good to know. However, these ideas need to be considered on their merits, not on the personalities of those who wrote them.

KL7CC: Will dropping the Morse requirement remove a "filter" that keeps out poor operators, "CB Radio" types, scofflaws, and so on? I think not. Listen to 75 meters on any given evening, or 20 meters above 14300 during the day, and all too often what you hear is a cacophony of indecent language, illegal operation, intentional interference, music, poor sportsmanship, you name it. And every one of those characters passed a code test! Whether it was 5 or 13 or 20 WPM, they all passed a test. Some filter, huh?

N2EY: There are several problems with that line of thought:

First, no test will ever be a perfect "filter" of "bad apples". Particularly not a one-time test, often taken decades ago. That doesn't mean there is no filtering effect at all, just that it's not perfect.

Second, all of the violators you hear - indeed, all amateurs of any license class - also took and passed several written tests to get their licenses. The written tests have always contained questions about permissible on-air behavior. If any test can be a "filter", shouldn't we expect those written tests to have filtered out the "bad apples" even more so than the code test? Yet you do not say "some filter, huh?" about the written tests. You do not propose eliminating the written tests, even though it should logically be the written tests' job to filter out such "bad apples".

Third, what mode are the violators using? It's not Morse code! They're almost all on voice modes. Look at any listing of FCC enforcement actions, and you will see that the overwhelming majority of behavior-type violations are by hams using voice modes. The discrepancy is much, much more than can be explained by the relative popularity of various modes. When was the last time FCC had a similar enforcement problem with hams using Morse code?

Some might try to explain the discrepancy by saying "it's easier to behave that way on voice". Maybe that's true - but so what? If a mode somehow promotes better on-air behavior, isn't that a reason to support that mode?

Fourth, if you think some of the HF stuff is bad, look at some of the recent FCC enforcement actions against hams using VHF. For example, four amateurs in the 4th call district were recently cited for making illegal transmissions on police frequencies. If that's not bad enough, a few months ago, there was the case of the new amateur who made false distress calls on a VHF marine frequency using a modified amateur transceiver. These weren't "newbie mistakes" - they were deliberate and repeated violations, using voice modes and modified amateur equipment. Read the FCC enforcement letters - they're not a good advertisement for the ARS.

KL7CC: Will removing the Morse requirement let in some "bad apples"? Yes, it will. But I firmly believe the number will be very small in comparison to the gain our hobby will receive from decent, law abiding, talented, and enthusiastic new hams. Just as letting code free new hams on to our VHF bands has not, for the most part, resulted in chaos, the same will be true of our HF assignments.

N2EY: The dropping of the code test for the Tech license in 1991 did not result in a large, sustained growth increase in the number of hams, either. Compare the growth in the 1980s with that in the 1990s. There was a surge of new hams

after the code test was dropped for Technician in 1991 - and then the growth rate dropped back to only slightly more than what it was before.

Since the reduction of the code test to 5 wpm in 2000, the total number of US hams has grown by less than 10,000. That's less than 2% in 3-1/2 years. If the 5 wpm code test is removed, and growth in the 3-1/2 years following is less than 2%, will the code test be put back?

KL7CC: It will be up to us, as the "experts", to guide newcomers, passing on the traditions of our hobby, the skills and operating techniques that make up a ham that we can all point to and say "that is a good operator".

N2EY: That has always been the case. But there is only so much that Elmering can do - otherwise, we wouldn't need licenses at all, just Elmers.

KL7CC: Will Morse code go away? Probably not in our lifetimes. Remember that Morse code is still the easiest way to get on the air, the most effective means of communicating under poor conditions, and where most of the DX will still be.

N2EY: That alone is justification for a basic test of Morse code skill.

KL7CC: We are not making Morse Code illegal; we are just making it equal to any other mode that hams might enjoy. We don't have special tests before a ham can operate SSB, or RTTY, or SSTV, or any other mode, so why for Morse code?

N2EY: Because only Morse Code requires a skill that most people do not possess before getting an amateur license. And it cannot be learned by reading a book, watching a video, or passively attending a few classes. The Morse code test cannot be passed by memorization or word association of a published pool of questions and answers.

Morse code is also the second most popular mode on amateur HF/MF, far ahead of the data and image modes and only slightly behind SSB voice.

But Morse code is only useful if an operator has acquired the skills to use it.

KL7CC: When most operators (admit it, it's true) operate voice or data.

N2EY: It's also true that most operators also use manufactured equipment. Shall we remove the theory questions from all of the written tests because most hams don't build their own equipment? Which is more popular among hams - building ham rigs or operating using Morse code?

KL7CC: Morse will probably retain most of it's exclusive band segments, at least for now.

N2EY: There are NO exclusive band segments for Morse in any of the HF/MF amateur bands. The only exclusive band segments for Morse code are, ironically, the lowest 100 kHz of 6 and 2 meters. All of the non-phone subbands on amateur HF are shared with data modes. They are CW/data subbands, not exclusive band segments.

KL7CC: We are not addressing this issue at this time. This may change in the future. Several countries no longer have exclusive segments, but depend instead on voluntary band plans.

N2EY: Other countries (except Japan) also have far fewer radio amateurs than the USA. Crowding of the HF amateur bands is much less of a problem in the rest of the world.

KL7CC: In fact, our 160-meter band works this way today, with surprisingly few problems.

N2EY: There are also relatively few amateurs on 160 meters at any given time, due a number of factors such as the relatively large antennas needed. The lack of mode and license class subbands on 160 is a result of the fractured nature of the band when it was shared with LORAN.

KL7CC: Remember that when Ham Radio started, Morse code was all there was. It wasn't even CW - we all used spark gap transmitters!

N2EY: Who is "we"? I wasn't on the air back in the spark days - were you?

N2EY: Besides, that state of affairs ended with World War 1. When amateurs were allowed back on the air in 1919, some of them were using "CW" (tube oscillator) transmitters instead of spark. Some of them began using voice modes - in fact, the very first broadcasting stations were amateur stations.

KL7CC: One of the justifications for Amateur Radio, from the government's point of view, is that we continue to lead, or at least follow closely behind, advancements in the "state of the art" of electronic communications. That means advancing, not standing still.

N2EY: What, exactly, is meant by "advancing, not standing still"? Does it mean amateurs must stop doing what they think is best for amateur radio because of changes in other services? For example, should amateurs stop using HF for point-to-point nonemergency communication between fixed stations because almost all other radio services have done so? That has been other radio services' "advance", yet hams have "stood still" by still using HF for routine, point-to-point (fixed) communications.

KL7CC: And by the way, the only reason there was ever a Morse requirement for Amateur licensing in the first place is because of spark transmissions.

N2EY: This is incorrect. The Morse test requirement for amateurs was not even a part of international regulations until 1927 - long after amateurs had stopped using spark.

KL7CC: It was necessary for amateurs to understand the code so that they could be told to stand by in case their transmissions were interfering with critical government traffic, perhaps involving safety of life. Spark, by its very nature, covers up a lot of frequencies - thus putting everyone, hams and government alike, effectively on the same channel.

N2EY: Again, that state of affairs ended with World War 1, if indeed it ever existed. The introduction of tuned receivers and the assignment of specific wavelengths for different services effectively ended that situation by 1912. Remember "200 Meters And Down"? Amateurs were not allowed on marine or government wavelengths after 1912. Spark was outlawed for hams in 1927. Hams had abandoned it years before then. Yet the code tests remaincd long after.

KL7CC: By the way, most hams use the terms "CW" and "Morse Code" interchangeably, but if a person were to be picky, they are not the same. CW means "Continuous Wave", or a continuous, unmodulated signal. Spark emissions used a "damped wave", with a "high decrement", rich in harmonics and with wide sidebands, which caused great amounts of interference. CW transmissions, on the other hand, are restricted to a single frequency, or at least to a very narrow range. Morse code, as used in most Amateur Radio situations, involves keying a CW transmitter on and off in specific patterns, which we recognize as letters, numbers, punctuation, and other symbols. However, to simplify things and save on space, I will also use the terms interchangeably, as most Amateur Radio operators do in everyday usage.

Will we lose something because we will no longer have the knowledge that all hams can at least understand and send CW, even if very slowly? Maybe, maybe not.

N2EY: We have already lost that knowledge. It happened more than a dozen years ago.

KL7CC: You would be surprised at the number of applicants I see that actually want to learn CW - they think it will be fun. There's a novel concept - someone learning a skill because it is fun, not because the government says you must do it.

N2EY: It's neither a surprise nor a novel concept. Will you also apply the same criteria to the written tests - that a person should not be required to learn anything they are not immediately interested in?

KL7CC: Well, OK, that is all well and good, you say, but are there any reasons we could offer that might support the idea of removing the Morse testing requirement, and what are some of the expected implications?

Obviously, removing the Morse test requirement will make it easier for thousands of interested persons to join our hobby.

N2EY: But will thousands more join? Eliminating the 13 and 20 wpm code tests and reducing the written tests from 5 to 3 has resulted in growth of less than 2% in the past 3-1/2 years. If the removal of the last remaining vestige of morse code testing does not result in significantly more growth, will the test be put back?

KL7CC: There are many, who for whatever reason have a real, not imagined, problem with learning the code. Call it stage fright, a psychological block, hearing problems, poor recognition skills, whatever you want; there are indeed those who literally cannot master the code, no matter how hard they try. Lazy, you say? Anyone can make it to 5 WPM, you say? They just don't try, you say?

N2EY: I don't say any of those things. Not ever.

KL7CC: Apparently you have not participated at hundreds of exam sessions. I have.

N2EY: How many hundreds? From when to when?

KL7CC: I have seen grown men and women with tears in their eyes, frustrated, angry, sometimes back next time, sometimes giving up on ham radio altogether. Where's the gain in having someone give up?

N2EY: What is the failure rate of the code test compared to the written tests? Does no one ever fail the writtens, or have extreme difficulty passing them? How many people have not been able to pass the 5 wpm code test after giving it serious study with modern learning tools?

If enough people who fail the Extra written come to you with 'tears in their eyes', will you petition FCC to eliminate the Extra class written test?

The 5 wpm code test is not "mastery" by any definition. It's learning a skill at the most basic level. The skill required is the ability to translate 43 sound patterns into letters, given 2.4 seconds per sound pattern. It's like learning to recognize 43 words in a new language, nothing more. And the test requires only the recognition of 25 of the sound patterns, not all 43.

KL7CC: Are you proud that you "made it"?

N2EY: Yes. Is there something wrong with pride of accomplishment? Should I be ashamed?

KL7CC: Can you not find something that another person can do that you would find extremely difficult if not impossible? Could you win the Tour de France bicycle race - even if you trained every day for the rest of your life? Could you invent the Laser? Could you paint the Mona Lisa?

N2EY: That's a completely invalid set of analogies. You are comparing world-class feats of excellence with the acquisition of a skill at an extremely basic level. 5 wpm is not equivalent to winning the Tour de France, or inventing a laser, or painting the Mona Lisa. It's more the equivalent of riding a bicycle at 5 mph for a mile on a level road, or assembling a flashlight, or painting a recognizable human face. Not everyone can learn to do those things, either.

Why do you exaggerate the difficulty of passing the code test?

KL7CC: Not that painting a work of art or riding a bicycle has all that much to do with radio, it's just to point out that while you may have been able to master the code with some degree of success, that doesn't necessarily mean that everyone has the same ability as you.

N2EY: Morse code, however, has a lot to do with amateur radio. Also, 5 wpm is not mastery.

KL7CC: I would argue that the ability to master the code has no apparent connection with how "good" a ham a person is.

N2EY: The same can be said of the written tests. Shall they be stripped down to the barest minimum, or eliminated entirely? They are not a 100% effective filter for "bad apples". There are some people who would make great hams who have real problems with math, with test phobia, with remembering details like band edges and electronic symbols. Why are they being kept out of amateur radio?

KL7CC: What we want, I think you will agree, is someone who will respect our traditions, follow the rules, bring enthusiasm and vigor to the hobby, and make a positive contribution.

N2EY: I agree 100% on that. How do we attract such people to amateur radio.

KL7CC: So, who's to say that mastering Morse code skills makes a better ham?

N2EY: Who is to say they do not? Either way, it's merely an opinion. Is it wrong, or electro-politically incorrect, to express such an opinion?

KL7CC: I would not be so arrogant as to think such a thing. Every time I get to feeling superior, I look around, and guess what? - - - I can find someone who is better at something, anything, than me. I can also name several individuals that I think are in one way or another "better hams" than I, better operators, better engineers, better at some aspect of our hobby than me. Might that be true with you too?

N2EY: Expressing an opinion on what the license requirements should be is neither arrogant nor feeling superior. It's just an opinion. Saying that Morse code skills do not make a better ham is just as arrogant as saying they do.

KL7CC: CW is a great mode. It's fun. I enjoy it. And, it's time to move on.

N2EY: What exactly does "time to move on" mean in this context? Should hams stop using Morse code? Why? What are we supposed to "move on" towards?

KL7CC: We no longer require applicants to draw schematic diagrams, demonstrate how to neutralize a triode vacuum tube amplifier, lots of other things.

N2EY: Schematic drawing was eliminated because they required a trained examiner to grade, and also because it was not a 100% objective measure. Neutralization questions were removed from the test because relatively few hams use transmitters requiring neutralization adjustments. The written exams have been revised over the years to reflect the technologies in general amateur use.

And a lot of hams today use Morse code. Particularly on the HF/MF amateur bands.

KL7CC: Lets be gentlemen and give CW a decent, respectful, wave. Remembering our old friend, but looking forward, not backward.

N2EY: What exactly does all that mean? You say "give CW a decent, respectful wave" and "look forward, not backward" - does that mean no more Morse code test, or no more Morse code?

KL7CC: Morse code will live forever. As long as someone cares about the history and mystery of early radio, and lots of hams do, CW will be around. Like anything else, when a person finds he or she has a need to use Morse code, they will learn it. Want to work DX, or QRP, or weak signal VHF, or Moon-bounce? Better learn the code, or you won't have a very satisfying experience.

N2EY: I hope that's true. But previously you wrote: "Will Morse code go away? Probably not in our lifetimes." Now you say it will live forever. Which is it?

What will you say to someone who wants to remove everything but the basic rules, regs and safety from the written tests? How do you answer a prospective ham who says "I don't need to learn all that theory and propagation and other stuff now, for any class of license - when I find I have a need for it, I'll learn it"?

KL7CC: Are we "dumbing down" amateur radio? Are you kidding? Have you looked at the new Extra class tests?

N2EY: Yes, I have. They're not very hard if someone knows a little about radio. They have been passed by grade-school children.

KL7CC: Could you honestly say you could pass one, picked at random, "cold"?

N2EY: Without reservation, I can honestly say "YES - I CAN!"

KL7CC: I couldn't, at least not without some serious study of the books.

N2EY: Why not?

Part of the understanding between the FCC and licensees is that we will at least keep current enough to pass the exams we expect others to take to become hams. With all due respect, if a licensed amateur cannot pass the current tests for the license they hold without serious study, then I think that amateur should reconsider whether they should be in a position to make amateur radio policy decisions. Just my opinion.

If experienced hams can't pass the current written tests for the licenses they hold, why must new hams be required to pass them? Sounds like a case of "do as I say, not as I do".

Do you begin to see why some folks use terms like "dumbing-down"?

KL7CC: I have been licensed since the late 50's, went through all of the steps, starting at Novice, and getting my Extra in the 70's. Even had a "First Class" commercial radiotelephone, with both the radar and aircraft endorsements - passed all the elements in one sitting, missed at most 3 or 4 questions on any given section - a couple were perfect. And, except for the Novice, did this while sitting in front of the FCC themselves, no less. Never flunked a FCC code or theory exam. Never. So what? That and a dollar will get me a cup of coffee. I learned about ham radio from my peers, from watching and listening, not from tests.

N2EY: It sounds like you're making a case to eliminate almost all testing, not just code. If the result of all that testing is a "so what", why should new hams have to do it?

I've been licensed since 1967, and Extra since 1970. There has never been a time when I could not pass the then-current license tests without any special preparation. I say "Bring 'em on!"

KL7CC: Will ham radio turn into CB? No, it won't.

N2EY: How do you know for sure? Nobody really knows what will happen. When FCC created 27 MHz CB in 1958, no one thought that it would turn out the way it did. How can you guarantee what will happen in the future?

KL7CC: In the first place, CB is essentially an unlicensed service. Secondly, there are still the written exams, and add to that peer pressure from other hams, and the fact that hams must use call signs, instead of "handles", and there is just no comparison.
It isn't even an "apples and oranges" argument - it's more of an "apples and cement mixers" discussion - there just isn't any common ground between the two services. Hams will literally refuse to talk to someone without a call sign - and a call sign removes the anonymity of CB.

N2EY: When CB was created, its users were required to obtain licenses and callsigns, and had to certify that they had read, understood, and would comply with all FCC rules of their service. Widespread disregard for the rules in the CB service caused FCC to give up on trying to enforce those rules, and ultimately to change them so that callsigns and licenses were no longer issued.

If enough hams misbehave on the air - and it doesn't take many to cause real problems - FCC will either have to shut down the amateur service or allow things to go the way they did with cb.

Hopefully this won't happen to amateur radio. But it did happen to cb, despite licenses, callsigns, clear FCC rules for the service, and much, much more FCC enforcement than has ever been expended on the amateur bands. In my opinion, the reason it happened to cb was simply that many cb users had no personal investment or commitment to their radio service. They simply didn't care to follow the rules, and FCC and the rules-abiding cb users were simply overwhelmed by sheer numbers.

How do we insure that most new licenses will have adequate personal investment or commitment to the ARS?

KL7CC: Break the rules on the ham bands, and you will get caught, and fined or even sent to jail.

N2EY: You cannot guarantee that. Neither can FCC.

KL7CC: We even have an "enforcer", in the person of Riley Hollingsworth, of the FCC's enforcement division. Riley and his helpers do an excellent job of keeping the ham bands clean, and his efforts in cooperation with Amateur Radio volunteers, such as the ARRL's Official Observer corps, do the job. Yes, he knows about the problems on 75 and 20, as well as elsewhere - and he is working on them as you read this. He has a problem common to all law enforcement types - he has to follow the rules, and the violators don't - but he will catch up with them in the end, trust me on that. I have visited with Riley one on one, and listened to him speak. He is a great guy, funny, personable, very sharp, and dead serious about his job. I surely wouldn't want him mad at me!

N2EY: The problems in certain parts of the voice subbands on 75 and 20 are of long standing. Where was FCC enforcement when those problems started? Why have they been allowed to fester for so many years? Riley is trying his best and doing great things - but he's only one person, trying to do an extremely difficult job.

You cannot guarantee that Riley will catch all of the trouble makers or even most of the worst ones. Particularly if their numbers increase. He's doing all

he can but his resources are finite. And the problems are not limited to 75 and 20 meters.

Most amateurs follow the rules not because they're afraid of Riley or the FCC but because they have a personal investment or commitment to the ARS.

And remember what modes almost all of those bad apples are using. It isn't Morse code!

Actually, most of them (coax, connectors, antenna tuning, SWR tests, equipment grounding, lightning protection, and RF exposure level estimates) were in the Novice/Technician question pool I studied (7/1/97~7/1/01 version). Just glancing through the question pool, here are some of the related questions I stumbled across...

N4A06 ~ N4A11 - Station & antenna grounding
T4A08 ~ T4A16 - Station & antenna grounding
N4C01 ~ N4C11 - SWR measurements
T9B09 ~ T9B12 - SWR measurements
N4A04 ~ N4A05 - Lightning protection
N9A09 ~ N9A13 - Antenna tuning
N9C01 ~ N9C12 - Feed lines (coax and others)
T9C01 ~ T9C03 - Connectors
N0B01 ~ N0C27 - RF Safety (exposure levels)
T0A01 ~ T0C22 - RF Safety (exposure levels)

The study guide I used (Now You're Talking!) pretty much covered the rest (waterproofing, ground radials, masts, guy wires, and so on). Of course, I then had to transfer that written information into real world applications.

> I've set up a complete Field Day station in
> much less than an afternoon. (snip)

Most of us have set up in remote locations, for various purposes.

> Again, almost none of the skills needed were
> on the license tests.

If true, you must have taken some really basic tests back when you got your license years ago. The test I took seems much more comprehensive than what you describe.

> quit using the word 'stupid'.)

Just because an idea is bad, doesn't mean it isn't repeated, eh? BTW,
you forgot ro add the ERP power limit on 60 meters. Rolling back the
output power to 50 watts when most HF transcievers will do 100 watts is
simply not going to work (if you want it to work that is)

Perhaps it is just as easy to detect someone running at 100 watts as it is at 3kilowatts?

But okay, perhaps you have the evidence of all the Technicians that have been injured by using 100 watts of RF power? What is the basis for 50 watts? Is it safety? Or is it arbitrary?

It fascinates me that you won't accept someone's plain and simple truth that they don't like CW--even if they don't have experience with it--because you reason that they need to have "knowledge and experience" with it. Well, I know people who are quite well-versed in CW who don't like it, people who haven't ever even tried it and don't like it, and people who have taken and passed a 5wpm test and don't like it. I also know people from those same three categories that do like CW operation.

It's pretty much as simple as folks who do or don't like most other things in life. Either ya like it or ya don't.

I disagree. Would you have skill testing for modes that few hams use,
like EME or TV, on an equal par with those that are widely used, like
voice and Morse?

> There is
> no longer any justification today for a unique test solely for Morse code.

I disagree. YMMV.

In the end, it's simply an opinion question.

> That opinion is consistent with recent FCC published statements.

Does that mean FCC is always right?

Was FCC right when they required 20 wpm for full privs and no waivers?

> As such,
> the unique Morse code test should be eliminated.

And perhaps it will be - someday.
>
> Not willing to accept that, you ignore the obvious double standard and
> instead try conjure up an imaginary double standard relating to the written
> tests.

Nope.

I simply point out that the same arguments used against the code test
can be used against most of the written tests.

But most people support the written tests as they are for opinion
reasons, nothing more.

> No such double standard exists. Those written tests, and their
> contents, serve a valid purpose today.

What valid purpose do the General and Extra written tests serve? Why
is *all* of their content necessary to operate HF beyond the small
sample of privileges granted to Novices and Tech Pluses?

> None here, including you, have said
> otherwise.

I've simply used the same arguments against them as are used against
the code test.

> The same cannot be said about the Morse code test.
>
Sure it can. I've done it.

> With all that in mind, I have no desire to engage in a fanciful discussion
> about the contents of the written tests, especially when that discussion
> cannot possibly lead to a valid point - no conflict or double standard
> exists concerning the written tests. As such, I've ignored the rest of your
> message and have instead addressed the specific point you've acknowledged
> trying to make.

You choose to ignore it because you don't have a definitive
counterargument. You cannot prove that most of the content of the
writtens, particularly the General and Extra writtens, are
necessary.

IOW, you know that if the same criteria of "is it necessary?" were
applied to most of the written questions, the answer would be the same

as you get for the code test.

So what? The point is that anyone could use a cheat sheet to send
and recieve morse. I never claimed it could be done at 5wpm.
In reality, there is NO minimum code speed required for
on-the-air use of the mode. The test requirement
is only that...a test requirement. If two non-code hams decide to
QSO on 2 meter simplex sometime, there is NO FCC rule
requiring any specific minimum sending speed be used.

> > > I've operated both RTTY and packet and other

And the converse is true for morse. There is no
longer any international treaty requirement and the FCC has
already stated they see no rational for code testing to be
retained. Ergo... no need for specific amateur testing
of morse for HF licensning...IMHO

Cheers,
Bill K2UNK

>
> There you go.

So how come the FCC didn't buy it in 98-143. How come
no-code techs are NOT forbidden from using morse even though
hey never passed a morse test.

By the way..."their exemplary conformance to the rulkes" is a
real stretch since most rule breakers seem to be coded hams
anyway.

Cheers,
Bill

So, let me get this straight, you are saying it's necessary for me to use CW, and comparing not doing it with failing to get a physical. I don't think that argument will hold water. The consequences of not using CW are what, exactly?

It would be a better plan to make the limit 100W, i.e. base it on the
equipment, not vicea versa.

Okay, so now morse code skill makes one "healthy?!?" :-)

Yes, morse code skill is absolutely necessary to get rid of invading space aliens. [see movie "Independence Day"]

Morse code skill is absolutely necessary to aid the survivors of the next Titanic sinking or get away from icebergs. [see movie "Titanic"]

Morse code skill is absolutely necessary for ALL emergency and disaster communications...and that is why all the public safety folks depend on morse code skill for all their communications involving life and death situations.

Right.

LHA

> Nope. Not at all. I am ticked because they think I should move for them.

Why shouldn't you move?

If it's OK for you to go 15 mph above the limit, why isn't it OK for them to go 20 mph above the limit? By refusing to move, you're enforcing your own personal judgement on what the speed limit should be.

Suppose you're sailing along on your 60 mph 4-lane-divided (2 lanes each way) road and you come across two (non police) cars side-by-side going exactly the speed limit.

What would you do? Would their behavior bother you?

> I am already going faster than the posted speed is my point. Why should
> someone expect me to move if I am already going faster than I should be?

Because you're preventing them from going as fast as *they* want, even though you're going as fast as *you* want.

> > >The argument is along the lines that this is the lane where, if

Why does anyone *need* to speed in a nonemergency situation? How much time does going 70-75 save vs. 60 on that same road?
>

What if they're going the speed limit?

Why is it OK for you to go 15 over but not OK for someone else to go
20 over?

> Yep. And it's mine...(grin)
>
HAW!

I do believe some of all this is regional, however.

And I've done a few tricks myself....

Way back in the late '80s, I had reason to go back and forth between Philly and Washington, DC about every other weekend. I noticed that the aggressiveness of drivers increased in direct proportion to proximity to the nation's capital.

The worst part of the run was the BWP (Baltimore Washington Parkway), a no-trucks 4 lane road with trees on both sides, and also between the northbound and southbound lanes. Lots of traffic on a Friday night, and as one approached The District the cars got more expensive and the drivers more aggressive.

Back then the limit was 55 and traffic tended to stay below about 59 because enforcement was pretty good, and there were lots of places for the troopers to hide in the trees, around curves, etc. The troopers would not go after anyone below about 62 because speedometers and radar are not 100% accurate. Above that they were ruthless, and above 65 the fines went up and up and up...

I got to know their whereabouts pretty good by observing where others got tickets. (I was *never* stopped, in part because my 1980 Rabbit Diesel looked like it couldn't even go the speed limit anyway). Radar detectors were illegal in MD back then, too, and they'd do things like set up a radar gun on an overpass and watch whose brake lights came on for no reason....

One night I'm sailing down the BWP in the *right* lane, and up behind me comes a new Saab (Saabs were the hot car back then among the yuppie-but-no-Beemer crowd). Dude flashes his brights at me - he wants *me* to get in the *left* lane so he can pass without having to change lanes!

So I ease up on the throttle and slow down to 53...52....51....

He gets ticked and crawls up but now I'm down to 50...49...

Flashes the brights, gets ticked, and I keep easing up....

Finally he gets ticked and goes into the left lane. Whereupon I start speeding up again...52...55...58...62...

He pulls alongside and now is really steamed because it is taking far more effort to get past me than he expected. So he drops down a gear and stomps it and goes off in a cloud of dust, over the next rise and around the curve.....

and I bring it back down to the limit...

and I wave as I go by him, because he's now stopped by a trooper for going WAY over the limit.....

I wouldn't play games like that today, though...

5 wpm is certainly too slow to prove much, but it only still exists at
that level as a residual requirement to meet the old s25.5, which has
since been changed so that no code test is required atall. If the FCC
truly thought that a CW test was necessary, the speed would be higher.

> The majority of newbies I've worked sent at approx. 8 to 10-wpm.

Well, I think that the real issue is that it's a different kind of test.

>> Also, if

Whilst that is true, the point I was making is actually that since I can't read RTTY or PSK by ear, and they are legal modes, it doesn't help all that much that I can read CW (albeit not terribly well, since I never use it).

I think that you have hit upon a very important point there, Kim. A good analogy might be not liking an item of food that you haven't tried, because it looks disgusting on your plate. If you eat some you might like it, or not, but there are probably all kinds of other things that contain the same nutrition. These guys are like a parent telling a child that they have to eat their brocolli. But they aren't my parents and I don't like brocolli, or CW. I take vitamins, and work phone.

It is impossible to tell if you like CW if you've never tried. Reading the
ingredients on a recipe will not tell you how it tastes.

Just because I think he had nothing to do with it doesn't mean I'm in the market to buy the Brooklyn Bridge. Quite the reverse, in fact. It's a bad mistake to automatically assume that two bad guys who happen to have nominally the same religion and live in roughly the same region are in league together. They had their own agendas. It's just too easy to lump all arabs together, but the middlle East is just more complicated than that.

No I did not say it is necessary for you to use code only necessary for people to learn it before deciding its usefulness for them. If one doesn't know it, one can't make an enlightened decision. Thus it is a necessary part of amateur radio whether or not it is used by any particular individual.

The consequences of not using code are simple and that is having to cease HF communications earlier than those who do use code when propagation falls off. Regardless of the relative magnitude of this consequence it is nevertheless a consequence.

BINGO! All plans have to incorporate some history and what is going on at the moment. If a new ARS was to be made from nothing starting right now, there would be no problem whatsoever dictating that the maximum power for the so called class B license is to be 50 watts, or 48.7654 watts for that matter. But for years now, the standard max power for most HF rigs has been 100 watts.

>> fanciful, long-winded, exchange that cannot add anything of real substance
>> to the discussion about Morse code testing (see below).

Your methods of misdirection are doing quite well. You can make up all kinds of fanciful, long-winded exchanges about OTHER alleged improprieties...and that directs folks attention away from the "necessity" of a code test.

That was your whole purpose anyway (visible to all who can read).

>> > > Since you keep asking this, do you
>> > > have a point to make, Jim?
>> >
>> > Yes.

This is NOT about "skill testing for modes that few hams use."

This is about the CODE TEST.

>> There is
>> no longer any justification today for a unique test solely for Morse code.
>
>I disagree. YMMV.
>
>In the end, it's simply an opinion question.

No, it's about CONTROL. It's about keeping the SAME standards
(forever) that YOU had to meet...even when those standards won't
apply to you or your privileges.

Where is all the morse code use in all the public safety agencies
and distress-emergency communications means elsewhere in the
larger world of radio? GONE. Only some radio amateurs use it.

You will argue that other radio isn't the "same" as amateur radio.
The only bolster for that argument is your previous rationalizations
which are a disguise for requiring all in the future to do just as you
did in the past. That's the "control" part. That's keeping the OLD
standards because, if the old standards are reduced or gone, you
don't have any claim of "superiority" over others in amateur radio.

>> That opinion is consistent with recent FCC published statements.
>
>Does that mean FCC is always right?
>
>Was FCC right when they required 20 wpm for full privs and no waivers?

No. It only means that, LONG AGO, the FCC gave into ARRL
demands, lobbying, and pressure. Way back, before Internet, the
ARRL was a mighty influence in DC. No longer.

>> As such,
>> the unique Morse code test should be eliminated.
>
>And perhaps it will be - someday.

Amateur radio is the last hurrah for morse code.

The Archaic Radiotelegraphy Society (ARS) will be no more than
a memory...and countless articles of "the old days" in amateur
magazines when the editors of same can't publish technical
articles about "advancing the state of the amateur radio art."

>> Not willing to accept that, you ignore the obvious double standard and
>> instead try conjure up an imaginary double standard relating to the written
>> tests.
>
>Nope.
>
>I simply point out that the same arguments used against the code test
>can be used against most of the written tests.

Your "pointing" only points to subjects NOT under discussion and
you refuse to "point" to the subject.

>But most people support the written tests as they are for opinion
>reasons, nothing more.

Then make your "point" to the VEC QPC. They are the ones who
make up the written questions. They also generate the code test
source.

The "14 petitions" are almost exclusively about the CODE TEST.

>> No such double standard exists. Those written tests, and their
>> contents, serve a valid purpose today.
>
>What valid purpose do the General and Extra written tests serve? Why
>is *all* of their content necessary to operate HF beyond the small
>sample of privileges granted to Novices and Tech Pluses?

Your "pointing vector" is not in the same direction as it should be.

Try to stay focussed on the CODE TEST.

>> None here, including you, have said
>> otherwise.
>
>I've simply used the same arguments against them as are used against
>the code test.

You have misdirected mightily.

>> The same cannot be said about the Morse code test.
>>
>Sure it can. I've done it.

You've done everything. :-)

>> With all that in mind, I have no desire to engage in a fanciful discussion
>> about the contents of the written tests, especially when that discussion
>> cannot possibly lead to a valid point - no conflict or double standard
>> exists concerning the written tests. As such, I've ignored the rest of your

>> trying to make.
>
>You choose to ignore it because you don't have a definitive
>counterargument. You cannot prove that most of the content of the

>writtens, particularly the General and Extra writtens, are
>*necessary*.

Tsk, tsk, you are still misdirecting.

The subject is the CODE TEST and the 14 petitions.

You want to argue written questions because you have NO
counter argument to keep the CODE TEST...in this millennium.

>IOW, you know that if the same criteria of "is it necessary?" were
>applied to most of the written questions, the answer would be the same
>as you get for the code test.

Your misdirection is getting absurd. This isn't about the written
questions. It is about the CODE TEST.

Hello? Earth to Jimmie, come in, spaceman spoof...find any aliens
ready to invade earth that can be destroyed through using morse
code for communications? :-)

If you are so all-fired concerned about the writtens, why don't you
contact the VEC QPC? Or file a petition with the FCC on the
amateur writtens. FCC will accept lots of things. They did with the
14 PETITIONS now closed for comment.

Dwight, amateur radio is a SERVICE...to the nation in times of need
and "everyone knows" that ONLY morse code can get through when
nothing else can, ergo it is "necessary" to have it. That's why all the
other public safety and distress-emergency communications users and
providers still use morse code.

> This brings us back to the code testing debate. If Morse code is not

>end.

The TEST and the USE cannot be separated, Dwight. It is "necessary"
to keep the test forever and ever so that there will be this "pool of
trained operators (in CW)" to help earth survive on the next invasion
of spacefaring aliens.

:-)

I don't know what's so fascinating about it, Kim. It stands to reason that
to make an "educated" decision regarding anything, one should be...well,
somewhat educated on the subject. That includes some practical experience.
One certainly need not be an expert, and appropriately, the 5-wpm Element 1

test is not an expert level test.

> Well, I
> know people who are quite well-versed in CW who don't like it,

Educated decision.

> people who
> haven't ever even tried it and don't like it,

That's why we have the no-code Techician license.

> and people who have taken and
> passed a 5wpm test and don't like it.

Again, an educated decision. What's the point?

> I also know people from those same
> three categories that do like CW operation.

I seem to have found them...on the bottom of 40. Interestingly enough, I've even heard interested folks who've yet to pass Element 1 practice their code (Legally) on CB ch. 14 using 100mW Part 15 devices.

> It's pretty much as simple as folks who do or don't like most other things
> in life. Either ya like it or ya don't.

...And that's certainly fine by me, Kim. However, many of these anti-code folks are about to diminish the value (As a whole.) of a hobby I dearly love...despite having a very generous chunk of no-code RF real estate.

I've had the advantage of seeing this whole code vs. no-code debacle unfold before me through the eyes of a relatively unbiased newbie. If you remove the passion and whining from both sides of the equation, it becomes very clear what the issue is really about...because it damn sure ain't that 5-wpm code exam.

Wow, a Morseodist Believer! Morse code is NECESSARY!!!!

Can anyone spell "Archaic Radiotelegraphy Society?" :-)

>The consequences of not using code are simple and that is having to cease HF
>communications earlier than those who do use code when propagation falls
>off. Regardless of the relative magnitude of this consequence it is
>nevertheless a consequence.

Really? You should have channeled the U.S. military and, in particular,
the Army Command and Administrative Network (ACAN) way back in
1943 or so when it was formed.

I had three years of direct experience on HF at ACAN's station ADA
back a half century ago. It did ALL its long-distance communications

(over 200 thousand messages a month) on HF, trans-Pacific. Only ONE time (late 1955) was there ever a total radio blackout for three hours...which disrupted everyone on HF radio in middle Pacific due to a solar storm. Otherwise ADA was on-the-air 24 hours a day, 7 days a week on HF. Not one circuit was "CW" or used morse code.

Maybe today's sunspots are ever so much "stronger" than they used to was? :-)

There's lots of ham bands on HF, Dee. You and anyone else are all free to use whatever band you want if your license privileges allow. "QSY" is the trick...or are you rock-bound on only one band?

Excellent analogy, Kim and Alun!

[...shades of "Mommie Dearest" I used some months ago... :-)]

Morse code is 159 years old. It was first used in COMMERCIAL
messaging back in 1844. It has quite a lot of history of use to base
an effectiveness of communications. That base and history is why
morse code is only used in amateur radio today. All the commercial
and military users have dropped morse code use in the rest of the
radio world. Morse just isn't as effective as its believers think.

Dee insists that "enlightened" folks "have to experience something"
before stating an opinion on it.

Okay, so all the obstetricians have to be female and parents before
being allowed to supervise birthing? All gynecologists have to be
female in order to treat women patients? Same logic.

Catholic priests will have to have been married at one time in order to
advise engaged couples about to marry. Military people will have to
go out and engage in combat, killing someone FIRST before they can
state an "enlightened" opinion on war. Absolutely NO ONE can voice
any "enlightened" opinion on politics, foreign policy, economics, or
homosexuality unless they have DONE any of those things... :-)

Absolutely nothing NEW can be done because no one has any
experience in doing it. The ONLY way to stay "enlightened" is to
remain in status quo forever. :-)

Was Thomas Edison "enlightened?" :-)

Some of these pro-coders are a little too enlighted in the head.

Correct-a-mundo..I did!

I was a big MJ fan until he started the plastic/whitewash crap.
A "nose job" or tummy tuck notwithstanding, you expect that from
Hollywierd...But I absolutely can't stand to look at him anymore.
He's nauseating.

Also, he's where others have "evolved" in thier art, he's not put
out one decent thing in 10 years. Too bad. He cudda been a
contender.

As for being a "justice department" target, the charges came from
private individuals...>>IF<< he's a target of anything (assuming for a
second he really is innocent) he's the target of golddiggers and
charaltans. Otherwise I think he's probably getting what he deserves.

That's a 'novel' idea! In that case the power limit should be 2.5KW,
because that's how much output my homebrew linear will produce if I supply
enough drive. If I build an even bigger linear, will FCC raise my power
limit? (Or will they expect me to obey the regulations?)

And we should make the speed limits in my town 140MPH, because that's how
fast my supercharged Ssei will run. (Try that one in front of the judge!)

Sunuvagun!

Slight difference, Alun. Nobody's forcing anybody to learn code. There exists a no-code Technician license for those who do not wish to have to pass the 5-wpm code exam.

>
Nope.

The person you have to thank or blame is Ralph Nader. By splitting the support for Gore, he managed to put Dubya in the Oval Office.

Talk about irony - the author of "Unsafe At Any Speed" managed to put a Texas oil man in the White House.

Exit polls across the nation during the 2000 election showed that the following response when asked what they would have done if Nader had not run, or had quit:

About 1/4 said they'd vote for Bush
About 1/4 said they'd stay home, vote for another 3rd part candidate, etc.
About 1/2 said they'd vote for Gore.

Ralph got about 3 million votes across the country, so if 750,000 had gone for Bush and 1.5 million for Gore, it would have been a very different election. State-by-state analysis shows that several close states - particularly Florida - would have been solid for Gore.

The situation was similar to what Perot did, only this time the Republicans were the beneficiaries.

Thanks, Ralph

"Love?"

If you are looking for love, such is hard to find in debate about
law matters.

If you love, cherish, honor, and obey morse code, then you should
be content with that inner love. You have found your avocational
soul-mate.

>I've had the advantage of seeing this whole code vs. no-code debacle unfold
>before me through the eyes of a relatively unbiased newbie. If you remove
>the passion and whining from both sides of the equation, it becomes very
>clear what the issue is really about...because it damn sure ain't that 5-wpm
>code exam.

Sorry, Bert, but the 14 PETITIONS is almost entirely concerned with
morse code and morse code testing.

As to "real estate" in regards to the EM spectrum, I can safely say
that I've probably seen a lot more of it than you have...and operated
there. Hardly anyone else in the radio world is using morse code
modes that are 159 years old. From VLF on up to Ku-band, I've never
ever needed or had to use any morse code for radio transmission for

over a half century.

I might agree in part with what you say. Those who dearly love the old, the comfortable no-change-whatsoever status quo, will HATE removal of the code test. Such (to them) would be an abomination of the soul, heresy, defamation of the almighty, etc. Righteousness isn't "love," it is just rationalized control over others.

The morse code test hasn't left amateur radio license exams in 91 years. Devout morseodists demand a continuing "love" for a mode which started fading back before they were born. Such equate amateur radio and morse code with an inflexible bond...and such a bond is not physical but a mental glue that needs a solvent for softening for all those of the future.

Feel free to continue pejoratives against the no-coders, Egbert. Your "love" keeps you strong. Amateur radio as-it-is is YOURS and belongs to YOU, no one else...unless they believe as you do.

Morse: Love it or leave it.

In Japan, where there is a 10W power limit on one class of HF operators, there is a plethora of 10W rigs available, most exactly the same as their 100W cousins except with a 10W final stage. As an example, the Icom 760 which is identical to the Icom 761 except it runs 10W. If the regulations created a market for 50W-max HF radios, they'd be on the shelves of HRO in time for Christmas giving.

Are you seriously suggesting this is an appropriate reply to what Alun
wrote?

1. Who cares what your homebrew amp can run? You or I can make a larger
amp than that. You are arguing past people like Alun and myself. The
argument isn't about how much smoke any one person can put on the air.
The argument is about making a power limit that is accomodating of the
way that equipment has been made for quite a while and is still made
today. In fact if you were to call for a power limit of 100 watts, I
would say "that's fine."

2. I've been waiting for someone to bring up the automobile power
thing. That argument is completely irrelevant to this discussion. If
automobiles were made that could only go the speed limit and no more,
then they would have very little power. If ham transcievers were
comparable in any way to cars, we would have to start our transmissiona
at a high rate of power, and reduce power as we get up to whatever it is
we would have to get up to. The two just aren't related.

How so? I know the UCMJ fairly well, and expressing his opinion
(as inappropriate as it may ahve seemed) is not a violation of the
UCMJ in this instance.

Now...had it been an OFFICER being interviewed on TV, then it
could ahve been, especially had it been that Arab network in Qatar.

And that 50 watts affects calss A different than Class B?

I seriously doubt that a person that cannot handle 100 watts shild have any license. Maybe class A shouldn't be alloed to have antennas over 10 feet off the ground either. Nasy falls.

There's been no definitive proof Saddam had anything to do 9/11. Nor that he had WMDs prior to Gulf War 2. That's been admitted publicly by the current administration.

"Mike Coslo" <mcoslo@adelphia.net> wrote

> And that 50 watts affects calss A different than Class B?

Of course not. (This is another of those 'novel' questions.)

But my intention is that the Class B (learners permit with training wheels) test be ultra simple, to allow as many applicants as possible. For that reason, requiring qualification in esoterica like "Biological Effects and Exposure Criteria for Radiofrequency Electromagnetic Fields" is inappropriate. Thus the 50W power level recommended by the NCRP and ANSI/IEEE ensures a modicum of safety for these beginners.

In the process of preparing for Class A (without training wheels) license, the candidate would need to explore the RF-exposure safety issues which would be on the qualification test. Then we could expect that they'd have some appreciation of the hazards and how to ensure that their station is engineered in compliance with the MPE criteria mandated by 97.13(c).

Hans dropped in a nice bibliographic note but did NOT say HOW
he arrived at his magical 50 W limit. :-)

Way too many variables in the amateur radio "station" arrangement
to say with some kind of certainty that 50 W is THE limit for any
class. FCC already showed that with a survey of some typical
California ham stations along with measurements of fields courtesy
of a couple of other government agencies and the hams who let them
all prowl around their property.

>And that 50 watts affects calss A different than Class B?
>
>I seriously doubt that a person that cannot handle 100 watts shild have

100 Watts in a 50 Ohm system has an RMS RF Voltage of 70.7.
That's on the verge of burning human skin tissue.

50 Watts in a 50 Ohm system has 50 V RMS RF...still on the verge
of burning human skin tissue, although not as badly.

100 W of RF is little, piddly stuff to what I'm used to...like 15 KW up-
close-and-personal on HF, including walking around in antenna
fields of many and varied HF emitters...and 40 KW PEP HF stuff in
antenna fields in 1955. Most of us being personal with such powers
weren't suffering ill effects and almost all of us weren't licensed in
any "classes." We got the messages through.

For some really in-depth looks at radio frequency radiation, go to the Brooks AFB website and the documents at the USAF School of Aerospace Medicine. The following is the cover page for one of the shorter documents released in 1996:

http://www.brooks.af.mil/afrl/HED/hedr/reports/human-exposure/cover.gif.html

That document title number is AL/OE-TR-1996-0035. It was prepared in 1994. Be prepared to do a little math to find the permissible RF field strengths...not much, just a little.

There's also FCC Office of Engineering and Technology Bulletins 56 and 65 available on the FCC RF Safety webpage. Only a few ANSI standards are free for download (if available), the same with the IEEE site.

Maybe Hans will reveal what kind of aluminum suit he wears when he fires up his "2.5 KW with increased drive" HF amplifier. :-)

Of COURSE you are not going to reply Kane, For the simple
reason you have no source or proof for what you are saying,
other than your own "spin." The NSA said no such thing.
A holiday ensign (An AMERICAN flag FOUR
times the size of a normal flag) was hoisted on the USS
LIBERTY after JEW torpedo boats & aircraft made threatening
moves toward the USS LIBERTY. Moreover, the USS LIBERTY
was continually calling on international radio frequencies to advise
the Jew attackers they were coming near an AMERICAN
vessel. Oh, Jews do speak English don't they Kane? Even
then, the radio hailing was being done in Hebrew & French.
Incidentally, the NSA does NOT ever communicate with foreign
governments under the conditions you describe.
BBZZZZZZZZT! You are full of crapola!

> The same USS LIBERTY that, when the Mirages came over to assess the
> damage caused by the first strike, THEN showed the US flag and the
> Mirages pulled back.

Wrong Again! See above. The USS LIBERTY was flying
highly visible AMERICAN identification from the very
git go! And the JEW jets did not pull back after seeing the
American identification. They came in to kill more innocent
American sailors with JEW rockets and bullets, given to
Israel by the people of the United States.

>

A U.S. coverup???? LOL LOL LOL LOL LOL
Pullllleeeeeeeze now. The Jews stonewalled every attempt to
investigate the incident AND still are !!!!!!!!!!

> >which was attacked by the JEWS.
>
> Ah. now we are getting down to your agenda......
>

NO! If there is any "agenda," that is your perception
entirely. The truth knows no "agenda." However,
you DO have an agenda.

> Don't bother to reply. It's not going to be read.

Nobody in this group gives a flying f..k what you read or
don't read.

JEWS deliberately killed 37 innocent American sailors on the
USS LIBERTY, wounded 153 and to this day Israel continues
to lie, stonewall, and coverup the truth.

And you are the judge of what is possible and what is impossible?

> A lot of things once considered "impossible" have become reality.

Your Thanksgiving wish is impossible. Did wishing it make you feel
better?

> Live with it.

Are you making a wager?

The wager being: "All US service people will be home with their
families on Thanksgiving 2004."

Just send the Red Lobster gift certificate to my callbook address.

There you go, Jim. Your prayers and moral support is all that you can
give to those deployed. Tearing down their CIC hurts them, not helps
them, and won't bring them home any sooner for Thanksgiving or
anything else. There will always be deployed service people over
Thanksgiving and Christmas holidays. That's just the way it works
when you raise your right hand and swear in. And all the people who
raise their right hands know it.

Jim, it would appear, at least on the surface, that you would also
welcome the comments of Len Anderson.

I guess that saying the right thing is important, even if you don't
mean it, or even if it's impossible. It makes everyone feel good.

> ANSI/IEEE ensures a modicum of safety for these beginners.

I would counter that it is a good idea for the initiate to know right
off the blocks that RF has some potential problems associated with it.

And while everyone talks about RF exposure, there are other problems
associated with RF that a person should know before they are allowed to
legally operate a rig. I had a problem trying to tune a longwire once,
and my trusty MFJ tuner nailed me good - bad knob design - it shouldn't
have the metal rim on the knob, which allows for some capacitive
coupling, so it seems. RF burns hurt! Power was probably around 50 watts.

I think the responsible thing to do, if safety is a concern, would be
to get those safety guidelines out of the way BEFORE going to advanced
licenses.

I also hope that your regulations would prohibit the Class B hams from
making or using a magloop antenna. I just did some calcs on a small
magloop for 40 meters, and at 50 Watts there is almost 5 kV across the
tuning cap. Ouch!

> In the process of preparing for Class A (without training wheels) license,

I think the candidate needs to know the safety issues long before this.
If the potential ham is smart enough to learn them for class A, they
should be smart enough to learn them for class B. If safety is first,
they shouldn't learn it second.

I understand, but do not accept. Tat line of thinking of course is why the human race is almost certainly doomed. Over thousands of years, there is plenty of time for each side to make a little bank account of transgressions that they can call upon to provoke righteous outrage. And it will not go away until there is only one person left in whatever the conflict was.

One of the most civilized things that the USofA does is that we have made a habit of burying the hatchet with our onetime enemies. Something I doubt that people who are mad because of what someone did to them a thousand years ago can understand.

You can find a good accounting of the USS Liberty in Chapter 7,
"Blood," in James Bamford's "Body of Secrets," Doubleday, 2001.

As to "coming clean," Bamford blew you out of the water on the
details over two years ago.

To me, the entire idea is a solution seeking a problem. Since I don't think the current license holders are lacking, I don't see any real benefit (and I don't think the FCC will either). Regardless, his proposal would require a complete re-write of all the rules relating to license class, when a single sentence added to the existing rules would accomplish virtually the same thing - "All license holders, except Extra, must obtain the next higher license class within five years of obtaining their current license." Another sentence might describe what will happen if that doesn't occur.

> To get all the _phone_ frequencies

Ah, good...for increased privileges. Obviously, noted by your class of license, you did NOT find this to be an insurmountable hurdle. After all, nobody forced you to either upgrade your ticket or aim for the General or Extra right from the starting gate. You *wanted* more *privileges* and these were a sufficient *incentive* for you to decide to make the effort to *earn* them. That's not being forced to do anything, Alun. Them's good old-fashioned values...and the basis for a principle that I'd be glad to see my kids apply to ALL of their endeavors in life.

This whole issue is not really over the Morse code test. It's about ANY requirement that causes an applicant to really have to expend some mental elbow grease and/or impede his/her path toward instant gratification. Like I said before, pull those published Q&A pools and make 'em learn the subject matter and actually apply the principles and theory to pass the writtens...and witness the whine factor grow. Preparing to pass the 5-wpm Exam cannot even be called cerebral, it's rote memorization. The faster speeds become purely reflex oriented. Nobody's thinkin' when they copy hi-speed Morse.

So all this blather about "jumping through hoops" and "barriers" is a bunch of hot air. Folks have just figured out a way to gain a *privilege* in a <perceived> easier fashion, collectively whine. It stands a great chance too. After all, the Gov't. agency they must cajole shares their goal, less work. So with great glee, their proponents espouse "the FCC doesn't agree that Morse is necessary." The "regulatory" angle is just that, an angle. If you ignore the angle, you realise that it was never about Element 1 in the first place.

Why must our beloved hobby/service be reduced to the lowest common denominator?

73 de Bert

Why is that a misnomer, Hans? Is that (you don't like "Technician" as the name for this license) the real reason behind your attempt to change the names of the various licenses? Regardless, I've read about Technicians in your proposal. That still doesn't change any of my previous questions or comments about how potential newcomers will be affected by the changes suggested in that proposal.

By the way, since we're discussing why here, perhaps you can explain why your proposal is needed at all. Exactly what are you trying to accomplish with the proposal and what evidence do you have that would suggest that need?

Very true, Alun...very true.

> No HF privileges with that licence, as we all know.

As with most things in life, increased *privileges* requires increased effort. The ARS is but a microsm or society as a whole. Despite the efforts of some to reduce it to "just a hobby" status, the values and principles we learn in our "avocations" will likely carry over into the other aspects of our lives. Many here were first licensed as children or young adults, that's no accident.

The kids of today are referred to as the Nintendo generation, kinda hard to compete with. However, in our quest to gain quantity, we appear to be courting a slightly older prospective ham...products of the newer "I want it now" society. So what can we do, villify the "speed bump" of our licensing structure in an effort to remove any "barriers." I kinda liken it to kids that are graduating HS with a 5th, 6th, or 7th grade reading level. Gee, how'd they get through? Check out the recent regents debacle. Not enough kids pass, it must be to hard...so we'll throw 'em a curve. See the cycle there. Had someone had the courage to NOT throw some of these kids their earlier curves in the first place, their Regents scores would be higher.

What does this have to do with amateur radio? Human nature. What we learn to do as we practice our avocation early in life, we tend to apply to other

aspects later in life. Still believe this is about a 5-wpm Morse code test?

Why must we reduce our beloved hobby/service to the lowest commen denominator?

That fact, as you call it, ignores other very real facts. Few people today (especially boys and men) have not learned code, or at least played around with it, at some point in their lives. When we were kids, many of us sent messages to friends using flashlights or walkie-talkies with code printed on the side. Many other games and toys over the years have featured messages, secret or otherwise, sent by Morse code. Others learned code in groups like the Boy Scouts. Still others learned it in the military. In reality, most adults today are familiar enough with code to know whether they have any real interest in it. Clearly, those with no interest are not exactly highly motivated to study up for a license exam. But the fact that some have no interest in code, and would freely choose not to learn it, really seems to bother some of the "most vociferous and abusive" pro-code folks.

I didn't offer "it's obvious" as an answer. Instead, I wrote...

"Considering the power levels, the number
of frequencies and bands, the overall safety
considerations, the desirability of proper
operation when using the various operating
modes, and the importance of the rules
associated with all that, the necessity of the
written exams is clearly obvious."

> I disagree. Would you have skill testing for modes
> that few hams use, like EME or TV, on an equal
> par with those that are widely used, like voice and
> Morse?

Those modes are already on equal par with voice (written with no skills
test). What you haven't explained is why that shouldn't be the case with
Morse.

> IOW, you know that if the same criteria of "is it
> necessary?" were applied to most of the written
> questions, the answer would be the same as you

Nonsense. But you're darn fool, or think I'm one, if you expect me to get
into a point-by-point discussion with you about the several hundred
questions in the question pool to prove otherwise. Enough said.

LOL. Those darn aliens have had their eyes on Earth for some time now. Luckily, CW keeps us well prepared for any stunt they might try. I've even heard of a secret Air Force project to study the effects of CW on captured aliens. ;-)

If you admit that you view the code test as a "speed bump", then you are admitting it's not relevant, but just there to slow down the traffic. You view that as desirable, and I don't, which is one of the differences between us.

It is not Amateur Radio's job or mandate to correct society's ills, Bert. Indeed, the current members of this avocation are not different enough from society overall to even have the moral high ground to attempt to do so. We're not gods or priests - we're simply radio operators. By the way, the word "too," as in "too hard," has more than one "o."

> Why must we reduce our beloved hobby/service
> to the lowest commen denominator?

There is nothing in code testing that insures the highest common denominator, or anything more than a lowest common denominator. Incidentally, one would reasonably expect no spelling mistakes in a message written by a person bold enough to point out the limited educational skills of others. The word "common" is spelled with an "o," not an "e."

No, there's more.

>Tearing down their CIC hurts them, not helps
>them, and won't bring them home any sooner for Thanksgiving or
>anything else.

So no one should criticize the president whenever there are troops deployed
anywhere? That's what you seem to be saying.

Who sent American military personnel to the Balkans? Should no one have
criticized him until they all came home?

>There will always be deployed service people over
>Thanksgiving and Christmas holidays.

Why must it be that way?

I was told growing up that there would *always* be a need for more and more
nuclear weapons and delivery systems, because we had to counter the Soviet
threat, and they'd *never* agree to dismantling their weapons or even seriously
reducing their numbers. SAC bombers in the air, boomers on patrol under the
sea, ICBMs in silos all over the country - and there was serious talk of
development of space-based systems, hypersonic cruise missiles, and many other
systems.

How much threat is the the old Soviet Union now? The biggest threat they pose is if some of their weapons wind up in a terrorist's hands.

Recall that Gorbachev proposed massive dismantling of nukes 20 years ago but Reagan would not agree because Gorby tied a ban on serious SDI development to it.

>That's just the way it works
>when you raise your right hand and swear in. And all the people who
>raise their right hands know it.
>
A lot of things thought to be impossible have become reality, though.

>welcome the comments of Len Anderson.

I used to, Brian.

But for years, Mr. Anderson has used his "comments" as a way to voice unprovoked insults and denigration of those who oppose his views. His "comments" are rarely if ever without such ad hominem attacks. He is particularly nasty to those who prove him to be mistaken on any point of radio theory or history, as I have done many times.

Thus, his credibility in this newsgroup has been eroded over the years, to the point where it does not exist at all any more.

Your credibility is also eroded, for similar reasons.

The authors of the "21st Century" paper are trying to bolster the credibility of their ideas by pointing to their own personalities rather than the merits of their arguments.

>I guess that saying the right thing is important, even if you don't
>mean it, or even if it's impossible. It makes everyone feel good.

Try considering what I wrote in the context of a reply to the authors of the 21st Century paper.

>I think you're missing the point. I took _code_ tests to get _phone_
>subbands. There's no logic in that. Never was, even from the beginning.

Sure there is. Here it is, though you may argue that it doesn't hold much water
today:

'Phone signals take up far more spectrum than code signals. Back in the days
when full carrier DSB AM was king, the ratio was even worse than it is with
SSB. Ten to twenty code signals in the space of one AM 'phone signal is about
right. Not to mention the whistles from heterodyning carriers.

If you're going to argue about non-related privs, then why should anyone have
to learn about VHF/UHF to use HF, or vice versa? Why require knowledge of
'phone and image to operate CW? Why require theory to operate manufactured
equipment?

Why require anyone to learn anything they don't think they'll use? Or anyhting
they don't like?

But there sure are lots of terrorist-like activities in Iraq, in
defense of Saddam and in attempts to repel the Americans.

If there wasn't anything prior to 9/11, there sure is now.

OK, fine.

Then possibly something really good was going to happen to you, but the spell prevented it.

Point is, proving cause and effect or lack thereof is more difficult than "nothing happened".
>
>> Who determines what is a "legitimate" religion

It's a very important question.

>Especially
>when the answer is bloody obvious - like with most other things, people do.
>People either decide it's a legitimate religion or not.

Which people?

There have been times and places where religions like Christianity and Judaism were not "legitimate religions" because "people" said they weren't.

Are the spiritual beliefs of Native Americans "not legitimate"?

>A small, fringe,
>group of supposed believers don't make a religion legitimate (Hale-Bop's

>simply 'borrowed' things like black robes, symbols, supposed spells, and so
>on, from relatively modern day fiction.

So? Can anyone *prove* that the old books upon whioch many "legitimate"
religions are based are not fictional - or at least partly fictional? Yet
millions believe they are literally true.

There are plenty of people who will argue with you that the earth, sun , solar
system and everything else are no more than a bit over 6000 years old, because
they interpret their Book that way. Is their religion not legitimate?
>

>
And what if they can't demonstrate them? Prayers aren't always answered the way
we want, yet the faith of the people praying is not diminished because God's
responses aren't 100% in line with human desires. Does this mean religions that
involve prayer-for-divine-intervention aren't legitimate?
>
>> Fine - but then why discriminate between "legitimate"

Sure they have. You divide religions into two groups according to your
judgement.

Would you want your religion, or lack thereof, labeled "not legitimate"?

My thoughts exactly! I tend to prefer a system something like what we have now, preseumably sans the Morse code test, with something added to at least the General test, and likely the Extra test also.

I want added test material for the advanced licenses to fill the vacuum left by the departure of Morse Code testing. I don't want the additions as a way of keeping people out - indeed if there are some more questions, it is just a matter of studying a little more. I want it to show that we are not just getting rid of things, and thereby simply making things easier to get a ticket.

Seems like a much easier to implement system to me.

These are the number of unexpired FCC ARS
licenses held by individuals on the dates listed:

As of May 14, 2000:

Novice - 49,329
Tech - 205,394
Tech Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750
Total - 674,792

As of November 30, 2003:

Novice - 32,830 (decrease of 16,499)
Technician - 258,967 (increase of 53,573)
Technician Plus - 63,689 (decrease of 65,171)
General - 141,387 (increase of 28,710)
Advanced - 82,209 (decrease of 17,573)
Extra - 104,750 (increase of 26,000)
Total - 683,832 (increase of 9,040)

> These people are in a position of responsibility for mentoring
> the next generation of Amateurs..?!?!

I don't *think* so!

You may wish to read my rebuttal to that paper, posted here in 3
parts. Perhaps I should send it to CQ as well....

> While I am a big proponent of CLOSING the question pools and
> thereby requiring potential licensees to actually LEARN something,
> including regulations, even our present system of open pools and rote
> memorization will ingrain SOME understanding of the most of the basic
> rules of the service!

Exactly. And of all subjects that should be in the tests, the
rules/regs are #1 priority.
>
> Of course I can't help but believe this is another W5YI

>
He's not in that business any more.

> Read the whole article. It's a really poorly thought out concept
> and one that's been beaten over and over again.

Actually the basic concept boils down to revamping the old Novice for
the 21st century. Fine - let's do just that, call it the Novice, and
use it as the entry level instead of the Tech.

If it's the same article, it has a few good ideas and some very bad
ones.

"Dwight Stewart" <stewartx@NOearthlinkSPAM.net> wrote

> Why is that a misnomer, Hans?

Because it is misleading. "Technician" implies an emphasis on technical training, skills, and qualifications. While the original Technician license stressed those areas and was specifically designed to encourage amateur experimentation in VHF/UHF portions of the spectrum, that charter has long shifted to the point that Technician is the entry level license to our service, and the qualfication process gives little more than a "wink and a nod" to technical training and experimentation.

The name should be "Communicator".

Dan,

Problem is you will never convince the extreme leftists who
presently control the Democratic party of that fact. Their
hatred of Bush blinds them to any reality. The good news is
our men & women in the U.S. military now know
they have a real CIC. Don't look for the leftists to figure
that one out though, since they are too busy "loathing" the
military. OH, but they DO "support the troops." U.S.
Senator Zell Miller has it right, "The Democratic Party,
A National Party No More."

The FCC is not chartered to be an educational institution.

The amateur radio license test is NOT a certificate of achievement,
although some think it is so.

There is NO "requirement" that all prospective radio amateurs
"prove themselves" to the "amateur community" in order to
satisfy YOUR demands of hard work, dedication, and application
of "what is 'good' for amateur radio."

It's amazing the amount of self-righteousness that exists among the already licensed in here. All newcomers MUST do as they did in order for "acceptance" to the group.

If you wish to BAN "wide bandwidth signals" in the U.S. amateur
bands, then submit a PETITION for such banishment.

Take everything back to 1950 or thereabouts, maybe even 1930.
BAN all those newfangled modes and modulations that don't meet
the criteria of simple, narrowband on-off keying. I keep suggesting
you also include in your petition a name change of the hobby to

Archaic Radiotelegraphy Service

If you feel "insulted" by such extremism, then change 'archaic' to
Amateur. You have the liberty to do that.

"Extremism in the defense of liberty is no vice..."

Guess who said that? :-)

Dwight, you cannot argue with Believers.

Their self-righteousness knows no bounds.

They are correct by their own definitions.

They KNOW what is best for amateur radio...and that is a maintenance
of morse code proficiency forever and ever.

A morse code test for amateur radio licensing has "always" been in
the regulations (91 years) and it must always be there.

>> Why must we reduce our beloved hobby/service

Dwight, morse code proficiency overrules all other things. It doesn't matter in other skills. Only one thing counts - morse code skill.

Alun, a morseodist will NEVER admit they are wrong or are defeated.

A morse code test has "always" been in regulations (always = 91 years)
so, therefore, by morseodist logic, it must ALWAYS be there.

Any demands, however slight, to reduce or eliminate the code test
are a blatant insult to individual Believers-in-Morse, heresy, an
abomination unto the god of ham, and other assorted pejoratives.

MISDIRECTION in replies in here is now an SOP. Sigh.

>> Why must our beloved hobby/service be reduced to the lowest common
>> denominator?

A "lowest common denominator" is unity. One.

United States amateur radio was created for only One. All must do as
that One did. Forever and ever.

Belief is love. Ergo, anything against the One is an insult.

Lots of insults in here, especially by the Loving Believers who will not,
ever, accept anything against their Beliefs of the One.

LHA.

>the Boy Scouts. Still others learned it in the military.

I was in the U.S. military for 8 years. Never learned any morse code, never had to.

I used real walkie-talkies and handie-talkies (AN/PRC-8 and AN/PRC-6, respectively). Never needed any morse code proficiency to use those.

I even transmitted on HF with many KiloWatts of RF power, never had to use any morse code proficiency thing for that.

The only "code" I learned as a kid was deciphering "secret messages" sent over a radio show (Captain Midnight?) which amounted to "drink Ovaltine." :-)

>In reality, most
>adults today are familiar enough with code to know whether they have any

Jim, you might be suprised to learn that the authors of the 21st Paper felt it necessary to to bolster their credibility because of the ad hominem attacks on them - as code haters, CB Plussers, and desirous of destroying the ARS. I'm sure that you know what I mean.

So they present not only ideas with merit, but also personal and professional credibility.

If their credibility is so bothersome to you, just wish it away.

Why select May 14th 2000? Restructuring took effect a month earlier. I upgraded from tech + to extra on April 15, 2000 and the paperwork reached the FCC just a few days later the next week. Thus I would show up as an extra in the May 14th 2000. If your objective is to show the effects of restructuring, you need to list the numbers for April14, 2000.

It's not about the code Alun, it's about the effort.

> > Human nature. What we
> > learn to do as we practice our avocation early in life, we tend to
> > apply to other aspects later in life. Still believe this is about a
> > 5-wpm Morse code test?
> >
>
> Yes. No hidden agenda here.

No, there's no hidden agenda. If you take away the passion and whining from BOTH sides of the equation, it becomes obvious that the code test is really not the issue. It's the effort. If the writtens were made more difficult and the published Q&A pools eliminated, the whining would then continue. The common denominator...the effort involved.

> > Why must we reduce our beloved hobby/service to the lowest commen
> > denominator?

Oops, my bad. That should read "common." Gotta pay more attention. <hihi>

> > 73 de Bert
> > WA2SI

Like I said before, Alun. It's ok to just agree to disagree. Take care.

While enforcement might prove difficult, the implementation
of a power limit would, I believe, not be violated by the
majority of hams. Those of us that were Novices at one time
lived with a 75 watt limit. Did some novices violate
that? Probably, but by and large, most stayed within the
legal limit.

Cheers,

Indeed it is. I think if it had been approached differently a lot more countries would have been willing to help. As it is, Bush and Blair, etc. have got themselves into a hole.

You were never in the Amateur Radio Service. That is the focus
of this Newsgroup. Your service in the Armed Forces is not.

> I used real walkie-talkies and handie-talkies (AN/PRC-8 and AN/PRC-6,
> respectively). Never needed any morse code proficiency to use those.

Neither of those radios were commonplace in the Amateur Radio
Service. That is the focus of this Newsgroup. Army surplus is not.

> I even transmitted on HF with many KiloWatts of RF power, never had
> to use any morse code proficiency thing for that.

You did not require Morse Code proficiency since radio clerks
didn't require it. Again you try to analogize your military service
with Amateur Radio. They are not comparable.

> The only "code" I learned as a kid was deciphering "secret messages"
> sent over a radio show (Captain Midnight?) which amounted to "drink
> Ovaltine."

Most of your "practical experience" in any phase of radio comes
from the 1950's and 1960's. Amateur Radio has long since left those
decades.

You should too.

> Morse code manual telegraphy is 159 years old. It shows up in old-
> time movies and TV shows, especially Westerns.

The "telegraphy" demonstrated on those old movies was not the
Morse Code employed by the Amateur Radio Service in the 21st century.
Please try and look past YOUR past, Lennie.

Please do. I sent an e mail to "CQ" and routed copies to the
three authors. I actually got a very nice response from KL7CC.

I doubt Maia will ever respond.

> > While I am a big proponent of CLOSING the question pools and

I am all for a GOOD "Novice" class proposal as long as it
represents some RESPONSIBLE ideas. Deleting rules and regulations and
safety issues is NOT it!

Unfortunately it's the FCC's past track record to latch on to
some really bad ideas...

Had al-Queda not used the Palestinian cause as it's justification
for the attacks on WTC, I'd send a letter to Washington and tell them
to let Israel duke it out on their own.

President Bush recently said the US has no greater friend than
Isreal, but the only thing >>I<< see from our association with them is
death, violence and war.

> One of the most civilized things that the USofA does is that we have

Yep. We infused billions of dollars into Japan and Germany, and
look where they are today.

I think it takes a really narrow-minded person to NOT be able to
see the parallels between the way the WW2 era Germans treated Jews,
and how Jews presently treat Palestinians. Thank God there's no

concentration camps, but I am more than a little bit embarrassed when I see yet another fugitive camp being patrolled with soldiers carrying M-16's or AH-1W Cobras.

Morse is not required to obtain an amateur radio license in the US.
It is only required to obtain the General class license (and by
inference the Extra class license, which has the General class license
as a prerequisite). Morse has not been a licensing requirement in the
US for several years now.

Two reasons:

1) I happened to have those numbers recorded

2) By that date, it's reasonable to expect that all of the backlog from before
the April 15 changes had gone through FCC.

> Restructuring took effect a month

>

It's fine for them to go 20 mph above the speed limit. It's fine if they
want to go 30-40 mph above the speed limit. But, they won't find me moving
out of their way; they'll have to go around because I am not moving into a
lane where I have to slow down, or even get "stuck" there for a while, if
there happens to be more than one vehicle that wants to go past.

This is an "every morning" thing. If they want to get to where they are
going quicker, then they need to adjust their scheduling, not make others on
the road cater to their needs. I would not think of being obnoxious because
I have to get somewhere quicker than anyone else--I would make the decision
to get on the road earlier.

>
> Suppose you're sailing along on your 60 mph 4-lane-divided (2 lanes

>
> What would you do? Would their behavior bother you?
>

Yes, their behavior would bother me--*but* they're the cops...and they have that latitude. What would I do? I'd follow along, in the left hand lane. The fun part would be when someone angrily pulls out to the right and would be jumping up alongside to go around before they'd notice that they were acting like that with cops right there. <GRIN>

> >
> > I am already going faster than the posted speed is my point. Why should

> though you're going as fast as *you* want.
>

Then they should have gotten out earlier than me. It's the same principle as someone who's standing in the "fast" lane (misnomer most of the time--GRIN) at the grocery store and I am ahead of them with 10 items and they only have one or two. If they're prone to it, they'll tap their foot; sigh real loud, etc. Practically fall over trying to get me to notice that they only have "just this little bit." And, how dare I *not* yield to them and let them go ahead...and the next with one or two...and the next, etc. Hey, next time, get there before me.

>
> Why does anyone *need* to speed in a nonemergency situation? How much
> time does going 70-75 save vs. 60 on that same road?
> >

Actually, none...and I learned that in Driver's Education in High School. It was proven out a few times, too. I don't know if I am really speeding because of having to get somewhere quicker--in fact in the mornings that would be probably not. I leave 45 min. ahead of time most of the time, to get to a 20-25 min. destination. I leave early enough to account for traffic also. And, I am very fortunate to have a job that doesn't make me punch the timeclock.

In my case, my 70-75 mph (more near 70 most of the time) is probably more due to the fact that, that is where my foot lands on the gas pedal. And, it is the predominant flow of traffic...70-75, with the exception of those obnoxious folks we're discussing here.

> >
> > Well, myself included, one does not think of these things (tickets)
> > happening when one is breaking the speed limit.
>
> I think about 'em all the time. Not just the fine but the points.

>

I should probably count my blessings here, because this will jinx me. I've
been stopped three times in my driving "career." Little enough that I still
don't "know the routine" when I do get stopped. Only once I've been
ticketed and that was for taking a turn onto a street that doesn't allow
those turns at the time of morning I was doing it.

> > >
> >

> > get out of my way.
>
> What if they're going the speed limit?
>
> Why is it OK for you to go 15 over but not OK for someone else to go
> 20 over?
> >

If they are going the speed limit where I am at (in the left lane), I'd
still calmly make the move to the right lane and go around them--when it was
safe to--and wouldn't act like an idiot to them. It is not any more "right"
for me to speed than the next person--it's just that they'd better decide to
go around, because I will not be moving for them just because they are going
to act like an idiot. I will move if I decide to...and I usually don't.
But it's just as OK for them to be speeding as me...I don't care. You seem
to be stuck on the idea that I think they are wrong to speed faster than I
speed. No. We're all just as wrong as each other for speeding, no matter
how fast. But, I don't like their "I gotta get there faster than you gotta
get there" attitude. And, since I am the one in the lead at that
point--well, then, my attitude is the one that's important <GRIN>.

Yeah, that was what I did a few...OK, more than a few...years ago. I'd always do just that, as a matter of fact. BUT, one day, this guy began throwing things out his window at me when I did finally move over and let him go passed me! Scared the heck outta me...he was throwing anything loose in his car, bottle caps, cracker jack box, etc. Thank goodness he didn't come across the bottle! That's another reason I'm not so sure about letting creepy people get ahead of me...it may be me having to come upon them once again...

The concept is genuine, I am sure. However, it doesn't hold water across the board for me, so it doesn't hold water for the CW testing in the ARS venue, either. If I know I am not going to like something--say for example jumping out of a plane--then I am not interested in trying it. I know I will not like CW usage, based on the time it took me to learn it and the misunderstanding I have about using it for communicating when speaking is my preferred mode of communication. And, other than declarations to the contrary, I have not seen--and will not buy--that it (CW testing) creates any better a ham in *any* way.

Ahem. And the coded-Tech+ license. And, did you know that a Tech who has passed their 5 wpm CW can stay there forever (and get on at least the Tech+ portion of the 10-M phone band)? It's just that their CW endorsement for license upgrade to General is only good for one year.

And, I like the fact that 5 wpm gets folks onto a little HF phone. It's a very small portion of a very large chunk of spectrum.

> I seem to have found them...on the bottom of 40. Interestingly enough, I've

Oh, cool. Yeah, hearing CW on CB is what I've heard expose a lot of folks to amateur radio--when the questions start getting asked about what "that" is and why it's being practiced, etc.

> > It's pretty much as simple as folks who do or don't like most other things

I don't know about "dearly" loving the ARS...LOL However, I also don't think the non-CW test gang diminishes the value of the ARS--except to those who value CW. And, that is quite contrary. Your value of CW is greatly recognized by more non-CW folks than you apparently realize. I'd never infringe on your valuation of it, never infringe--and would defend--frequency allocation for CW, and also would always be a proponent of its tradition in amateur radio. My experience shows me that more of us non-CW folks believe that, than not.

Well, you hit the nail on the head with that one. The CW vs. no-CW debate, for the most part, has nothing to do with the "love" of the mode and way more to do with attitude; and that has a lot to do with how strongly one becomes motivated by the debate, I might add.

I know, Kim. That's why I didn't just write Technician, I specified no-code
Technician.

> And, I like the fact that 5 wpm gets folks onto a little HF phone. It's a

I do too. I think they're gonna get it without the 5-wpm test tho. Perhaps
Element 1 shall be retained for the General and Extra?

I used it ther for a while with a neice. We used a whopping 100mW and
traversed approx. 15 mi. through some pretty CBish QRM. That kinda got my
attention. I have heard higher speed ops on ch. 38, however, I suspect
they're not using Part 15 devices.

I'm very surprised you would argue this. Do you really believe these people have the power to cast spells? Witches, spells, charms, and other such nonsense, are superstitions, not religions.

> Which people?
>
> There have been times and places where
> religions like Christianity and Judaism
> were not "legitimate religions" because
> "people" said they weren't.

In those places and those times, perhaps Christianity and Judaism were not legitimate religions for those people. Religions are people, Jim. One cannot exist without the other. Therefore, people are the only ones who can possibly decide what is and what is not a legitimate religion. If that is not going to be the case, if people cannot decide for themselves which is and which isn't a ligitimate religion, exactly who or what would you suggest should - an empty courtroom without people?

Or, to get back to your specific question, if the people of those times and places didn't believe in, or accept, Christianity or Judaism, why should they be judged negatively for that? They have just as much right to believe in, or not believe in, what they want as Christians or Jews do.

> Are the spiritual beliefs of Native Americans
> "not legitimate"?

Not for me. Those beliefs might be legitimate for someone else. But, beyond their right to practice those beliefs, why should I have any interest whatsoever? None of it becomes an issue for me until it is advocated towards me and others. At that point, I have a right to participate in the discussion - including a right to say it is hogwash.

> I disagree! Popularity is not a basis for such
> decisions. Ask Galileo about the validity of
> the "vast majority"..

So, again, what is the basis for such decisions? If people cannot do so, exactly who or what should decide?

> So? Can anyone *prove* that the old books
> upon whioch many "legitimate" religions are
> based are not fictional - or at least partly
> fictional? Yet millions believe they are literally
> true.

Religious material and literature written by those who practice a religion are certainly more far more legitimate than images and stories from fictional movies, television, and books. I'm not saying mainstream religious material and literature is accurate or truthful, just far more legitimate as far as religion is concerned. When a religion's material and literature can only be traced back to cult figures (using fictional movies, television, and books as a basis, such as with the wiccas), it does lack credibility as far as I'm concerned.

> How are they different?

I've already answered that - people from most ligitimate religions don't claim to have personal powers, especially powers they can't prove when asked to do so. As I've said before, I would ask for similar proof from anyone, in any religion, who claimed to have such powers (any powers).

> Sure they have. You divide religions into
> two groups according to your judgement.

According to the dictionary, discrimination is the "unfair treatment of a person or group on the basis of prejudice." Since no "treatment of a person or group" is involved, words cannot discriminate in this sense. Prejudice is also not involved. Instead, I've researched a subject and formed an opinion.

> and concisely.

Hans didn't explain it at all. Instead, he side-stepped the issue of personal opinion with nonsense about the world's population. I don't have the power to judge the ligitimacy of a religion as far as the world's population is concerned, nor have I ever claimed to be trying to do so. Instead, I've offered my personal opinion based on my research into this subject. Hans has said nothing whatsoever to change that.

To "retain" something, it has to exist. Morse code, as "a requirement to obtain an amateur radio license," hasn't existed for quite a few years. Perhaps you should rephrase that to fit the current reality.

Several have said that, but I just don't see what can be added that wouldn't fundamentality change the nature of the Amateur Radio Service. As I see it, this is an amateur activity designed with three basic goals in mind - provide some radio services to others (public service), some benefit to the participants (recreational radio activities), and a mild introduction to the field of electronics. Since the first two (and international goodwill) don't seem to be a consideration, I'll ignore those for now.

This leaves the last and a question about how far that should be taken. Most are not clear at all about that. Some seem to suggest we add content to more closely fit a college degree program. If so, do we add science, history, social studies, general math, politics, language, art, economics, health, and the other things colleges require? If not, can we honestly claim the license is comprehensive training? But if we add those things, what happens to the avocational nature of this activity?

I've looked over the current written tests. I just don't see where they're lacking as far as the existing goals and purposes of the Amateur Radio Service are concerned.

That's a tired, old, debate, Hans. One that I'm rather surprised would still bother you. It's a "Technician" license in an "Amateur" Radio Service. That hardly suggests an overwhelming degree of training, skills, or qualifications. If you want to make those names into something more that that, some would certainly object to "Extra" as an adverb meaning unusual or exceptional. You're far from exceptional.

As for the chlorine, you might want to poke around Northeastern Utah and Southeastern Idaho. The Defense Department in that area has been hiring a lot of people with biology and chemistry degrees over the last decade or so. Considering the number of job listings, I cannot help but wonder what they're up to.

Very funny, Hans. However, as previously stated, I have no interest in getting the General at this time. In fact, I'm not even that active with my current license. I've looked over the license tests several times over the last few years, the most recent to was when the tests were redone to see if any significant changes were made.

Only one situation might immediately cause me to consider a new license class - if there was a possibility for us to go overseas again for a length of time where getting another license would be difficult. In that case, I would get a General, and perhaps even the Extra, in case I might want that capability while overseas.

Other than that, my interest in the other license classes will probably not go beyond casual curiosity anytime soon.

I know Robbie...but you know what? That is what we are counting on. The left, getting more extreme, thus totally allienating the rest of the country.

I see where the 'Hollywood elite' are getting all geared up for the major whine-a-thon. Weren't they gonna leave the country a couple years ago ?

The Soviet Union never reduced their nukes one little bit. The Soviet Union went extinct and the Russians reduced them. Course there was no choice, since most of them were...and still are...in the Ukraine.

If you think the Russians are not a threat...wait till they get out of their depression. They are just waiting on the US to self destruct, so they can take over.

I wouldn't trust that ex KGB agent in Moscow any more that I trusted Bill Klintoon.

It is not the 'immigration policy' that is so bad. Its the wide open borders that are a real problem.

Excuse me Steve, but I don't remember the Jews of Europe, in the pre NAZI days, sending in human bombs. Or shooting at soldiers, or declaring that Isreal has no right to exist.

I think your compairison is flawed.

Israel has no choice but to fight. If they do not they will indeed cease to exist.

So why do you go 20 mph over the speed limit as you admit to? Why don't
you get on the road earlier so you can drive within the speed limit to
get where you need to on time?
I suppose if someone is going 10 mph over the limit, you expect them to
get out of your way so you can do 20 mph over, right?

"Hammer, meet nail."

I don't even think we need to change the questions. Eliminate the published
Q&A pools and reorder the answers, that'll do it.

Q. Do what?

A. Require just a hair more cerebral activity than rote memorization.

That may well be as *you* see it, but according to their rules going back at least 50 years, FCC goals aren't about "a mild introduction" to electronics. From 1950's Part 12, paragraph 12.0(d) "Expansion of the existing reservoir within the amateur radio service of ..... ELECTRONICS EXPERTS". From the contemporary Part 97, paragraph 97.1(d) "Expansion of the existing reservoir within the amateur radio service of ..... ELECTRONICS EXPERTS".

> Some seem to suggest we add content to
> more closely fit a college degree program.

I haven't seen any such suggestion here (or anywhere else). My proposal suggests that the standard full-privilege qualifications should be essentially equivalent to the current Amateur Extra written examination. Since there are numerous examples of pre-teen children who have met that level of qualification, it certainly doesn't rise to the level of a "college degree program".

3695. Stuck?

Newsgroup: rec.radio.amateur.policy
Date: 2003-12-02 18:34:52 UTC
From: Jerry Oxendine <joxendi@bellsouth.net>
Message-ID: <jW4zb.13486$5d.13441@bignews4.bellsouth.net>
Source record: 83221

This is not exactly Amateur Radio, but I thought I would run it by and see what you thought.

I know there are "odd" ducks on the internet, and every once in a while, one accidentally runs across a website that is perplexing to say the least. Yesterday, I ran across a website run by a Mr. "Sir Stuck Alot", and it is devoted to becoming mired in the mud with both new and old pictures. Surely, some of these pictures showed people hopeless bogged down and some of them in real predicaments. Some would make one wonder how they got into such a fix, or why they were in that particular locale in the first place. I mean, *most* reasonable people wouldn't drive into creeks, rivers, bogs, pastures snowbanks, etc.

When I was a child, we kids thought it was VERY funny
when our parents got stuck and we helped to push them with excited glee. The muddier, the better, the more stuck
we were, the funnier it was, and we were fascinated by spinning wheels. We would even contrive ways for people to stick up----such as jacking up a parent's car and putting a block under the wheel (good way to tear up a transmission, but we were 11 years and didn't know), or by putting a scooped-out watermelon rind under the
rear wheel. All so we could see Fred's '49 Ford spin a
bit until it wore out the rind and caught traction. Not to
mention the puzzled reaction of poor Fred who was wondering why his car wouldn't move on DRY ground.
Back in the '50s, side roads often were not paved and turned into seas of mud into which our school busses slid
and got stuck up; indeed, we grammar school kids would
rock back and forth trying to cause the thing to slide in the ditch. We LOVED to be late for school on such mornings! In the morning, to the smell of coal and hiss of
steam radiators, the principal would also announce over the PA, "The following busses are late on account of being stuck up (in a mudhole)". All this was great fun--
when you are a kid. We imitated cars with paper plates
(for steering wheels), and ran around the yard pretending we were stuck, gunning our "engines" and rocking our 'cars' back and forth (like Daddy did when he got mired). We'd "push" each other, one of us resisting while the other leaned against the other with all his might, and making loud motor noises (Ung, Ung, Ung, UUUUUUNNH! and clashing his gears)--sort of a tug-of-war in reverse.
Sometimes, failing to unstick (move the stronger kid) the "car", another buddy would join in and push with all HIS might--all while making all this racket (ungh, ungh,
UNGH, UNNNNNNNNNGH!) as if we were a 50 Chevy six-cyl! LOL!

Now. Most of us grew up, got licenses, drove cars, got
married, had kids, etc,go ham licenses, and forgot about childish play. We drove prudently (well, not always) except for the occasional burn-out or donut in the high school parking lot, and eventually forgot about being "stuck". Indeed, we avoided becoming stuck, going around mudholes, staying out of snowdrifts, and, well,
just not going where we figured we might not make it.

Perhaps the person that put up that website is grown, perhaps not (maybe still a kid) or, perhaps, an adult that is immature? As we get older, we (I hope) retain a sense of humor, but things such as being stuck up in the mud fails to invoke humor to me. I haven't gotten in such a fix
in YEARS because I'd like to think I exercise caution and
maturity enough not to go into a place that might not be
"safe".

So, while it could be mildly funny to see a friend bog down in the mud or get stuck up in a snowdrift, is this website really telling me that there are people that never grow up? The site strikes me as silly and very immature. Or am I missing something here?

No more immature than a grown man who chases trucks up and
down interstate highways, trying to figure out what CB channel
they are transmitting on. Then constantly pestering a busy federal
official with childish "reports" of such activity. Errrr, sound like
an immature person you know Ox?

Growing older is mandatory. Growing up is optional. You're jeremiad
suggests that you have grown up. A pity!

If "silly" is mildly offensive to you as it seems in this case, then by all
means avoid silliness. In my world, silliness is the lubrication which
eases the daily grind, and I'm disappointed that you didn't provide a URL so
I could see the antics of Sir Stuck Alot.

Nice editing to fit an agenda, Hans. However, the actual wording of 97.1(d) talks about expanding the existing reservoir of "trained operators, technicians, and electronics experts," not just "electronics experts." The FCC never intended for this radio service to be made up of electronics experts, or for all operators to become electronics experts. Thanks to the introduction to electronics Amateur Radio offers, some will become interested enough to seek outside education in some field of electronics - the real experts. Most will never be interested enough to go that far (home-brewing or lesser electronics jobs). And perhaps the vast majority will happily go through life as trained operators. Whatever the case, the goals of 97.1(d) are fulfilled.

It seems that you have to violate rules "on purpose" several times
before the FCC
starts working on it. Modern equipment rarely causes problems (like
excessive
splatter or harmonics). I'm talking about stuff from the major
manufacturers
(Yeacomwood), not the "freeband" "linayes".
And who hasn't, by mistake, operate the wrong mode in some subband? Like
answering a foreign phone CQ on 7140? Oops... Most people will not make
a habit of doing that, but once or twice over the years. The FCC
realizes that
errors do happen, and that most people will realize the error and
correct it themselves
without the FCC having to do anything about it.

This convenient ploy is the rallying cry of the QCAO but it
lacks any foundation of credibility when you consider that
the successful applicant for *any* amateur license is authorized
to build his own station. Would you want me putting my homebrewed
"creation" on your favorite VHF band if I hadn't even demonstrated
a working knowledge of Th&#65533;v&#65533;nins theorum? Get real!

73, de Hans, K0HB

News Release:

QCAO Reorganizes

The Quarter Century Appliance Operators was founded in the
early 1950's by a small group of Amateur Radio operators from
the Pacific Northwest. They had been active in their hobby for
over 25 years, yet still lacked the basic knowledge of radio
electronics and had no idea of how their equipment worked.

They banded together to try and protect each others honor
and pride. At radio gatherings and club meetings in the 1950s
one was considered unworthy of the name Ham Radio Operator if
he or she couldn't not only name components, but know how to
solder them together and make a radio work, or fix a broken set!

When faced with insults and dreision, those few hardy
pioneers banded together and formed the First Chapter and
National Organization of the QCAO. This was known as the "Cold
Solder" Chapter. They even coined the now-famous club byword
"e pluribus ignoramae" which is Latin for "We don't have to know
how to solder, we just wanna talk on our radios."

No veterans of that first chapter are known to be active on
the air today. In the late 1950s and early '60s, with the
worldwide interest in science and space and technology, the QCAO
membership went underground.

It is with great pride and dignity that today in the 21st Century the revived QCAO stands ready to rise from the ashes, and become the standard of mediocrity it once proudly was. In honor of those first pioneering members, QCAO hereby invites all eligible applicants to step forward and join!

The benefits of QCAO include not only the pride of membership. Think of the warm glow you will feel at club meetings and gatherings showing off your new all-plastic imprinted QCAO pocket protector! And that's not all! For your minimal membership fee, you will also receive a handsome, suitable-for-framing, certificate of honor, with hand-lettered name and Charter Membership Number. Other QCAO memorabilia will soon be available for members, including T-shirts, caps, pins, etc. At this date charter membership numbers are still available. Membership requires a 25 years (more or less) interest in Amateur Radio, coupled with a basic ignorance of how radios work and how to repair them.

Think of meeting other QCAO members on the air! No more embarrassing pauses when someone in the QSO mentions an RF choke or a parasitic bleeder...Be able to exchange meaningful sharing, talk about real things, yes, even swap QCAO numbers with each other! And soon perhaps . . . a worldwide QCAO contest!

You no longer have to shrink to the back of the room at post-meeting sessions of your radio club. Just display your QCAO protector and others will be able to identify you immediately. Who knows? Perhaps one of the originals from that old QCAO Chapter is just waiting for you to find him. Join now! Remember "We don't have to know how to solder, we just wanna talk on our radios"! Don't let technoids embarrass you and kick jargon in your face. Stand up for what's right! Join QCAO!

The rules have a wide assortment of power level restrictions below 100W,
some as low as 2.5W, Many of them apply to every license class. Can I
presume from your flip answer that we can safely ignore those limits because
it would be an "invasion of privacy" for FCC to enforce them?

> legal limit.

But even if that is the case, it would seem to me to make more sense to us a limit that is easily handled by virtue of equipment that will handle the limit already on the market.

Would the manufacturers make equipment that only put out 50 watts? Possibly, but what will be the resale value of the equipment? So the new Class A ham has to go out and buy a new rig to make use of his or her new priveliges? Remember not everyone wants to run a lot of power. 100 watts is something most people are comfortable with.

And the rationale for the reduction of power needs to be proven to me anyway. How many Technicians have been hurt by using more than 50 watts power?

And do you think that the prospective ham should not know about RF safety until they reach the equivalent of an Extra? This plan seems to advocate that.

Wow, you slippery sloped that one pretty well, Dwight! I'm not looking
for the equivalent of an engineering degree, and would never suggest
such a thing. I don't think that the addition of some relevant questions
to the writtens is at all a bad thing. And even an EE degree is only
partly relevant to the ARS.

> I've looked over the current written tests. I just don't see where they're

This brings up something that I have wondered about for a while. What
is the basis for so many people avoiding education with a passion? It

isn't like even the Extra test is all that difficult. Takes some study
and time, but it isn't like the SAT's or the like.

> And there it is. WHY?

Mike, I know it scares the bejeebers out of the professional-entry-level licensees out there who have essentially zero interest in whatever electrical thing happens when they mash the PPT switch, but by their license grant they are responsible for a ensuring that their transmitted signal meets a set of technical parameters beyond what the little blinky digits on the faceplate read.

The current qualification process is woefully inadequate to ensure they can fulfill that responsibility. The current rules have kept most of these QCAO members in parts of the spectrum which have mostly local propagation, even with 1.5KW output.

However, we can soon expect rules changes which may extend their turf to parts of the spectrum where their ignorance can have worldwide visibility and consequences. And that scares the bejeebers out of me.

> Would the manufacturers make equipment that only put out 50 watts?

I think they would if the market existed. In JA there is a class of 10W HF hams, and there are all sorts of nice 10W HF rigs available there.

But let's just suppose that the manufacturers continue to build only 100W HF rigs for the US market. It's not the manufacturers responsibility to comply with the power limits. That responsibility lies with each individual licensee.

In my experience, hams are almost universally scrupulous in observing the limitations that their license grant imposes on them.

Not at all, Len. I am proposing a huge increase in newcomer privileges with an entry level test far more elementary than the current entry-level examination.

But I am also recommending, after a generous period with 'training wheels', a more strenuous qualification for standard privileges than currently exists. The QCAO and IOoDHW cries of "the unfairness of it all" are deafening.

But there IS a mandate that each licensee is directly responsible for the
proper adjustment and operation of their equipment, including all sorts of
QCAO-unfriendly things like signal purity, etc. 97.307(a) thru (e) come to
mind. Personally, I don't believe that your (misnamed) Technician
qualification examination is adequate to ensure that you can carry out that
mandate.

If you've been following the discussion in this thread, and in general over the last couple of years, it wasn't slippery sloped that much. It was only a very slight exaggeration of what some (I'm not saying you) seem to want.

I can't speak for others, Mike. But, in our case, it's not avoiding education per se. Education is a routine in this household. We're both college graduates. Correspondence courses, college courses, and technical seminars, are endless. We're both looking towards retirement and want to change directions in our lives. To do that, we've both recently went back to school. I just completed an associate degree in electronics (thought I'd play around with it a little more seriously) and my wife just completed a BA (math major/history minor) and will start her masters degree program in January (secondary education). On top of that, we own several businesses, have a full social life, and have several volunteer activities we're involved in. Plus we like to have a little time for other things (like this newsgroup, spending time together, and so on). That leaves very little time for other things. Since we don't really have a place to fully exploit HF, and don't want to waste time learning code, getting another license class is just not that high on our list of things to do.

Yet there are no widespread problems, reported by the FCC or other organizations, relating to that. How can that be, Hans? Perhaps you're wrong about your assessment of a large portion of this radio community.

> The current rules have kept most... (snip)

Out of band emissions, and so on, are not dependant on HF, Hans. Again, no widespread problems relating to that.

Yet that very thing is happening in many countries around the world, with none yet reporting any problems whatsoever. Or is it just American operators (their "ignorance") that scares the "bejeebers" out of you?

I am not eligible to petition the regulators in other countries, so my
proposal will only affect license applicants under FCC jurisdiction.
Hopefully there are responsible hams in other countries who will attempt to
ensure adequate qualification levels are maintained in most countries.

You muddy the waters. The point as I see it is that Technicians now
have access to much higher power levels. Equipment is already out that
has 100 watts, and you can be hurt by 50 watt units as well as 100 watt
units. And it makes an unenforceable power level for no real purpose. No
reason why the first class of license can't have enough RF information
that it is expected to know that it can safely operate 100 watts.

I presume there is evidence that Technicians are harming themselves now?
If not, you have a pretty weak argument.

Really? The FCC does think it is adequate. Regardless, I only saw a few questions in the Extra question pool (July, 2002) about signal purity (measurements and so on), none having to with the actual adjustment of equipment. That hardly makes someone with your license an expert in this regard.

Source record: 83247

"Mike Coslo" <mcoslo@adelphia.net> wrote

> And it makes an unenforceable power level for no real purpose.

Two points:

POINT A

This "unenforceable" mantra is a weak argument, which does not gain strength by the repetition.

Of course it's enforceable, or at least just as enforceable as power levels have ever been. "Unenforceable" is a complete cop out. If power level is not enforceable at 50W, then it's not enforceable at 2.5W, 25W, 50W ERP, 100W, 200W, or 1.5KW, all of which are power currently exist in FCC Amateur Radio regulations.

POINT B

That particular power level has a real purpose. The purpose is two-fold.

Purpose #1) It allows us to institute a "learners permit" class of license in which we can limit power to a level which FCC has stated is safe for both the user and unknowing passers-by.

Purpose #2) It allows us to institute a "learners permit" class of license in which the power level minimizes the unwanted side-effects of granting broad spectrum access to relatively underqualified operators. Now, before you spin up your rotors about "but QRP operators work around the world", bear in mind that most of the "bad" signals heard on HF are the result of ignorant operators trying to run a lot of power, and the consequent splatter, flat-topping, birdies, over-compression, etc. On the other hand, I've never heard a distorted or crappy QRP station. In further support of the idea is the fact that all these 100W-class rigs you keep harping on are running at near their designed-in upper capability, making them more likely to become purveyors of all the crappy-signal symptoms I just talked about. At 50W they are much less likely to be straining their design specifications and consequently radiating cleaner signals. In the hands of even a QCAO life-member it would be hard to splatter/chirp/over-modulate when you're running at half the design limit of the rig.

The only thing I've heard is cries for proof that your license proposal actually addresses a real need within the Amateur Radio Service - something that fits the goals and purposes of that. What you've offered so far has certainly not provided that proof.

I'd bet you would too. I had a slightly unfair advantage, a college avionics
curriculum that culminated in a GROL. However, in order to earn our
sheepskins, we had to pass screening exams...no published Q&A pools. Same
applied to our FAA exams.

> BTW, Bert, did you know that they change the order of the answers in the
> actual test as compared to the question pool?

Didn't really notice. Once you review the Q&A pool, the correct answer stands out like a sore thumb. I reviewed the Q&A pool twice and drove and hour so to Yonkers, NY...for approx. six minutes of actual exam time. (& that gave me privies to 1500 Watts on 50 MHz and up?!)

Of course there isn't any evidence of that, Mike. As I said earlier, Hans' proposal appears to be a solution looking for a problem (an answer looking for a question). Actually, after reading what he's said about it in this thread, his proposal really appears to be nothing more than a way for Hans to build up his own self-image by belittling Technicians (and to a lesser extent Generals).

Stewart, there's no polite way for me to say this. With your QCAO agenda so thoroughly clouding your thought processes, you wouldn't recognize proof if Mr. Proof in a monogrammed sweater jumped out of your computer screen and bit you square on the nose. So you cling to your "unfairness" and "unenforceable" jeremiads, even though they have both been refuted and discredited here with elementary logic.

The beauty of the situation is that I don't have to prove anything to you anyhow. I just have to persuade the FCC. ('Oh dear,' says God, 'I hadn't thought of that,' and promptly vanishes in a puff of logic. -- Douglas Adams, THGttG)

In the inbred world of rrap, there is no self-image to build.

And of course I haven't belittled any amateurs. I've only pointed out the inadequacies of the current qualification process and suggested an alternative. That you have decided to start bringing personality into the argument speaks volumes about the inadequacy of your arguments and logic skills.

>Code Yes or No

Yes. All U.S. Amateur Radio licensing requirements should be restored to those which were in place prior to February 15, 1991. All "no-code" Technician-
class licenses should be retroactively suspended for two years, in order to give those who hold them the time to meet the newly-reinstated licensing requirements. At the end of the two year "grace" period, those licenses would be revoked. Of course, this would not apply to anyone who upgraded to General, Advanced, or Amateur Extra prior to April 1, 2000, having taken and passed the requisite 5, 13, and 20 WPM code tests for their respective license classes.

Dwight:

Yes, she did make a mistake, but I recognized it as such, and instead of beating up on her, I made an attempt to help her out. I now find it necessary to go a step farther, and say that since she did make a simple (and common) grammatical error, that I apologize to Kim for the inference that she would have found the death of your brother to be "hilarious." Of course, had she not used that term in the first place, the confusion never would have occurred. Perhaps she will be more careful in the future.

> that gave me privies to 1500 Watts on 50 MHz and up?!)

Reminds me of the first time I took the General test. I got up early
and drove to the Hamfest in Butler PA from State College PA. Drank
several cups of coffee on the way. I took the writtens first, and no
problem acing it. Then the combination of the trip and too much coffee
kicked in as I sat down for the Morse code test. As they say in the
Bronx fuggitaboudit! So I had to wait a while for my ticket.

Which makes me wonder, I do not do Morse well under stress. I wonder how
some of those who had to do it under some awful condx ever managed.

Well, the border with Mexico seems to be almost impossible to close, from what I've seen. Probably the only way to fix the problem is to try to help fix the Mexican economy. Don't ask me how.

I saw a documentary on TV about migrants moving to work in factories just across the border on the Mexican side, and most of them seem to live in conditions that are as bad as anything we had in the Victorian era, i.e. during the original industrial revolution. What is interesting is that a minority of enlightened factory owners have built nice houses for their workers - exactly as happened over 100 years ago. However, most of the factory workers seem to live in shanties, places where water is something that is delivered by a truck.

It's no wonder that many of them would rather go a few miles further and cross the border if they can.

Exisitng equipment could still be used by LP licensees - they just have to turn it down by 3 dB.

>

>watts is something most people are comfortable with.

When the Novice was created back in 1951, the power limit was 75 watts input. Which works out to about 50 watts output.

In a short time there were many manufacturers making transmitters for the Novice market. Their resale value was good because there were always new Novices coming along looking for a bargain.

And those manufacturers had to compete with homebrew and surplus rigs which were in abundance back then. (One of the reasons Novices were limited to 75 w xtal control was so that homebrew rigs used by Novices would be kept simple).

In fact many Novices used less than the full power allowed.

Let's see...there was the Ameco AC-1, the Heath AT-1, DX-20, DX-35, DX-40, d DX-60 and HW-16, the Johnson Adventurer, Challenger, Navigator and Ranger, the Drake 2-NT, the Hallicrafters HT-40.......to name just a few.

And this was when the amateur radio market was a lot smaller than it is today.

>
> And the rationale for the reduction of power needs to be proven to me

Under Hans' plan, no existing hams would lose any privileges. So they don't have to worry.

>And do you think that the prospective ham should not know about RF
>safety until they reach the equivalent of an Extra? This plan seems to
>advocate that.

Until a few years ago there were no questions about RF exposure at all in the pools.

One question is being overlooked, though: Why are most manufactured rigs rated 100 watts? Why not 50 watts, or 250 watts, or something else? (A very few are rated at other power levels). Why 100.

The answer is about 50 years old.

I actually had a pretty good experience with Element 1...once it began. I had actually kinda over-prepped and was getting pretty nervous. Dick, N0BK (God rest his soul.) told me to stop practicing, get off my ar$e, and just give it a whirl.

When I arrived, it was all I could do NOT to throw up, until the code characters started flowing. I had practiced with the ARRL CD's and they turned out to be a tad faster than the actual exam. It was like gettin' ready to bat in the world series only to have the pitcher throw cantaloupe

sized balls in slow-motion...underhand. I went into immediate $hit-eating grin mode.

Then there's gettin' OTA...whole 'nutha story. ;-)

Ah, I see. The right lane is going 60-65, the left lane (with you in it by
yourself) is going 70-75, and you're not going to lose a few seconds in order
to accomodate someone who wants to go 80-85.
>
>This is an "every morning" thing. If they want to get to where they are

>
>Yes, their behavior would bother me--*but* they're the cops...

No, they're not!

I wrote: " two (non police) cars". Sorry if that wasn't clear!

What I meant was two ordinary drivers in ordinary vehicles - not police or
officials of any kind. Just two folks who decided to go the posted speed limit
and no faster.

What would you do?

>and they have
>that latitude. What would I do? I'd follow along, in the left hand lane.
>The fun part would be when someone angrily pulls out to the right and would
>be jumping up alongside to go around before they'd notice that they were
>acting like that with cops right there. <GRIN>

Except they're not cops.

I wonder why....;-)

> and that was for taking a turn onto a street that doesn't allow
>those turns at the time of morning I was doing it.

About 20 years ago, on a cold rainy Sunday night, I made a wrong turn onto a one way street in Philly. No "One Way" sign at the intersection, no "No Right Turn", just a stop sign. No cars on the street either.

Of course it didn't take long after the turn to realize something wasn't right, so I did a quick three-point turn. But it wasn't quick enough to avoid the notice of two of Philadelphia's finest, who turned on the lights and pulled me over.

By the time he got to my car I had the license, registration and insurance card out, both hands on the wheel, and the window down so he could talk to me.

He took my papers and proceeded to run them through the computer in his patrol car.

Meanwhile, the young lady who was with me started giving me the third degree as to how I was going to handle the cop, how it wasn't my fault, how I should "be a man" and "stand up to him" and "talk my way out of it". I held up one hand and said "Be quiet. I'm the driver, it's my car and my license, and I don't argue with the police over something as minor as a ticket. That's what traffic court is for."

Officer came back, asked if I knew why he stopped me. I said "I was going the wrong way on a one-way street because there's no sign at the intersection with Pine Street. I turned around as soon as I realized it was a one-way street, but you were right to stop me and I can understand if you decide to give me a ticket."

Officer handed me back my papers and said: "No ticket for you, your papers are all in order. We know all about the sign. Just be careful."

The young lady kept quiet, which was quite a miracle.

IOW, he was just waiting for somebody to give him a hard time.

Nope.

I'm stuck on the idea that you want to control the speed on the road.

> No. We're all just as wrong as each other for speeding, no matter

"Success has a thousand fathers but failure is an orphan"

In very broad terms, I think the long economic boom of the past decade-plus was driven by the combined factors of increased productivity, cheap and plentiful oil, the computer/telecom booms, low inflation and a *perception* of decreasing international political tension (Berlin Wall falls, Soviet bloc disintegrates, increasing trade with China).

A lot of that seems kinda quaint now, huh?

Still, the DJIA was around 3600 when Clinton took office and it's trying to bust 10,000 now...

I don't mean immigration policies. I mean the the way the USA allows people in on visas, and doesn't control those who stay illegally.

How did the 9/11 terrorists get into the USA? How much trouble was it for them to get past INS and set up shop here?

As for tough immigration, check out what is required to immigrate to New Zealand.

A key taxation question (which is almost never answered) is: "How much of a family's income is spent on taxes, and where does it go?" It would be very interesting to see the total tax burden percentages of a family of four making $50K, $100K, $150K, etc..

My guess is that the lower end would be dominated by Medicare, SS, and sales tax while the top end by real estate and income tax.

I think a lot of countries would have been willing to wait some more years.

The tough question in my mind is why the UN was willing to wait so many years
while SH defied the 1991 agreements.

The *first* time weapons inspectors were denied access to *anything* in Iraq,
they should have packed their bags and gone home. And as soon as the last
inspector was out of the country, coalition forces should have leveled the
denied facility with smart weapons. IOW, "if you don't let us inspect it, we'll
know you're hiding something".

Easy to Monday-morning quarterback, tho.

At the probability of ticking off everyone again.....that is not our
problem. (USA).

It is the problem of and the fault of the corupt Mexican governments.
Notice I said governments.

They have oil, they have a beautiful tourist location. But the officials
are too busy pocketing the gringo dollars.

I say put up a fence like the Berlin wall. And issue orders to shoot to
kill. That will end it.

I was at a hearing once where a shipboard operator was accused of
slugging the captain in the radio room. The other operator on duty
was being questioned as a witness, and was asked "did you see or hear
Mr. X have a fist-fight with the captain?". His reply: "when I sit
and copy the telegraph code that's all I concentrate on".

Not being a "morseman" as others call it, I admire someone who can
do that sort of concentration. (I've done it on 'phone, though.)

Incorrect, Dwight. There MUST be a MANDATE to conform to the wishes of the "QCAO" and their needs to be the CONTROLLING elements in amateur radio activities.

In this case, "option IS a failure."

MANDATE. Control. Issue orders. Comply. Conform.

>Radio regulations.

Then WHY have it?

Simply ISSUING ORDERS is a stupid idea without some reasoning
behind it.

So...why is the "maximum power" under your plan 50 W instead of
100 W?

Show your work.

>
>POINT B
>------------
>
>That particular power level has a real purpose. The purpose is two-fold.

Well, if YOU said it, it must have a "real purpose." :-)

>Purpose #1) It allows us to institute a "learners permit" class of license
>in which we can limit power to a level which FCC has stated is safe for both
>the user and unknowing passers-by.

What do you mean "we," white man?

I think you think you think more than the OET and the IEEE and the
USAF and the ANSI.

>Purpose #2) It allows us to institute a "learners permit" class of license
>in which the power level minimizes the unwanted side-effects of granting

>running at half the design limit of the rig.

Of course. A "learner's permit." As if the ONLY radio emitters in
the world came from amateur radio stations. :-)

Geez...for a work manager supposedly with a degree you sure don't
know much about equipment that can go wrong, be misadjusted, and
lots of other little nasties lurking inside electronics boxes. Tsk, tsk.

"In the hands of you QCAO members," the "expertise" in radio
matters went out the window if you think that RF power output is the
ONLY thing causing splatter/chirp/over-modulation (etc.).

Someone do something nasty in your wheaties this morning? :-)

"Dramatic?" :-)

Okay, I'm sure there is great "drama" in having to get together the
requisite cash to go out and buy NEW equipment so as to meet
the the NEW RF power output levels.

Meanwhile, ol Hans can fire up his 2.5 KW rig (with higher drive
level input) and be as safe as a bug in a rug...

"Technicians" are harming Hans' concept of what is "harmful." :-)

Hans hasn't shown his work proving that 50 W is okay while 100 W
is "harmful."

But...he still thinks the first recognized 1906 voice transmission was
done with a spark-gap transmitter...and that all modern cellphones
power-up by talking to cell sites automatically. :-)

A ten year license is hardly a learners permit.

>
> Purpose #2) It allows us to institute a "learners permit" class of license

The operators should be qualified.

> Now, before

And some of them are Generals and Extras. So a proposal to allow new
people on HF with less qualifications is probably not going to improve
the situation.

> On the other hand,
> I've never heard a distorted or crappy QRP station.

Ya want to operate qrp succesfully, you need to do things right. These
QRP'ers are not operating QRP because they are beginners. I suspect most
if not all of them are high quality, experienced ops.

> In further support of
> the idea is the fact that all these 100W-class rigs you keep harping on are

> and consequently radiating cleaner signals.

And that is quite irrelevent to the situation. If it was relevant
limiting them to 25 watts would be even better.

Considering your nonsense about QCAO, negative comments about Technicians, the lack of any valid reason for your proposal, the lack of any evidence supporting your claims, and so forth, I think your real intent was proven very nicely. If you've offered the same to the FCC, I suspect they will just as easily see through your proposal.

> And of course I haven't belittled any amateurs.

Of course you have. Your very proposal, recommending the Extra exam as the sole license exam for full privileges, suggests everyone except Extras are not educated enough and are therefore not qualified to be Amateur Radio operators. It also suggests the material covered on the first three written tests (Novice, Tech, and General), most of it not repeated in the Extra test, is not necessary - only the material in the Extra test is needed to be an Amateur Radio operator. Your proposal is the most elitest piece of garbage I've ever seen promoted in this radio service.

> I've only pointed out the inadequacies of the current
> qualification process and suggested an alternative.

Don't be silly, Hans. You haven't pointed out any inadequacies at all. Indeed, that is where the main objection to your proposal exists.

> That you have decided to start bringing personality into
> the argument speaks volumes about the inadequacy of
> your arguments and logic skills.

Your personality, your views, your bias, is at the very heart of your proposal, and therefore any discussion about this proposal.

Actually, read over the Extra question pool, Mike. It doesn't extensively cover RF exposure safety. Most of that is already covered in the Novice, Tech, and General, and only lightly repeated in the Extra pools (with perhaps one or two additions). Remember that each test builds onto the info in the previous tests (Techs take both the Novice and Tech tests). All tests now include some RF exposure safety questions to insure those who missed it on earlier tests (a General that didn't get the latest info on tests taken twenty years ago, for example) gets that info when they take the next test. And, finally, remember that Hans' proposal would entirely drop the Novice, Tech, and General (losing everything on those tests), making the Extra the sole license test for full privileges.

No argument with any of your points, Jim. But that isn't today. Today
the standard HF rig puts out 100 watts.

>> And the rationale for the reduction of power needs to be proven to me
>>anyway. How many Technicians have been hurt by using more than 50 watts

>>power?
>>
>

> have to worry.

But that isn't answering my question. Perhaps I should phrase it
better. If technicians, who are allowed to toy with 1500 Watts, are not
being harmed by their hobby, then what is the reason for limiting their
power? More on this in a minute

>>And do you think that the prospective ham should not know about RF
>>safety until they reach the equivalent of an Extra? This plan seems to
>>advocate that.
>
>
> Until a few years ago there were no questions about RF exposure at all in the
> pools.

Are you arguing for or against this, Jim? If there were no questions on
RF exposure, and hams did okay, but we should limit new hams to 50 watts
because of safety concerns - it just isn't a good argument to me.

> One question is being overlooked, though: Why are most manufactured rigs rated
> 100 watts? Why not 50 watts, or 250 watts, or something else? (A very few are
> rated at other power levels). Why 100.
>
> The answer is about 50 years old.

Sometimes change is good, and sometimes change is not so good.

All change comes from within the framework of what exists at the time of
the change.

If we were to propose a class A class B system from scratch, then I
might say this is a good idea.

But it isn't a system from scratch, it's a tack-on to another system.

So we'll end up with:

1. Technicians - 1.5 kW privileges but no HF privileges, license period
10 years renewable.

2. Generals - HF plus 1.5 kW privileges, but no access to Extra
sections. License period ten years renewable.

3. Extras - all privileges, license period ten years renewable.

4. Class B - all privileges, 50 watt power limit, license period 10
years non renewable.

5. Class A - All privileges, full power, non expiring license.

Now I would like to know why this is a better system than what I would propose, a 3 tier system in which the setup is much like today. The only difference would be that if Morse code testing were to go away, the writtens would be beefed up a bit.

I suspect this system would more likely find favor with the FCC. No new databases, and similar to something already in place.

All the safety issues are moot. I haven't seen the harm done by over 50 watts. In fact, is it even that *good* of an idea to look at limiting power on the basis of "safety"? I mean if 50 Watts is safer than 100, maybe 25 is safer than 50. Maybe the FCC should look very closely at the power levels that hams use. Maybe all hams should be limited in power so we don't hurt ourselves with RF. Could be a real can of worms to open.

Power levels have been set by the FCC for decades. Perhaps you can
adequately logical reasons why such would be considered unfair or
unenforceable, kinly old gent.

> All you've done so far is to ISSUE ORDERS OF THE DAY. No "logic,"

In another post there was discussion about QRPers being mostly experienced,
operators, not beginners.

But back in 1967, when I got my Novice at the age of 13, my first transmitter
(homebrew, of course) ran all of 10 watts input. Output was maybe 5 to 7 watts,
antenna was a wire out to the crab apple tree in the back yard. Had a lot of
fun on 80 CW with that setup, even though I was not very skilled back then.

My point is simply that when the new license appeared, the manufacturers
quickly came up with rigs that matched the privileges of the license.

How much time do you think it would take Ikensu to come up with 40-50 watt
versions of their rigs? Heck, they already make 10 watt versions for their
domestic market.
>
>>> And the rationale for the reduction of power needs to be proven to me

>because of safety concerns - it just isn't a good argument to me.

The hazards of RF exposure, even at relatively low levels, are better
understood now than before. But there is still a lot of work to be done.
Meanwhile, it makes sense to reduce exposure when possible.

I see it differently. First off, Extra and Class A will probably be merged
because there's essentially no difference. Maybe when an Extra renews, he/she
would get a nonexpiring Class A

Second, we'd still have Novices and Advanceds as well as the other classes,
until the last of those licenses expires or upgrades.
>

It was done 7 years ago. In detail. That's how we got the curent rules.

I don't agree with all of Hans' proposal, but he *does* present some fresh new ideas, rather than simply patching up the old 1951 vintage system one more time.

And his proposal isn't just another "get rid of the code test and everything will be fine" things, either.

It's really fascinating to read the reactions, too.

--

And now the answer to the "why 100 watts?" question.

The following is Just My Opinion.

Back about 1950 or so, RCA announced a new transmitting tube, the 6146. It had been designed to eliminate many of the problems encountered with other tubes of similar power rating, like the 807. Its design was based in part on comments and suggestions from ARRL Technical Editor George Grammer (SK)

The 6146 was an instant hit with hams, because its electrical and mechanical characteristics were just what hams were looking for. A single tube would produce 50-60 watts on HF at full ratings, and a pair would do 100-120 watts output. Both homebrewers and manufacturers used the 6146 and its cousins (6883, 6159, etc.) in a variety of ham rigs. The most popular setup was a pair of them, producing a nominal 100 watts. Many small rigs used one tube, and at least two (Johnson Viking Valiant, Yaesu FT-102) used three of them. Of all the ham rigs made with tube finals, probably the most popular setup was "a pair of 6146s".

(but none of the Southgate rigs use that tube!)

When SSB transceivers became popular, almost all of them followed the lead set by Collins in the KWM-1 and KWM-2, and used a pair of 6146s to get 100 W.

One noticeable exception was Drake, who used sweep tubes. Oddly enough, many Drake owners are converting their rigs to use (you guessed it) 6146s.

So when transistors began to replace tubes in the final stages of ham rigs, most of the manufacturers designed for the 100 W power level.

On top of all this was the development of grounded-grid zero bias "Class B" (actually, Class AB2) linear amplifiers for amateur SSB use in the 1950s and '60s. Most designs required "50 to 100 watts" of drive power - perfect match for the usual 100W rig. A quad of 811As, pair of 572Bs, a single or pair of 3-400Zs or 3-500Zs, or a single 3-1000Z were (and still are) common designs. Now ee have ceramic-metal indirectly heated tubes like the 3CX800A7 which require less drive, but the old habits die hard...

The main strategy to control this is the I-9 form that everyone fills in to get a job, even US citizens. The easiest way around that is probably to work "off the books" for cash. I'm not sure how this could ever be stopped.

In the case of student visas, as were used in the 911 attacks, it does seem that immigration ought to check with colleges to see if the students are still there.

I keep hearing the claim that Morse code is still the easiest way to get on the air,but it isn't so. Most radios come with a microphone and all you have to do is look up the power and antenna. to operate worse code. You also have to buy a key and the operating requirements are more stringent,

For operating phone, you can set the radio up on a table. Next to your easy chair.To operate Morse code, you need a good table to hold the key,and raced your arm on and a chair to keep you in the proper posture.

On the other hand, some people require even more equipment to operate Morse code, Because I have Parkinson's disease I am unable to use a manual key or and if I were to use Morse: I would either need a computer keyboard with good macros or modify a speech to text program to provide my input, and since I can't write five words a minute and would either need a Morse to text converter or at the least a keyboard with a notebook program, I would be better off using RTTY or some other digital modes rather than Morse code.

As far as learning Morse code what is the point? I will never be able to use it and in my case, why should I waste time learning it,

Speech to text programs generate some interesting typos, I hope I caught them all.

JJ,

Let him stew in it; it isn't worth the argument. Sounds to me he's sort of
afeered that the new FCC offensive might
mess up his playhouse. He spends so much time trying
to insult people (doesn't work), it sounds like he is actually worried they
might get some of them thar dri'vahs
thar SQUEAK!!

Amazing how small people can try so hard to belittle others without knowing
a damn thing about them. I've got more hobbies than he's got hemorhoids (he
must have
a "pile" {pun intended}of 'em based on his feeble attempts to garner
attention. I'll have to tell you my ride in a North American T-6 Texan
sometime. Now There's a
hobby! LOL!

You might be right about needing a 100W rig to drive most linears, but not about the 6146s. A pair of 6146 tubes will deliver 280W upto 30 MHz and half that upto 60MHz acoording to the spec. The old Yaesu FTDX-560 was rated at 280W out with a pair off 6146s (560W input power, hence the model number).

> >

It's not the matter of being kind and courteous and moving over so someone
who's acting like an idiot can go by. It's the principle of the matter that
because of the way they are being self-important, it's going to be *them*
that does the moving around. I.E., I see them in kind of like the "bully"
role of a little kid. Well, I'm not giving in to the bully.

>

Regardless of who it is that is driving, I don't act like an idiot to them, around them, about them, or anything. I would pace myself at my comfort zone behind them--6, 7, or more carglengths, and cruise with them.

> >
> >Then they should have gotten out earlier than me.
>
> Why should *they* move to accomodate *you*? *You* won't accomodate them!
>

Yeah, I suppose...but my justification is that they can accommodate themselves, by moving around. A) We are both speeding; B) At the point this person is behind me wanting me to move over so he/she can get by, it's a given that it's because we're both around a driver(s) in the right lane that are going slower, right? So, what is it about the driver behind me...practically shoving their hood up under my vehicle...that would compel me to slow down, move over, reposition myself, when all they have to do is allow *both* of us to keep speeding, i.e., stay above a speed limit we don't want to drive, and wait the bit of time it will take to get passed the "slower" traffic?

> >It's the same principle

>
> >Hey, next time, get there before me.
>
> Different situation and principle.
>

I think the priniciple is the same. The root of my angst toward the driver we are speaking of, is their attitude. The attitude that has them convinced that they need to speed faster than someone else. Or that where they are going is far more important than where I am going (when neither of us has that information available to us).

> >
> >In my case, my 70-75 mph (more near 70 most of the time) is probably more

> ?? "Where your foot lands"?
>
> Two words: Cruise control.
>

Yeah. I thought when I got my truck with that on it, that I would always be using it. I don't like it...don't know where to put my foot that I can still have the same tactile feel with the brake pedal and gas pedal in alignment with my placement of the foot. I don't feel "safe" with cruise control engaged--plus the speeds of drivers is so erradic that one must keep disengaging and reengaging it anyway. Never fails...set it to the flow of traffic and 5-6 miles down the road, set it again.

Once when I was speeding. And, by all rights that cop should have nailed me. It was 11:30 at night, and my registration sticker (of which the new one was at home) was out, inspection sticker was out--which I'd not paid any attention to, *and* I couldn't find my insurance card. But, he let me go! WOW!

>

Uh, I have a problem with cops in general. Most I've encountered are not friendly. However, most I've encountered in a casual setting are great guys/gals. I don't like the military form of communication--stern, expressionless, etc., and it puts me on edge.

> >

>

Same as the non police (grin) scenario you gave me. I'd pace myself and cruise. I also don't care or get all upset about traffic jams. I look at them as an example to notice the birds flying around, look up under the bridges to see if there's a poor homeless person up under there, look at all the beauty I usually don't get to pay a whole lot of attention to--in fact the traffic jam gives me the opportunity to find some sense of pleasantry in places that really do require "closer inspection" to find it...(grin)

You're mistaken, Alun. A single 6146B is rated at 61 watts output in
AB1. So a pair would be at the 120w level.

> The old Yaesu FTDX-560 was
> rated at 280W out with a pair off 6146s (560W input power, hence the model
> number).

You're half right. The FT-DX560 was rated at 560w PEP input power but
it used television sweep tubes.

Check the ratings. You'll find that I'm right. Sorry, Alun, but I checked my
info before posting and it's accurate.

>A pair of 6146 tubes will deliver 280W upto 30 MHz and
>half that upto 60MHz acoording to the spec.

The 6146 is rugged, but not that rugged.

The maximum rated power output of a pair of 6146s in Class AB2 *audio* service
is 131 watts. Typical Class AB1 RF service will deliver less.

6146Bs can deliver a bit more. But even at maximum ratings, a pair of 6146Bs is
only rated at 240 watts *input* (Class C).

>The old Yaesu FTDX-560 was
>rated at 280W out with a pair off 6146s (560W input power, hence the model
>number).

560 W input is more than three times the maximum rated input power for 6146s
and more than twice the rated input power for 6146Bs.
>
The FTDX-560/570 (570 was a deluxe model rated 10 W more) and the earlier
FTDX400 did not use 6146s or any member of the 6146 family.

Those old Yaesus all used 6KD6 sweep tubes, as did the FL-2000 amplifier. (The
FL-2000 was based on a QST article of about 1968 in which up to six 6KD6s were
used in a low-cost amplifier).

But don't take my word for it. NJ7P has a neat tube database, and there are web
pages devoted to early Yaesus.

Cross-posted to: rec.radio.amateur.homebrew,rec.antiques.radio+phono,rec.radio.amateur.policy,rec.radio.shortwave,rec.radio.amateur.boatanchors,rec.radio.amateur.digital.misc

We have been running a community receiver for the
136KHz band for a couple of years in the UK.

A number of amateurs had trouble with noise on the
band (TV, a data ciruit into a hospital and a
mobile phone base-station with faulty SM PSUs just
to name three).

We have a receiver located in a quite part of Crawley
(at our radio club station), and this relays the
whole of the 136Khz band on 2m (135.4KHz = 144.9854MHz)

This is done with an FT-847 running in satellite
mode with the two IFs linked together. We get
quite good coverage over the SE, and good dynamic range.
We are proposing as an experiment to try relaying
a 6KHz segment of the CW segment of 40m band for a
few weeks to get a better feel on the dynamic range
issues.

The system is MB7LF and is licienced as a data
system.

Well...we can add THESE three messages to the numerous other
times you've done the same thing.

Last time it was some phantom friend's software that caused the
glitch.

Must be kinda embarrassing for a "professional" electronics
"engineer" such as yourself, eh Lennie...???

Yep. One can look at the AH0A site for monthly numbers as well.

FCC and the various VECs got pretty backlogged around then, too. Some
folks didn't see actual database changes for a few weeks.
>
> PS, I don't have the numbers myself, but as you mentioned, they would miss
> the backlog of activity before April 15th.

Yup. I know a bunch of hams who strove to upgrade *before* April 15, for various reasons (such as getting an Advanced before they were gone forever).

--

What I find interesting is how *little* the numbers have changed in almost 4 years. For example, at the end of March, 2000, there were a little over 103,000 Advanceds. Now there's something over 80,000, even though the 20 wpm code test is gone. In similar fashion, look how many Tech Pluses still exist despite the fact that they need never take another code test, and that many of them already have credit for the General written as well. And FCC has been renewing Tech Plus as Tech since April 15, 2000, too.

IOW, perhaps the code test wasn't the "barrier" it was proclaimed to be.

I think it all comes down to complaints, too.

> Modern equipment rarely causes problems (like
> excessive
> splatter or harmonics). I'm talking about stuff from the major
> manufacturers
> (Yeacomwood), not the "freeband" "linayes".

That's very true.

And it raises the question of "why should hams have to know all sorts
of theory stuff when the original reason for that knowledge is largely
gone"

(similar to the above anticodetest argument - and just as incomplete).

> And who hasn't, by mistake, operate the wrong mode in some subband?

Me. I've *never* done that. Not by mistake, not intentionally either.

> Like
> answering a foreign phone CQ on 7140?

Not even once.

> Oops... Most people will not make
> a habit of doing that, but once or twice over the years.

Mistakes happen. But when you read the FCC enforcement letters, it
becomes clear that mistakes, particularly technical ones, aren't

really much of a problem anymore in the ARS.

> The FCC realizes that
> errors do happen, and that most people will realize the error and
> correct it themselves
> without the FCC having to do anything about it.

That's why we have OOs. The OO program was instituted so that hams
would find out about such problem from each other rather than FCC.

> So what's the problem?

It's more of a problem than having a maximum of 100 watts, which just happens to be what is the standard now.

I've gone over what I think are possible problems, such as the likelihood of a ham to simply crank up the power if he or she is having trouble getting through, or simply wanting to.

It's the apparent lack of Technicians being harmed by their allowed power levels.

It's that the newly licensed class A will find their rig won't drive a number of linear amps to full power.

I think that the rationale behind the lower limit, based on some rf safety report, is not correct. If RF safety is important, and it is, Then that should be the first thing taught to the prospective amateur.

I think that no amateur should be allowed to "mash that PTT" button unless the testing authority is pretty darn sure that they are educated enough that they can safely operate a 100 watt station.

I think that people can find creative ways to harm themselves.

I think allowing them 50 watts output without proper RF safety
instruction is irresponsible.

I think that once you have enough RF safety savvy to operate 50 watts,
you have enough RF safety savvy to run 100 watts.

I think all these things argue toward testing more for RF safety, and
since the new amateur would then have some knowledge of RF safety, the
new amateur would be qualified to run 100 watts, which just happens to
be the level that most HF rigs are already putting out.

I think you disagree.

>> No argument with any of your points, Jim. But that isn't today. Today

And My opinion is that eliminating *those* questions is
counterproductive and not the most responsible thing to do. And you
already know what I think about simplifying the tests.

> The hazards of RF exposure, even at relatively low levels, are better
> understood now than before. But there is still a lot of work to be done.
> Meanwhile, it makes sense to reduce exposure when possible.

And this ties right into the part of my last post that you snipped.
Maybe in the interests of RF safety, and among people who think that it
makes sense to reduce exposure, it might seem like a good idea to limit
all hams maximum power. Let that dog sleep!

The idea is no more outlandish than the idea that the tests could be
getting simplified bit by bit to the point of giving up on testing
altogether.

sooooo...

People could be trotted out to expound on their QRP exploits around the
world. The success of 60 meters and it's lowered power limits are
another arguing point. I can hear it now: "After seeing the successful
operation of Amateur Radio operators under these circumstances, and the
general safety problems which Amateurs concede is a problem, it is only
prudent, sensible and reasonable to reduce transmitter power to 50 Watts
or perhaps less. This is in line with published tests dealing with RF
Safety. Coupled with these lowered and safer power limits, we can now
eliminate the regulatory morass of Amateur Radio testing altogether, and
turn our Amateur spectrum into a service that can be accessed safely by
all Americans."

Oh frabjous day!

Technical mistakes were, and I would guess still are, handled by
less formal warnings (a phone call or an Advisory Notice rather than
a Notice of Violation or a Notice of Apparent Liability to
Forfeiture, for instance) at least the first time around.

Whatever works.....

That was a few years ago but it was a neat ride. Probably one of the things
that led me to fly in later
years (soloed at 21 in 1970). The Civil Air Patrol Wing had one, and one
day, they were giving rides to the cadets. Competition for riding in a T-6
was pretty high
because of time restraints of the pilot (s), but I stood hopefully in line
not figuring I would get the chance. Two
buddies in front of me were scared and began to talk themselves out of
flying. To my surprise, they stepped OUT of line and I was next!

Now my first airplane ride was in a Piper Cherokee 180
followed by a few sorties in a J-3/L-4. This didn't prepare me for what
happened next! When the pilot shoved the throttle in, I could feel the
tremendous torque
push me back in the seat! I wasn't used to such power--
and this was only an advanced trainer. Climbing out
amid the roar and clatter of that huge engine, we were at
3,000 feet in NO time--this was definitely not your Father's Oldsmobile, er
uh, Cessna!

The pilot asked me if I was OK and I said, "Sure". Next
thing I am looking up at the sky, I can't lift my hand off the armrest and
my jaws feel like they are being pulled down to my shoulders! I CAN'T move!
Up, up, up, clatter, clatter, clatter, we went thru an inside loop, and
SNAP! A snap roll to the left. I banged my head against
the canopy! Ouch! Then I am looking directly at the ground, then up, up up,
UP again as the airplane slowed,
slowed and WHAM! A stall! (no that's NOT when the
engine quits; it's when the airframe stops flying and begins
to free fall) Looking at the ground again. Three turns of
a spin as I am held upwards as if weightless. Then a hard, 60 degree turn
with my butt pushed ever harder down into the seat and my jaws are distended
with the
increasing G forces. Level flight as I get my breath utterly
fascinated, but panting and beginning to sweat. Then
the pilot tells me to get on the controls as he tells me, a
total greenhorn what the controls do, how to turn left, how to turn right,
what the rudder does, points out the
wing surfaces, the flaps, tells me about the ailerons, etc.
And this kid was in HEAVEN! If we had augered into
the ground, I wouldn't have cared because flying became
a MUST for me. It didn't make me sick, either. Rather, it
kindled a passion within that remains to this day. I let my
medical lapse some years ago when it became MORE than I could afford. When
fuel went beyond $1.50 gal (and that has been some years ago, I just
couldn't justify
the expense to remain current. But during the years I DID fly, I had a
ball. Cessnas, Bonanzas, Pipers, DC-3
(that was fun, too!) There was a friend that ran a radio shop in the
field--certified avionics. Sometimes, he would
come to me and ask me to go up and fly while he made
critical adjustments to the radios/navcomms. I never actually got my
multi-engine ticket, but I would fly with
Jimmy while he did his thing. Lots of "free" flying back then!

Take that flight, you won't regret it! And incidently, there
is a big celebration at Kitty Hawk, NC to mark the 100th
anniversary of the Wright Bros flight in 1903. I wouldn't
miss that for anything.

Jerry

Before the

Federal Communications Commission

Washington, D.C. 20554

In the Matter of)

)

William A. Woods) File No. EB-02-ST-244

Tacoma, Washington) NAL/Acct. No. 200332980003

) FRN 0007-9944-78

)

FORFEITURE ORDER

Adopted: September 15, 2003 Released: September 17, 2003

By the Chief, Enforcement Bureau:

I. INTRODUCTION

In this Forfeiture Order ("Order"), we issue a monetary forfeiture in the amount of five hundred dollars ($500) to William A. Woods, Tacoma, Washington, for willful violation of Section 303(n) of the Communications Act of 1934, as amended, ("Act") and Section 95.426 of the Commission's Rules ("Rules"). The noted violations involve Mr. Woods' failure to make his CB radio station available for inspection at the request of authorized Commission personnel.

On December 30, 2002, the Commission's Seattle, Washington, Field Office ("Seattle Office") issued a Notice of Apparent Liability for Forfeiture ("NAL") to Mr. Woods for a forfeiture in the amount of seven thousand dollars ($7,000). Mr. Woods responded to the NAL on February 10, 2003.

II. BACKGROUND

On September 3, 2002, the Seattle Office received a report from the City of Tacoma, Washington, concerning complaints about interference to home entertainment equipment in the 3000 block of South Madison Street in Tacoma,

Washington.

On October 29, 2002, FCC agents from the Seattle Office, using mobile direction finding equipment, determined that an interfering signal on CB frequency 27.025 MHz was emanating from the residence of William A. Woods at 3005 S. Madison Street, Tacoma, Washington. The agents observed signal strength levels significantly higher than those expected from an authorized CB transmitter.

On November 5, 2002, the agents again observed transmissions on 27.025 MHz with signal strength levels significantly exceeding those expected from an authorized CB transmitter. Using mobile direction finding equipment, they again determined that the transmissions emanated from Woods' residence. After locating the source of the transmissions on November 5, 2002, the agents, who were accompanied by two police officers, requested that Mr. Woods make his CB station available for inspection. After a delay, Mr. Woods allowed the agents but not the police officers to enter his residence. Once the agents began an inspection of Mr. Woods' CB station, Mr. Woods changed his mind and refused to allow the inspection to continue. The agents then informed Mr. Woods that his refusal to allow an inspection could result in a monetary forfeiture.

On December 30, 2002, the Seattle Office issued a NAL for a $7,000 forfeiture to William A. Woods for refusing to allow an inspection of his CB radio station, in willful violation of Section 303(n) of the Act and Section 95.426 of the Rules. In his response to the NAL, Mr. Woods claims that the agents who came to his residence on November 5, 2002, did not present any identification and that he did not refuse to allow the agents to inspect his station. In addition, Mr. Woods submitted financial documentation concerning his inability to pay the proposed monetary forfeiture and also stated that he had taken medication before the agents arrived at his house.

DISCUSSION

The proposed forfeiture amount in this case was assessed in accordance with Section 503(b) of the Act, Section 1.80 of the Rules, and The Commission's Forfeiture Policy Statement and Amendment of Section 1.80 of the Rules to Incorporate the Forfeiture Guidelines, 12 FCC Rcd 17087 (1997), recon. denied, 15 FCC Rcd 303 (1999) ("Policy Statement"). In examining Mr. Woods' response, Section 503(b) of the Act requires that the Commission take into account the nature, circumstances, extent and gravity of the violation and, with respect to the violator, the degree of culpability, any history of prior offenses, ability to pay, and other such matters as justice may require.

Section 303(n) of the Act authorizes the Commission to inspect radio stations and Section 95.426 of the Rules requires CB operators to make their stations available for inspection upon the request of Commission personnel. The agents who attempted to inspect Mr. Woods' station flatly contradict his claims that they did not present any identification and that Mr. Woods did not refuse to allow the inspection. The agents state that they presented identification indicating that they are FCC agents and that, after allowing

the inspection to begin, Mr. Woods became extremely agitated and then told the agents that they could not continue with the inspection. We conclude that Mr. Woods violated Sections 303(n) of the Act and 95.426 of the Rules by refusing to make his CB radio station available for inspection. We also conclude these violations were "willful" within the meaning of Section 503(b) of the Act.

Mr. Woods claims to have taken the medication "Olanzapine" before the arrival of FCC agents at his house on May 8, 2002. Mr. Woods does not contend that this medication contributed to his refusal to permit an inspection; indeed, he flatly denies refusing to permit an inspection. Furthermore, it is unclear from the information provided whether this medication would have any affect on Mr. Woods' actions or state of mind.

Upon review of the financial documentation presented by Mr. Woods, we conclude that the forfeiture amount should be reduced to $500 on the basis of financial hardship.

Mr. Woods presented several additional arguments in his response to the NAL, such as his claim that he did not operate his station on October 29, 2002, and his attempts to discredit the complainants. These additional arguments have no bearing upon the matters at issue in this proceeding: whether Mr. Woods failed to allow a station inspection, in violation of Section 303(n) of the Act and Section 95.426 of the Rules; whether a forfeiture should be imposed for those violations; and the amount of any such forfeiture. Accordingly, we find that these additional arguments are not material to this proceeding and we will not consider them.

We have examined the response to the NAL pursuant to the statutory factors above, and in conjunction with the Policy Statement as well. As a result of our review, we conclude that Mr. Woods willfully violated Section 303(n) of the Act and Section 95.426 of the Rules and we find that, while there is no basis for cancellation of the proposed monetary forfeiture, a reduction to $500 is warranted on the basis of financial hardship.

IV. ORDERING CLAUSES

Accordingly, IT IS ORDERED that, pursuant to Section 503 of the Act, and Sections 0.111, 0.311 and 1.80(f)(4) of the Rules, William A. Woods IS LIABLE FOR A MONETARY FORFEITURE in the amount of five hundred dollars ($500) for willful violation of Section 303(n) of the Act and Section 95.426 of the Rules.

Payment of the forfeiture shall be made in the manner provided for in Section 1.80 of the Rules within 30 days of the release of this Order. If the forfeiture is not paid within the period specified, the case may be referred to the Department of Justice for collection pursuant to Section 504(a) of the Act. Payment may be made by mailing a check or similar instrument, payable to the order of the Federal Communications Commission, to the Federal Communications Commission, P.O. Box 73482, Chicago, Illinois 60673-7482. The payment should reference NAL/Acct. No. 200332980003 and FRN 0007-9944-78. Requests for full payment under an installment plan should be

sent to: Chief, Revenue and Receivables Operations Group, 445 12th Street, S.W., Washington, D.C. 20554.

IT IS FURTHER ORDERED that a copy of this Order shall be sent by first class mail and certified mail, return receipt requested, to William. A. Woods, 3005 S. Madison Street, Tacoma, Washington 98409.

Lancaster, Ohio) NAL/Acct. No. 200232360008

) FRN 0007-4207-22

)

FORFEITURE ORDER

Adopted: August 12, 2003 Released: August 14, 2003

By the Chief, Enforcement Bureau:

I. INTRODUCTION

In this Forfeiture Order ("Order"), we issue a monetary forfeiture in the amount of five hundred dollars ($500) to Frank Kluz, Lancaster, Ohio, for willful violation of Section 95.411 of the Commission's Rules ("Rules"). The noted violation involves Mr. Kluz's use of an external radio frequency power amplifier ("linear amplifier") as part of his Citizens Band ("CB") radio station.

On July 23, 2002, the Commission's Detroit, Michigan Field Office ("Detroit Office") issued a Notice of Apparent Liability for Forfeiture ("NAL") to Mr. Kluz in the amount of five thousand dollars ($5,000). A letter responding to the NAL was filed on Mr. Kluz's behalf on October 3, 2002.

II. BACKGROUND

On June 22, 2001, the City of Lancaster, Ohio, Office of the Law Director and City Prosecutor Office, sent a complaint letter to the Detroit Office. The complaint alleged that a CB radio station operated by Mr. Kluz was causing interference to home electronics equipment, such as televisions,

radios and telephones, in his neighborhood.

On July 19, 2001, the Detroit Office sent a Quiet Hours letter to Mr. Kluz directing him, his family, and any guests visiting him, not to operate any base or mobile radio transmitter from his property or adjacent roadways from the time the letter was received until he contacted the Detroit Office to make arrangements for an inspection of his CB radio facility.

On August 1, 2001, Mr. Kluz sent a response to the Detroit Office. In this response, Mr. Kluz indicated that he would comply with the order not to operate his CB radio station, but did not make arrangements for an inspection of his CB station.

On October 16, 2001, the City of Lancaster, Ohio, Office of the Law Director and City Prosecutor Office, sent a second complaint letter to the Detroit Office. The complaint alleged that Mr. Kluz's CB radio transmissions continued to cause interference to neighborhood televisions, radios and telephones, thereby violating the Quiet Hours letter.

On October 31, 2001, an agent from the Detroit Office traveled to Lancaster, Ohio and monitored for transmissions from Mr. Kluz's CB station, but did not observe any transmissions from his station at that time. The agent went to 245 Talmadge Avenue, Lancaster, Ohio, the address stated in the complaints as Mr. Kluz's residence. The agent inspected Mr. Kluz's CB station and found it to be in compliance with applicable FCC rules and regulations. Accordingly, on November 14, 2001, the Detroit Office sent a letter to Mr. Kluz releasing him from the conditions that had been imposed on his operation of the CB station by the Quiet Hours letter.

On January 21, 2002, the Office of Congressman David L. Hobson referred a complaint to the Detroit Office from his constituents regarding interference to telephones and home electronic equipment allegedly caused by Mr. Kluz's CB radio station.

On June 10, 2002, the Detroit Office received a complaint from a resident in Lancaster, Ohio. The complaint alleged that Mr. Kluz's CB radio station was causing interference to neighborhood home electronics equipment.

On June 25, 2002, agents from the Detroit Office traveled to Lancaster, Ohio and monitored CB transmissions using a mobile direction finding vehicle. The agents detected CB transmissions on 27.185 MHz (CB Channel 19) and, at approximately 8:26 p.m., positively identified the source of the transmissions to be a residence at 245 Talmadge Avenue. The agents then proceeded to the residence at 245 Talmadge Avenue, interviewed Mr. Kluz, and inspected his CB radio station. The agents observed a Palomar TX-200B linear amplifier attached to Mr. Kluz's CB transceiver. Mr. Kluz told the agents that he had obtained the linear amplifier from a friend two days earlier and was checking it out for his friend. Measurements taken by the agents indicated that the linear amplifier had an output power that ranged from 12.5 watts to 75 watts, which exceeds the permissible power limits specified in Section 95.410 of the Rules.

On July 23, 2002, the Detroit Office issued a NAL for a $5,000 forfeiture to Mr. Kluz for using a linear amplifier as part of his CB radio station in willful violation of Section 95.411 of the Rules. Mr. Kluz did not respond to the NAL. However, on October 3, 2002, the Commission received a letter from Dr. James LeSar, M.D., responding to the NAL on behalf of Mr. Kluz. In this letter, Dr. LeSar asserts that due to the nature of his medical problems, Mr. Kluz is unable to understand and unable to willfully violate Section 95.411 by having a linear amplifier attached to his CB station. According to Dr. LeSar, Mr. Kluz suffers from several medical conditions, including dementia and a possible brain tumor, and has poor reading comprehension. Dr. LeSar's letter indicates that he did not personally examine Mr. Kluz. Dr. LeSar wrote that he was including documentation to demonstrate to the Enforcement Bureau that Mr. Kluz was unable to willfully violate Section 95.411; however, no documentation was included.

On June 17, 2003, the Enforcement Bureau sent a letter to Dr. LeSar requesting the referenced documentation. We received Dr. LeSar's response to our letter on June 30, 2003.

Accompanying Dr. LeSar's response was an evaluation of Mr. Kluz taken by Dr. Marc Miller for the Bureau of Disability Determination, on February 6, 2002. In the evaluation, Dr. Miller concluded that Mr. Kluz suffers from depression, cognitive difficulties, dementia, and memory problems. The evaluation further indicated that Mr. Kluz had a driver's license, drove to the evaluation appointment, and is able to manage his own funds. The evaluation did not state that Mr. Kluz was unable to willfully violate Section 95.411, or that Mr. Kluz was unable to know the actions he takes.

DISCUSSION

The proposed forfeiture amount in this case was assessed in accordance with Section 503(b) of the Communications Act of 1934, as amended, ("Act"), Section 1.80 of the Rules, and The Commission's Forfeiture Policy Statement and Amendment of Section 1.80 of the Rules to Incorporate the Forfeiture Guidelines, 12 FCC Rcd 17087 (1997), recon. denied, 15 FCC Rcd 303 (1999) ("Policy Statement"). In examining Mr. Kluz's response, Section 503(b) of the Act requires that the Commission take into account the nature, circumstances, extent and gravity of the violation and, with respect to the violator, the degree of culpability, any history of prior offenses, ability to pay, and other such matters as justice may require.

Section 95.411 of the Rules prohibits attaching a power amplifier to a CB transmitter in any way. Furthermore, under Section 95.411(c) of the Rules, there is a presumption that a linear or other external RF power amplifier has been used if it is found in the possession of, or on the premises of, the CB radio station operator and there is other evidence that the CB station was operated with more power than allowed by the rules. On June 25, 2002, FCC agents positively identified Mr. Kluz's CB station as the source of CB transmissions on 27.185 MHz (CB Channel 19) and immediately thereafter inspected his CB station. This inspection revealed that the station consisted of a CB transceiver with an attached linear amplifier and power indicator meter. Mr. Kluz acknowledged at the time of the inspection that he had been operating the CB station with the attached linear amplifier.

Accordingly, we conclude that Mr. Kluz violated Section 95.411 of the Rules by operating a CB radio station with a linear amplifier.

We also conclude that this violation was willful within the meaning of Section 503(b) of the Act. The term "willful," as used in Section 503(b) of the Act, does not require a finding that the rule violation was intentional or that the violator was aware that it was committing a rule violation. Rather, the term "willful" simply requires that the violator knew it was taking the action in question, irrespective of any intent to violate the Commission's rules. Dr. LeSar asserts in his letter that Mr. Kluz is unable to understand and unable to willfully violate Section 95.411 because he suffers from several medical conditions, including dementia and a possible brain tumor, and has poor reading comprehension. Dr. LeSar does not indicate, however, that Mr. Kluz was ever examined or questioned specifically to determine whether he understands what a linear amplifier is or how to turn it on. Moreover, based on correspondence from Mr. Kluz to the Detroit Office and the agents' interview of Mr. Kluz, at the time of the inspection, Mr. Kluz clearly knew that he had hooked up a linear amplifier to his CB radio station because he admitted to the agents that he was checking it out for a friend. Finally, we determine that the information provided by Dr. LeSar and Dr. Miller concerning Mr. Kluz's inability to act willfully is not sufficient to overcome our conclusion that Mr. Kluz knew he was using a linear amplifier. Specifically the psychological evaluation does not state that Mr. Kluz is unable to know the actions he takes, and therefore the evaluation does not refute Mr. Kluz's own statement that he was operating a linear amplifier. Accordingly, based on the evidence in the record, we find that Mr. Kluz willfully violated Section 95.411 of the Rules.

We have examined Mr. Kluz's information, relating to his ability to pay, and determined that the proposed $5,000 forfeiture would impose a financial hardship on Mr. Kluz. Therefore, we will reduce the forfeiture amount from $5,000 to $500.

Finally, we note that we have not received any recent complaints concerning Mr. Kluz's use of a linear amplifier. However, if we receive further complaints stemming from Mr. Kluz's improper use of a linear amplifier, we will take appropriate additional enforcement action.

IV. ORDERING CLAUSES

Accordingly, IT IS ORDERED that, pursuant to Section 503 of the Act, and Sections 0.111, 0.311 and 1.80(f)(4) of the Rules, Frank Kluz IS LIABLE FOR A MONETARY FORFEITURE in the amount of five hundred dollars ($500) for willful violation of Section 95.411 of the Rules.

Payment of the forfeiture shall be made in the manner provided for in Section 1.80 of the Rules within 30 days of the release of this Order. If the forfeiture is not paid within the period specified, the case may be referred to the Department of Justice for collection pursuant to Section 504(a) of the Act. Payment may be made by mailing a check or similar instrument, payable to the order of the Federal Communications Commission,

to the Federal Communications Commission, P.O. Box 73482, Chicago, Illinois 60673-7482. The payment should reference NAL/Acct. No. 200232360008 and FRN 0007-4207-22. Requests for full payment under an installment plan should be sent to: Chief, Revenue and Receivables Operations Group, 445 12th Street, S.W., Washington, D.C. 20554.

IT IS FURTHER ORDERED that a copy of this Order shall be sent by first class mail and certified mail, return receipt requested, to Frank Kluz, 245 Talmadge Avenue, Lancaster, Ohio 43130.

Strange where do you come up with this "fact" that most adults are familiar with the code. The Boy Scouts that I knew did not except for one or two individuals who went for a merit badge. In the military, only those who went for radio might have had any introduction to it and not all of those. My neighborhood friends when I was a kid did not play around with sending Morse code with flashlights.

Of the adults that I have talked to, only those in ham radio had any familiarity with Morse code.

So please cite the statistical data that shows people have had enough exposure to Morse code to be able to evaluate it even though they don't know it.

In addition, anyone one who thinks they took the code tests to get phone subbands isn't really viewing it from the right perspective anyway. The code test, as well as the additional writtens, was to get HF privileges or should have been. It happens that phone privileges are included when one earns HF privileges.

Going with letter designations don't get around perceptions. Class "A"
would be perceived as "better" than "Class B" so what's the point in
renaming the classes.

Extra simply means that they did "extra" testing and have "extra"
privileges. Seems pretty simple to me.

Well, the FCC allows us to build and modify equipment for use on the ham bands, and
it would be a good idea if we know what we are doing. At least be able to recognize
things like wrong frequency (like out of band), severe harmonics, splatter, TVI, and
such. Cell phone users don't have licenses, but they're not allowed to modify their
equipment either. Same for CBers. A CBer isn't supposed to modify his radio to
operate on 10m, but a ham could. It becomes a "ham radio set" and no longer a "CB set".
If and when the FCC says "no homebrewing or modifying, off the shelf 'type accepted'
rigs only, then the theory requirement gets weaker. I doubt the FCC would ever do
that, as one of our reasons for existing is to encourage learning about radio and
electronics.

Those who can hold it together under stress come in two types: a - nerves
of steel (only a few of those around) OR b - they've done it so long that
it's no more stressful than talking (probably the more common reason).

I endured the study of and took the test for CW *just* for the phone
privleges on 10M, specifically to join in on a nightly ragchew with a whole
bunch of local folks--which is no longer going on but it was neat while it
did. That is the *only* reason I did anything involving CW. So, you can
word it any way you want, Dee, but what compels one person to work with CW
at all, may not be what compels someone else.

Just like a welfare cber. Has plenty of welfare money to buy lots of crappy cb radios and those big lenyars to splatter all over the rf spectrum and cause havoc, but dosen't have enough money to pay up when caught. They should make him sell all that crappy equipment and the trailer house he lives in to apply to the original fine.

Ever notice how all these cb clowns who get caught have some kind of
medical problem? Must be something in them cb radio waves that effects
these morons. His medical problem evidently did not keep him from
assembling an illegal station and operating in violation of the FCC
rules. What a crock!!!

Try it after getting up at 3am to drive 5 hrs to the nearest FCC office
and set there in front of an FCC examiner. I managed it OK but the other
guy going for General was so nervous that when he was asked to send he
could only get out a string of meaningless dots and dashes. The exam
officer told him to go get a cup of coffee while he had me do my sending
test then come back and try again. He did make it, but just under the wire.

I still think there is a fundamental problem I have with Morse code - although I have come a long way, the effort I have to put in compared to what others apparently have to do is nothing short of phenomenal. A half hour at lunch, another half hour to an hour in the evening, 6 days a week, and I am still struggling. I know I am nowhere near stupid, and I've tried enough different methods to know that there is something somewhere that makes my brain process sounds a bit differently than those that find Morse easy.

But in most matters, I am one of those steely nerved types, and consider myself too dumb to panic.

But, I persevere! I'm starting to catch whole words on the air (at faster speeds) now, and it is exciting, despite my whining about it!

They recently did just that, and as a result the rules now include 97.13(c) which require YOU to perform an environmental evaluation of your station if you intend to use QRO, and certify that evaluation on your renewal application. The "can of worms" is open.

I don't think so, Hans. You're advocating a test "similar in difficulty" to the Extra. However, an Extra hasn't just taken that one test - he also took the Tech and General prior to that. The material on each test is different, with later tests building on the material in the earlier tests. To cover the same material an Extra has covered today ("similar difficulty"), your new test would have to include the material covered in all three current tests (with over 120 questions in one sitting). So, are you advocating that, advocating some type of reduced content test (less questions), or did you simply forget the material on the first two tests?

Sure.

Just like how the FCC allows us to send and receive Morse code on the ham
bands, and it would be a good idea if we know what we are doing.

Neither the use of Morse code nor the construction/modification of equipment is
mandatory. Many hams enjoy amateur radio without doing either.

>At least be able to recognize
>things like wrong frequency (like out of band), severe harmonics,
>splatter, TVI, and such.

Sure.

Just like being at least be able to recognize most of the 43 symbols of the
Morse Code when sent at the very slow speed of 5 wpm.

>Cell phone users don't have licenses, but they're not allowed to

Usually such modifications require the high level of technical skill required
to cut the blue wire or crush diode D17....

And such modifications are not mandatory at all. Most hams today use certified
equipment, do they not?

Which is more common on the amateur HF bands: hams using homebrew/seriously
modified equipment, or hams using Morse code?

Do you really think the written exams adequately test whether a ham can build or modify amateur radio equipment - particularly considering the wide range of bands, modes and technologies usable by hams?

>I doubt the FCC
>would ever do

Well said, Dwight. Everything is built on what went before it. So now what sounded kind of easy is not so easy. Someone here, perhaps Jim, pointed out how the Extra license tests did not address RF safety much if at all. But wait! the Class B tests are apparently not going to address RF safety either because the power is limited to a "safe" amount. So now safety related learning is confined to the second test for class A.

Dat's gonna be one big test!

Perhaps it was an unbalanced comparison, Dan, but there's several
things that rub me the wrong way.

The first is that the State of Israel was formed, for the most
part, by people who we not born there. They came, they saw, they took
what they wanted and the natives were just "S.O.L.". Yes...I know
this is the same way the US evolved, but it still doesn't make it
right.

Secondly, the State of Israel is no stranger to spreading a bit
of terror around itself. If you doubt me, do a bit of research on the
Likud Party and one of it's more famous members, Menachim Begin.
Before he got himself elected Prime Minister and invited to break
bread at Camp David, ole Menachim took some special pleasure in
dispatching Palestinians and British alike. Some of the "tactics" you
may recognize as those that the State of Isreal currently cries foul
over now...

Lastly, the Israelis, in my opinion anyway, still have a lot of
explaining to do for the way they do business with their "friends",
specifically us and the USS Liberty affair. Thier "misidentification"
story still doesn't wash.

My point is this...there's a circle of violence that is occuring
in the Middle East...it's been going on since prehistoric times and
will probably continue until the sun goes nova, so we ought to cut our
losses and leave them to thier lifestyle. They'd not know how to act
any other way.

Our only valid interest in that region is maintaining the
petroleum flow and free navigation via the Suez Canal. If geological
studies are correct, Russia has petroleum reserves that exceed

anything the Arabs have, so I think rather than sending arms to Israel and money to the Arabs, we should be investing our engineering resources farther north. The Arabs would go broke which would relegate them back to bedouin tents in a generation. No money means no guns, and the Israelis would no longer need OUR weapons.

Of course that would tick off the Germans who'd be selling a lot fewer Mercedes and Audis, but they'd make up the slack on the back end selling them in Moscow ! ! !

I expect it would be a longer test than todays Extra, but probably not 120 questions (since some things, like band segments for example, would be the same as for the learner-permit level), and perhaps not necessarily in one sitting -- could be structured to be taken in 2 (or 3?) sessions for those who are intimidated by lengthy exams or have weak bladders.

My Extra exam was 100 questions. You were allowed 3.5 hours to complete it.

Exactly!

And consider this:

I know hams who "endured" the study and *written* tests for the
Technician, General, Advanced and Extra, because they wanted the
CW/data privileges. (Code test was no problem for them).

Hans' proposal would cause all new hams to "endure" the study for and
taking of a written test just to *keep* an amateur license beyond 10
years.

Your right, what you say don't make it right. However what really happened
was the UN, by RESOLUTION created the state of Israel. It was carved out
of Palestine which was being vacated by the British. This was about 1947.
Of course the fine ragheads were trying to kill all the Jews before that
happened.
Remember our fine friends over there now...the Jordanians? They were
marching on the Jews as the Brits left. And if the truth be known the
reason Jordan had the butt is they wanted to be in charge of the Jews, i.e.
part of the Kingdom of Jordan. And really didn't want the palestinians
anyway. Just like today. Except they don't want to be in charge, they
just hope the Jews don't get the arse and come over and kick theirs. Ah
how times have changed.

Amateur Radio Newsline(tm) Report 1373 - December 5, 2003

Closed Circuit Advisory

This is a closed-circuit advisory, and is not for re-transmission. Repeat, not for broadcast.

This is Andy Jarema, N6TCQ, Newsline Support Fund Administrator. As we move into the holiday season, we ask that you include Newsline on your list of giving. This is the first request we've made since April, and we'll be back in the following weeks to thank everyone that helped in that campaign. But with support in the months since that campaign only averaging between $200 and $250, and with our normal monthly expenses of between $600 and $800 each month to bring you the latest news on Amateur Radio, you can see where the math is headed.

The address for the Newsline Support Fund is Newsline, PO Box 660937, Arcadia, CA 91066. If you missed that, it will be given again at the end of today's newscast. And now the latest news:

**

Amateur Radio Newsline report number 1373 with a release date of Friday, December 5, 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. Hams in space fail to show up for a highly publicized operating event while hams on the ground save a life. Find out the details on Amateur Radio Newsline report number 1373 coming your way right now.

(Billboard Cart Here)

**

ON THE AIR: ISS ASTRO-HAMS A NO-SHOW FOR K6DUE COMMEMORATIVE EVENT.

What if you planned a party but your host never showed up to open the door and turn on the music. This is essentially what happened to the ARISS folks the weekend of November 29th and 30th in regard to the kickoff of its NA1SS special event tribute to the life of Roy Neal, K6DUE. But it was not completely unexpected. Amateur Radio Newsline's Norm Seeley, KI7UP, has the rest of the story:

The event was to get underway on Saturday, November 29th during as the space station passed over the US West Coast. ARISS International Chairman Frank Bauer, KA3HDO, says that Expedition 8 Commander Mike

Foale, KB5UAC, had even been supplied with a list of potentially good radio passes and the frequencies where to call the I-S-S had been published world wide a few weeks ago. Stations on the ground were even asked to keep their Q-S-O's as brief as possible so that the greatest number of hams possible could make contact with the space travelers.

And so it was that hams world wide were ready to honor K6DUE by making contact with the station in space that his years of effort helped to create. But over the entire weekend there were no reports of voice contacts with either Foale or his crewmate Alex Kaleri, U8MIR. Nor was the RS0ISS automated packet robot station activated either.

Why the crew was a no-show remains a mystery. Frank Bauer is certain that Foale knew about the event. In fact a message was received from KB5UAC that said he would try to be on the air for about 2 passes each weekend of December for the event. Bauer also received confirmation that final information regarding this past weekend was uplinked to the ISS crew on Friday, November 28th.

Bauer says that ARISS has discussed the situation with NASA. He says that there are two events that could have kept Foale from getting on the air. The first revolves around a broken exercise treadmill that KB5UAC reportedly spent a lot of his own time fixing this past weekend. The other is the widely reported crushing noise heard by the crew last week. It was in the aft end of the Service Module and its possible that the crew might have gotten instructions from the Russian team to determine the cause. This is being checked out.

Either way, Bauer reminds everyone that last weekend was only the kickoff and that the event commemorating K6DUE's contributions to manned ham radio space operations and that the event continues through the end of the month. He also says that ARISS will alert the ham radio community of potential opportunities for contacts as they become available.

For the Amateur Radio Newsline, Norm Seeley, KI7UP, in Scottsdale, Arizona for the Amateur Radio Newsline.

--

It should be noted that when it made the original announcement several weeks ago, ARISS said that crew participation in the event was completely contingent on the schedule of the on-orbit duties and other issues that might crop up on board the orbiting space station. (ARISS)

**

RESCUE RADIO: LA HAMS ASSIST CARDIAC VICTIM

Ham radio has helped to save the life of one of its own. This, as members of a Southern California repeater respond to a users call for assistance. Amateur Radio Newsline's Mert Garlick, N6AWE, has the details:

--
Almost every ham has heard of the Los Angeles 147.435 MHz repeater. Some call it notorious. Others have given it the nickname of "the animal farm" for the lack of discipline of its users. But on Sunday night, November 23rd, some of the tarnish turned to silver as bad manners gave way to human kindness and a life was saved.

--
Elmer: "We were all sitting around and listening to the radio as we usually do in an evening. All of the sudden, an individual keyed up a microphone whom we were all aware was having some health problems. One of our listeners, Alan Sanchez, KC6QXA, immediately noticed the distress in this persons vloice. He keyed up the mic and asked if he was OK. He indicated he was having some difficulty breathing and needed help. So, Alan immediately called Faith Gonzales who said to call 911 immediately because she was also very familiar with thisd gentlemans health problems
--

That's Gary Elmer is KG6DVO. He recently took over the system. And according to Elmer, the work of his users did not end there. While medical aid was in route, Mike Stavropoulos, KD6JTD, headed over to where the stricken ham lives. He helped him get up, opened the security gate for the paramedics and directed them to the apartment. Mike then followed the ambulance to the hospital and filled medics in on the hams condition.

Later that evening, the hospitalized ham went into cardiac arrest. He was revived by his doctors. Had he been at home the chances are that he would now be a silent key now. Gary Elmer says that he is very proud of his users:

--

Elmer: "You know we like to tear it up and cut up, and have a good time. And you know that some people might of the fun we have. And yes, we have been in trouble with the FCC, but you know, when called upon, we too can rise to the occasion as evidenced by the actions of those three amateurs the other night."

--

As we go to air Elmer says that the ham is still in the hospital recovering. More important he is alive thanks to his friends on the Los Angeles 147.435 MHz repeater.

For the Amateur Radio Newsline, I'm Mert Garlick, N6AWE, also in the City of Angels.

--

In past years the Los Angeles 4-3-5 repeater has received a lot of negative press. This time the press is positive because this time it and its users probably saved a life. (ARNewsline(tm))

**

COORDINATION: REVISED SOCAL 2-METER BANDPLAN NEARING APPROVAL

Still in the Golden state, December 6th was the date set for a vote on a revised 2 Meter bandplan proposed by TASMA, Southern California's Two Meter Area Spectrum Management Association. Amateur Radio Newslines Bruce Tennant, K6PZW, gives us a sneak peak:

--

Among the problems the revised bandplan seeks to correct is recognition of the work of neighboring coordination councils. TASMA has always officially acknowledged the Northern Amateur Relay Council of California, but not those serving the states of Arizona and Nevada. California shares borders and R-F with those states and the revised TASMA bandplan will provide for such political recognition.

Also to be considered will be frequency assignments for specific modes and updating the recognized manned space operations listings. This to conform the Southern California bandplan with the world in relation to current Amateur Radio International Space Station operations.

This revised plan is the product of 2 years of hard work by the regional coordination body written with significant input from the areas Amateur Radio community. It already received a thorough public review at the 2003 ARRL Southwestern Division Convention last September.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

For more information please visit www.tasma.org. (TASMA, ARRL SW Commuinicator)

**

Break 1

We are the Amateur Radio Newsline, heard on bulletin stations around the world including the W6JW repeater serving Santa Clarita California.

(5 sec pause here)

**

RESTRUCTURING - SOUTH AFRICA: PROPOSED CHANGES TO LICENSE REQUIREMENTS AND PRIVILEGES

Another nation has taken the first steps in restructuring its Amateur Radio service. We have this report on what South Africa has done so far in welcoming codefree operations:

--

South Africa is taking a look at how to handle the question of Morse code testing until such time as it goes away and it looks as if it has an answer. It comes in a proposal to lower the Morse requirement from 12 to 5 words per minute. That is until applicants for the South African Zed U license will no longer need be tested for proficiency in Morse code.

Also proposed is the introduction of a new license class with the callsign prefix ZT. This license will not have any Morse code requirement. Rather, the holders of ZT licenses would have full VHF privileges and will be permitted to transmit with a maximum power output of 100 W on portions of the 160, 80, 40 and 15 meter bands.

For the Amateur Radio Newsline, I'm Ken Locke, N8PJN.

--

This interim solution would hold in South Africa until a final disposition on the future of Morse testing is made by that nations telecommunications regulators. (Q-News)

**

THE VEC PROGRAM: NEW GENERAL CLASS QUESTION POOL RELEASED

If you are planning to take a United States General Class written exam after next July 1st or know someone who is, then listen up. On and after that date tests will be based on a new set of questions just released by the Question Pool Committee of the National Conference of Volunteer Examiner Coordinators.

According to a news release from the committee, changeinclude the number of questions increased to 432 and release pf the pool in both Microsoft Word and ASCII text formats with no graphic files. Look for the new questions in cyberspace at www.arrl.org/arrlvec/pools.html. (W4WW, NCVEC)

**

RADIO LAW: COMPLAINT LEVELS TO FCC RISE

The United States FCC has released a report on the inquiries and complaints processed by its Consumer & Governmental Affairs Bureau during the third quarter of 2003. According to the report complaint activity increased within all major areas except cable during the third quarter.

The largest increase occurred within Radio and Broadcasting where a total of 19,920 indecency and obscenity complaints were received. Complaint activity was also higher in all five top wireless categories, with the largest percentage increases coming in the service quality and equipment section. Its all in cyberspace at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-241435A1.doc (CGC)

**

ENFORCEMENT: YET ANOTHER TOWER FINE

The fines for tower related violations continue. The latest is an $8000 fine issued to the Barinowski Investment Company, L P. Barinowski is the owner of a tower located near Savannah, Georgia. It was cited for failure to clean and repaint its antenna structure to maintain good visibility. (FCC)

**

EMERGING TECHNOLOGY: NET-BY-PHONE NOW PLAYS MP3

The HandiHams say that there is now an MP3 file playback feature on the Net-By-Phone service that allows blind users who do not own a computer to access the Internet. This, by using a plain old vanilla telephone.

By way of example, a Net-By-Phone user accessing a website like Amateur Radio Newsline that has a link to an MP3 file can hear that file over the phone by simply selecting it. The system does not play the file right away, but it will download the file in the background and send you an e-mail when it is ready. When you retrieve the e-mail, the file will automatically play, just as a voice e-mail from a Net-By-Phone customer plays automatically.

Net-By-Phone is located in Chicago and is a fee based subscription service. You can find out more on the web at www.net-by-phone.com or call the toll free demonstration line at 1-800-358-7858. (HandiHams)

**

HAM TRAINING: TRAIN THE TRAINER

49 youngsters are now licensed hams and are the newest members of Pennsylvania's Trinity High School Radio Club. This, thanks to a program called "Train the Trainer" by Pete Di Volpi, K3PD, a teacher named Sean Barnes, N3JQ and the Harrisburg Radio Amateurs Club V-E Team.

TheTrinity High School Radio Club operators station KB3JAG. Barnes started the radio club so lower classmen could get exposure to the hobby before they attend his physics class. He notes that the schools physics program and the principals of amateur radio teend to integrate very well.

The Harrisburg Radio Amateurs Club is a Special Services club in central Pennsylvania. It has only 100 members, but has seen over 100 new licensees produced in the last two years from their V-E and Train the Trainer programs. Teachers that are interested in Sean Barnes curriculum can e-mail him to SeanBarnesPolo@aol.com (W3UU, K3PD)

**

HAMFESTS AND CONVENTIONS: FT.TUTHILL BECOMES WILLIAMS HAMFEST

The Ft. Tuthill Arizona hamfest has changed its name, its location and its date. Now the Williams Hamfest and ARRL Arizona State Convention, this premiere event will be held next July 2nd to the 4th, at the Williams Rodeo Grounds, Williams Arizona.

According to a news release from Mark Keshauer, N7KKQ, the move means that the hamfest sponsors can provide lower fees for tailgaters and campers, bigger spaces, a fireworks display and free admission. Most important, the famed Saturday night B-B-Q which is a staple of this show -- will continue. Sorry, that's not free but is among the best feeds found at any hamfest in the United States.

More information is on-line at www.arca-az.org/arca/images/press%20release (N7KKQ)

**

HAMVENTION 2004: THE YEAR OF THE CONTACT

Hamvention planners have announced that the theme for 2004 will be the "Year of the Contact," and they are starting out by improving their own. Amateur Radio Newsline's Bill Pasternak, WA6ITF, has the details:

--
According to Hamvention General Chairman Gary Des Combes, N-8-E-M-O, his team has been making numerous changes to the shows web site, This, so that things like exhibits, general admission ticket sales and Flea Market spaces can be handled on line and the necessary forms simply downloaded.

And yes, we did say Flea Market rather than Outside Exhibits. As regular listeners know, a number of years ago the Hamvention made the name change to Outside Exhibits. Only one problem. The ham radio public never bought in to that new upscale title.

Hams have always referred to the Hamvention Flea Market as -- well -- the Flea Market. So, taking a cue from the many radio amateurs who have responded to the Hamvention request for input, show planners have gone back to the future. Des Combes says that as of now, the Flea Market is the Flea Market, once again.

Gary Des Combes tells Amateur Radio Newsline that this is only the first of a number of "Going Back to the Future" changes that the public has asked for and that they will get. In fact, "Going Back to the Future" will be a sub theme during Hamvention 2004.

The dates are next May 14th to the 16th. The location is the HARA Arena in Trotwood Ohio just outside the city of Dayton.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, reporting.

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

HAMS HELPING: THE NORTH POLE NETWORK

The holiday season brings hams a great opportunity. What better way could there be to introduce hospitalized children and their families to the magic of Amateur Radio--and to spread holiday cheer--than to arrange to have Santa visit them via Amateur Radio? Newsline's Joe Moell, K0OV, tells us about the North Pole Network.

--

Kids at Childrens Hospital of Orange County get holiday visits from clowns, carolers, firemen, baseball players and rock stars. But nobody is more welcome and anticipated than the ten Amateur Radio operators who arrive on the weekend just before Christmas. They come to establish a special ham radio link that makes it possible for patients to talk directly to the "real" Santa in his office next to the big toy workshop at the North Pole.

Members of the Hospital Disaster Support Communications System have been visiting children and adults in Orange County hospitals for over 25 years, and we think there's no better way than this to spread holiday cheer while showing our hobby in the best possible light.

Will your club be part of the North Pole network this year? If so, we have some suggestions for you. For instance, personalize each QSO. It would be easy to just put the mike in front of a little girl and instruct her to tell Santa her name and where she lives. But imagine how much better the QSO will be if Santa calls her by name right from the start. He's Santa Claus, so he should know! Before each year's North Pole Network session begins, the hospital therapists provide our North Pole station with the list of names for every room and bed, along with plenty of other tidbits about the kids that make good conversation starters for Santa.

You'll find lots of other hints for your best North Pole Network ever at our group's special Web site. The URL is long, but you can get to it with one click from the Hospital Disaster Support Communications System site at www.hdscs.org

The most important hint we have for you is: Don't miss the miracles. Every year, we have had at least one extra-special encounter that astonished families, staff and the hams. In a Santa QSO, children have spoken for the first time following brain trauma. Fevers have broken shortly after North Pole Network visits. A head injury patient started

to eat after being encouraged to do so by Santa, and so forth. We don't know exactly how much the personal contact with Father Christmas has aided in patients' recoveries, but we are always grateful that our hobby can add a little joy and holiday spirit to patients and their families.

Again, the Web spot to visit is HDSCS.org, short for Hospital Disaster Support Communications System. From southern California, this is Joe Moell Kay-zero-Oscar-Victor for Amateur Radio Newsline.

--

More on this and other ham radio holiday activities in the coming weeks. (K0OV, ARNewsline(tm))

INTERNATIONAL - AUSTRALIA: VK2BVS HONORED BY VK PRIME MINISTER

Australia's Prime Minister John Howard and Foreign Minister Alexander Downer expresses gratitude for Australian ham radio training in developing countries. This, by way of a certificate sent to Sam Voron VK2BVS in which the Australian Government expresses its gratitude to Voron for a valued contribution towards assisting developing countries to reduce poverty and achieve sustainable development.

The honor was bestowed on Voron for the six months he spent in Somalia where he organized an Amateur Radio training course. In addition to Howard and Downer, the certificate was signed by Dr. Brendan Nelson who is a member of Australia's Parliamentary House of Representatives. (QRZ.COM)

**

INTERNATIONAL - SWEDEN: NEW PAN-EUROPEN TV SHOW ON ITS WAY

Ham radio in Europe will soon have a TV show of its own. Jeramy Boot, G4NJH, is in Nottingham, the UK, with the rest of the story:

--
The Swedish-based 'Club-TV' wishes to establish a monthly amateur radio magazine programme to be transmitted via digital satellite TV to most of Europe. Club-TV wants to cover all aspects of amateur radio and thinks there is a number of amateurs around Europe who can handle a video camera and edit the result.

Videos of 10 to 20 minutes would be perfect. There is no cost involved other than the tape as the broadcasts receive commercial sponsorship.

During the past year Club-TV has carried out a number of tests and broadcast a couple of programmes. The transmission is via the Sirius 2 satellite at 5 degrees East with a Symbol Rate of 6667 and FEC 1/2.

Jeramy boot, G4NJH.

--

Jeramy says that inquiries go to Ben Jockert, SM6CKU, by e-mail to sm6cku@parabolic.se. (GB2RS)

**

ON THE AIR: NEW VHF/UHF PROPAGATION BEACONS NEAR ATLANTA

Back in the United States, Gary Bailey, WA4IOB, invites VHF operators to listen for his new 2 meter and 70 centimeter beacons. The transmitter are located in grid E M 73 near Snellville, Georgia about 25 miles east of Atlanta. The mode is CW on 144.285 MHz and 432.352 MHz with 2 watts output on each band. The 2 meter transmitter feeds a horizontal square loop. The 70-centimeter antenna is 4 half wave dipoles in a 90-degree horizontal quadrature configuration feedwith a 4-way power splitter. Both sign the call B B B W-A-4-I-O-B slash E M 73. Signal reports go to grb734@bellsouth.net (VHF Reflector)

**

DX

In D-X, LA5RIA will be active as JW5RIA from Bear Island until June of JW5RIA will operate on 160 to 6 metres CW, SSB and digital modes. Q-S-L as directed on the air. (RSGB)

Also, eight American operators are active from Christmas Island, East Kiribati, until the 7th of December. Call signs to listen for are T32MP, T32WW, and several others on all bands using all modes. They will have three stations with amplifiers and a large selection of antennas to pipe their signals worldwide. (RSGB)

**

THAT FINAL ITEM: A KILLER RENEWAL

And finally this week, the story of a ham who might have a hard time attending a license renewal hearing. Thats because he is in jail. Amateur Radio Newsline's Don Wilbanks, AE5DW, has more:

--

According to the ARRL Letter, the FCC has issued an Order to Show Cause to a Texas ham who is currently serving a 32-year prison sentence for the 1996 murder of his wife. The order released November 21st is the governments opening salvo in a hearing process that could end with the revocation of the Advanced class license of Roger Thomas Scaggs, W-5-E-B-C.

The FCC says that Scaggs' murder conviction raises very serious questions as to whether he possesses the requisite character qualifications to remain a Commission licensee. It also causes the agency to question whether his license should be revoked.

Scaggs is 64. He apparently was able to renew his ham ticket in the spring of 1998. This is the same year in which he was later convicted of murdering his wife. The FCC granted Scaggs' application for an

administrative update. In this case, apparently a change of address from Austin to Gatesville, Texas.

The FCC only recently became aware of Scaggs' murder conviction, which could keep him behind bars at least until he's 75. Assuming that Scaggs indicates that he will appear for or be represented at a formal hearing, the FCC will follow up with a Hearing Designation Order.

The session itself will be held before an Administrative Law Judge and would consider evidence concerning the effect of Scaggs' felony conviction on his qualifications to remain an FCC licensee. If no action is taken Scaggs license will next expire in 2008.

For the Amateur Radio Newsline, I'm Don Wilbanks, AE5DW, in New Orleans.

--

Scaggs was given the customary 30 days to let the FCC know whether he plans to appear at the hearing. (ARRL)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Meachen, ZL2BHF, saying 73 and we thank you for listening. Amateur Radio Newsline(tm) is Copyright 2003. All rights reserved.

You made a statement that most people had such exposure and while I naturally knew that was only your opinion, you stated it as if it were a fact. Therefore I was justified in asking you to provide the data to support that statement.

That puts you ahead of me. I still don't catch whole words just the individual letters and catch the letters as they come. There are some exceptions to that though. "CQ" and "CQ TEST" come through immediately as words.

No Kim it is not. He made a statement as if it were fact rather than his personal opinion that most people had had exposure to Morse code. I challenged him to prove it. This is standard operating procedure in debate. Since he is the originator of the statement, then in a debate, he must be prepared to back it with facts. That the subject here is Morse code does not negate debate procedures even if he wishes it did.

Bzzt, passing a code test is NOT required to use morse code
on ALL ham bands. A "no-code" tech is free touse morse
at whatever speed or skill level (or lack of skill level) one
wants to. I have no recollection of anyone ever being cited by
the FCC for "sloppy" or too slow a code speed. Have you?

> >At least be able to recognize

That isn't a requirement in terms of actual use of morse.

Did the novice test, even in 1960 adequuately do that? I say no, yet
those novices were also free to "homebrew" or build it themselves.

> >I doubt the FCC
> >would ever do

> IMHO they've been gradually watering down the theory tests for over 25
years.

Frankly, the General test of 1960 wasn't all that theory difficult. Many of
us just memorized some formulas and some circuit diagrams.

Cheers,
Bill K2UNK

Good thing I never made the argument about code testing
being a barrier. I have always strictly viewed the code test
as simply no longer necessary as a test requirement.

>took the Tech and General prior to that.

Depending on when someone gets their Extra, they may have taken as many as 5 separate written tests (Novice, Tech, General, Advanced, Extra - March 1987 to April 2000) or as few as two (General and Extra, 1951 to 1967)

The total number of questions has varied similarly, but the current total is the lowest since the 1951 restructuring.

>The material on each test is
>different, with later tests building on the material in the earlier tests.

Depends on the subject.

>To cover the same material an Extra has covered today ("similar
>difficulty"), your new test would have to include the material covered in
>all three current tests (with over 120 questions in one sitting).

"Similar difficulty" doesn't mean the same material. Obviously a lot of the basics would be covered in the Class B. And with the simplified structure, some of the questions like subbands-by-license-class would go away.

However, since the Class B would be a simplified test, the Class A would probably need to be 150 questions...

>So, are
>you advocating that, advocating some type of reduced content test (less
>questions), or did you simply forget the material on the first two tests?

I suggest something different.

There's no need to retest what has been already tested.

Also, a big test should be broken down into pieces-by-subject and graded that way. IOW, a safety part, a regs part, a theory part, etc. And you have to pass each part (subelement) to pass the test - aceing the theory shouldn't allow you to get all the safety questions wrong, for example.

--

Related question for Hans: Would existing Extras get Class A licenses automatically, or would they have to retest?

My inclination would be for current Extras to remain Extras unless they took the new test. Lots of guys (Larry comes to mind) attach a certain cachet to their current license, having "done it the old way". I've no problem with honoring that.

And I like your notion of splitting the Class A test into broad subject areas --- off the top of my head "Electronics/Communications theory", "Regulations and Safety", and "Operating Practices" would make a nice three way division with perhaps 35 questions per segment.

That doesn't change my response. Again, show me where such statistical data is collected and I'll cite it for you. Of course, you know it isn't collected, and therefore my comment could not have been based on that, so your question was clearly disingenuous.

This is a newsgroup, not a debating society, Dee. As such, there are no debate procedures. Instead, simple common sense applies in newsgroup discussions (as in most discussions). Since you're aware that nobody collects such data, simple common sense should have prevented you from even asking for that.

In the end, I've described several, what I consider, serious faults in your proposal, and that's without even getting into what I think the FCC's perspective might be. I don't even think you're being realistic at this point. Because of that, I don't think your proposal has a chance in Hades of getting any further than a passing discussion in this newsgroup. As such, I'll pass on any further discussion about it until something more substantial is added to the discussion.

Thank you. I was kind of hoping you might have something to add but so far you've only been a detractor, so it's probably just as well that you have decided to withdraw from the discussion.

Have a great holiday season.

No I was illustrating that your statement was clearly disingenuous. Hiding an opinion by making a statement that was couched in terms to make it appear as if it were a fact. Therefore as a debater it is not only my right but my duty to challenge it and ask you for proof. And you can't provide it. Instead, you attempt to ask me to prove your statement, which is an invalid debating technique.

Of course, Jim. However, I was under the impression we were talking about the present (the three written tests).

> "Similar difficulty" doesn't mean the same material.
> Obviously a lot of the basics would be covered in
> the Class B. (snip)

I've looked over the existing exams and there isn't a lot of repeated material. By the way, are the "Class B" operators going to be prohibited from building their own equipment also? If not, how would one really make the test simplier?

> And with the simplified structure, some of the
> questions like subbands-by-license-class

So we're now going to restructure the sub-bands also? This whole thing is getting more absurd with each message posted.

> Related question for Hans: Would existing Extras
> get Class A licenses automatically, or would they
> have to retest?

Oh, you know Extras are going to be grandfathered into the new license structure, Jim. Hans has no intention of messing with his fellow, perfect as is, Extras (just the rest of the ham community).

If put to a vote today, I think many Europeans would be thrilled to end NATO. Of course, since it benefits us (the USA), this country would strongly resist that. In other words, what you say is nothing more than a shallow threat (and the Europeans know it).

We *are* talking about the present. Present-day Extras took a wide variety of written tests. For example, Hans took a single 100 question written test to go from General to Extra. I took two 50 question writtens to make the same transition. An April-16-2000 Extra took a single 50 question written. But all of us prenetly hold the same license with the same privileges.
>

Sure - but the emphasis would be different.

>By the way, are the "Class B" operators going to be prohibited
>from building their own equipment also?

Just the opposite, I think! But it's Hans' proposal - ask him.

>If not, how would one really make
>the test simplier?

Take the current Tech test. Remove some of the RF exposure stuff (because Class Bs can't use more than 50 W). Add in some HF and Class B rules stuff. Done.

Since Techs are authorized to design/build/modify/repair/align/operate amateur gear using any mode and any technology, the Tech written test must be adequate for homebrewing, right?

How different is homebrewing for HF from homebrewing for 6 meters? (If anything, homebrewing for 6 meters is more critical because of the higher frequency).

Remember that Novices and Tech Pluses are already authorized to design/build/modify/repair/align/operate amateur gear using any CW and SSB on

10 meters, and CW on 80. 40, 1nd 15 meters, using any technology.

>> And with the simplified structure, some of the
>> questions like subbands-by-license-class
>> would go away. (snip)
>
> So we're now going to restructure the sub-bands also?

Nope.Haven't you read Hans' proposal?

Both Class B and Class A hams would have access to all amateur frequencies. For example, on 40 meters/Region 2 they would have:

7000-7150 CW/data
7150-7300.CW/phone/image

Compare this to the current mess of subbands on 40 for Extras, Advanceds, Generals, Tech Pluses and Novices.

>This whole thing is
>getting more absurd with each message posted.

Why "absurd"? Hans is proposing to dramatically simplify things for new hams. Lots of privileges for new hams. No more big divide at 30 MHz. No more having to memorize lots of little subbands which then become obsolete as one upgrades.

And existing hams don't have to give up anything they already have. If an existing ham wants to join the new system, just take a test.

My Extra license is up for renewing soon. I'd take the Class A just to avoide that little chore....
>
>> Related question for Hans: Would existing Extras
>> get Class A licenses automatically, or would they
>> have to retest?
>
> Oh, you know Extras are going to be grandfathered into the new license
>structure, Jim.

Not according to Hans' answer to the above question.

>Hans has no intention of messing with his fellow, perfect as
>is, Extras (just the rest of the ham community).
>
Do you really think such a test would be a problem for most of us Extras? I say "Bring it on!! - I got yer Class A right here!"

I don't agree with Hans' proposal in some areas, but I'd hardly call it "absurd".

Four years ago there were 6 license classes open to new hams. Now there are only 3, but the other 3 classes are still held by almost 200,000 hams. Was that an "absurd" change? Tell it to the FCC!

Hans' proposal would create 2 new license classes and close off the other 6 to new licensees. Is it really so absurd, given the changes we've already seen?

His proposal is no more absurd than the claim that a single 5 wpm code test is a "barrier".....

It's not really three, though. Although the 'Tech Plus' was abolished in theory it still exists in practice. That particular absurdity will go away when Element 1 is abolished, which it soon will be. To avoid actually taking away any privileges the FCC will have to give the Novice subbands to all Techs (assuming Element 1 will no longer be mentionned anywhere in Part 97, the only other alternative would be to take them away from those Techs who have them now, which would be very unpalatable).

I don't agree with all aspects of Hans' proposal. In particular, I oppose all time limits and time in grade requirements. However, I think that something ultimately will have to be done about the status of Novice and Advanced licences. It is just too messy to maintain closed licence classes indefinitely. I would have no problem with automatically upgrading them all, but I know that many others would not like it. Maybe the way around this is to have new (or at least re-named) licence classes. Someone who objects to Advanced licencees getting a free pass to Extra may aquiesce to both becoming Class As, for example. A rose by any other name would smell as sweet?

So maybe Class A (Extra/Advanced), B (General) and C (Tech/Novice)?

Why is it "just too messy?" Afterall the databases are computerized.
Renewals will have to be processed regardless of whether the person stays at
the same level or upgrades. There is no problem generated by having the old
classes and no advantage whatsoever to combining them.

Exactly the idea. A person would have to get a passing grade in each subject area on the same test, so it would still be one test, not three.

I'd even suggest doing the something similar to the Class B test.

Maybe I missed a post somewhere. What would be the difference,
other than name, between a Class A and the Extra? If the
only difference is the name, why would any Extra waste time
to pass a class A test whenit buys them nothing?

Also, why would the FCC want to maintain the name difference
in their database if that is all it is?

Cheers,
Bill K2UNK

No, my vision for the Class B test is similar to the original Novice exam.
Some basic stuff to ensure the applicant has an acquaintence with the
subject matter, and not heavily weighted in any single area, and not such a
tight screen that it blocks those with 'casual interest'.

I was actually commenting, allbeit out of synch, on your defense that someone can't know they don't like something without experience...etc. I think that argument is quite indefensible...since it's quite common to decide that one doesn't like something (or does, for that matter) without any particular experience with it. For example, things I don't, or wouldn't, like that I've never tried:

parachuting
picking up clothes at a cleaners
dropping off babies to daycare
raising grandchildren
holding snot in my hand
bungee jumping
parasailing
rough sex
working in a foundry
getting a tattoo
being bald
all kinds of food
spelunking
building a computer...or anything for that matter
being a man

Add countless other things to that list.

If you accept the premise above that I don't like those things without ever having tried them, then you should accept that I know I would not like CW without having any real experience with it.

Nope. I disagree, but only because I approach this venue exactly in the same manner as Dee. I like debating and there are few people who can do it artfully. But, I don't think I've ever expected anyone else to approach it the same way I do. However, to engage one in discourse almost dictates that you must be willing to communicate at their level and in their manner. For example, Waddles is way down below my league, so I don't even get his posts any more. Same for Dan. Larry's just fun...

"Mike Coslo" <mjc5@psu.edu> wrote

> I'm almost afraid to ask, Hans. What is QCAO?

Quarter Century Appliance Operators club, sorta like the QCWA (Quarter Century Wireless Association). See press release below.

73, de Hans, K0HB

News Release:

QCAO Reorganizes

The Quarter Century Appliance Operators was founded in the early 1950's by a small group of Amateur Radio operators from the Pacific Northwest. They had been active in their hobby for over 25 years, yet still lacked the basic knowledge of radio electronics and had no idea of how their equipment worked.

They banded together to try and protect each others honor and pride. At radio gatherings and club meetings in the 1950s one was considered unworthy of the name Ham Radio Operator if he or she couldn't not only name components, but know how to solder them together and make a radio work, or fix a broken set!

When faced with insults and dreision, those few hardy pioneers banded together and formed the First Chapter and National Organization of the QCAO. This was known as the "Cold Solder" Chapter. They even coined the now-famous club byword "e pluribus ignoramae" which is Latin for "We don't have to know how to solder, we just wanna talk on our radios."

No veterans of that first chapter are known to be active on the air today. In the late 1950s and early '60s, with the worldwide interest in science and space and technology, the QCAO membership went underground.

It is with great pride and dignity that today in the 21st Century the revived QCAO stands ready to rise from the ashes, and become the standard of mediocrity it once proudly was. In honor of those first pioneering members, QCAO hereby invites all eligible applicants to step forward and join!

The benefits of QCAO include not only the pride of membership. Think of the warm glow you will feel at club

meetings and gatherings showing off your new all-plastic imprinted QCAO pocket protector! And that's not all! For your minimal membership fee, you will also receive a handsome, suitable-for-framing, certificate of honor, with hand-lettered name and Charter Membership Number. Other QCAO memorabilia will soon be available for members, including T-shirts, caps, pins, etc. At this date charter membership numbers are still available. Membership requires a 25 years (more or less) interest in Amateur Radio, coupled with a basic ignorance of how radios work and how to repair them.

Think of meeting other QCAO members on the air! No more embarrassing pauses when someone in the QSO mentions an RF choke or a parasitic bleeder...Be able to exchange meaningful sharing, talk about real things, yes, even swap QCAO numbers with each other! And soon perhaps . . . a worldwide QCAO contest!

You no longer have to shrink to the back of the room at post-meeting sessions of your radio club. Just display your QCAO protector and others will be able to identify you immediately. Who knows? Perhaps one of the originals from that old QCAO Chapter is just waiting for you to find him. Join now! Remember "We don't have to know how to solder, we just wanna talk on our radios"! Don't let technoids embarrass you and kick jargon in your face. Stand up for what's right! Join QCAO!

"e pluribus ignoramae"

Yet if lots of time elapsed between upgrades, that's not going to be completely accurate.

>> To cover the same material an Extra has covered today ("similar
>> difficulty"), your new test would have to include the material covered in
>> all three current tests (with over 120 questions in one sitting).

Not really. It would only have to cover the stuff not covered in the Class B test.

And if it takes a 120 or 150 question test, is that really a problem? We're not talking EE or PE level questions here, just multiple choices from a published pool.

>> So, are
>> you advocating that, advocating some type of reduced content test (less
>> questions), or did you simply forget the material on the first two tests.
>
>Well said, Dwight. Everything is built on what went before it. So now
>what sounded kind of easy is not so easy. Someone here, perhaps Jim,
>pointed out how the Extra license tests did not address RF safety much
>if at all.

I don't recall saying that, but maybe I did.

Point is that a Tech today needs to be tested on RF safety at the 1500 W level for VHF/UHF/microwaves, which are obvioulsy present the most hazard (as WK3C says "meat-cooking frequencies"). Generals need to be tested on *all* RF exposure, because they have *all* bands and full power.

Meanwhile us *old* (pre-1996) hams never had any RF safety stuff in our tests. (At least some of us - ahem - learned the stuff anyway so we'd be current with the current tests)

But is RF safety really that tough a subject?

>But wait! the Class B tests are apparently not going to
>address RF safety either because the power is limited to a "safe"
>amount. So now safety related learning is confined to the second test
>for class A.

Sounds reasonable to me.

> That includes some practical experience.

Not necessarily. I've made decisions to do (or not to do) many, many things without a lick of practical experience. I have decided not to be a surfer, I've decided not to eat chocolate covered insects, I've decided not to engage in same-gender sex, I've decided not to be a vegetarian, I've decided not to be a Hindu, all with some 'education' on the subject but without a bit of practical experience. I'm sure some folks make the same decision about whether to learn Morse code.

> However, many of these anti-code
> folks are about to diminish the value (As a whole.) of a hobby I dearly
> love...despite having a very generous chunk of no-code RF real estate.

Bert, with all due respect, how are they diminishing the value of Amateur Radio? I truly enjoy Morse code, and use it frequently, but I'm not persuaded that we need a Morse qualification test any longer. I'm a member of FISTS and I'm a member of NCI. I see both organizations as having goals which advance Amateur Radio for me. FISTS encourages people to use Morse code, and NCI encourages regulatory agencies to modernize the qualification process for new licensees.

If some new guy/gal gets on HF without knowing Morse code, the value of Amateur Radio has not been diminished for me.

>being a barrier.

Agreed!

So we have to wonder why, even after almost four years, so many hams have not upgraded. I can think of several reasons:

1) Perfectly happy with the license they have now
2) Don't know what's involved in upgrading
3) Dead, incapacitated, or completely inactive.
4) Haven't gotten around to it yet.
5) Waiting for the requirements to change yet again (for example, there was a false rumor some time back that Advanceds would get a free upgrade to Extra)
6) Can't pass the written tests yet.

I expected the numbers of Advanceds and Tech Pluses to drop faster than they have in the 43 months.

BUT THEN change the CW band plan.
Eliminate the current segregation of the CW bands by license level and institute a band plan based on transmit speed. We could have Low speed - 5 wpm, Medium speed - 12 wpm and High speed - 20 wpm band sections. Even if you have an Extra license, you need to stay out of the "Fast Lane" unless you can keep up with the traffic.

I do NOT accept the premis that a person can know what they like without trying something. While there are many valid reasons for not trying these things, you cannot know if you would like them or not. For example, the fear of heights and the potential risk factor stops me from trying parachuting. Thus I can never know whether I would actually like it. In the case of the 5th item on your list, it could be downright unhealthy and should NOT be tried even if you think you would like it.

There's lots of things in life that I thought I would not like until experience proved me wrong. I originally got into ham radio simply because my husband at that time insisted I do this with him. Of course I "knew" that I wouldn't like it and was only doing it to please him but in the end I was proven wrong. It is one of my favorite pastimes.

Hello Bill ....

Yepper that's what we need a novice ghetto .... I can't understand why people can't see that one reason that the CW mess we are in is partially due to the CWists.

Yep lets put the newcomers on 80 where the summer QRN blows the phones off your head ....or better yet let them work DX between all the crap on 40 ... but wait go to 15 where the band has needed Viagra over the last few years. Give 'em a sliver of band so they can prove their worth .

I have always said that 5 WPM is a good entrance speed and should be accepted "all over" the bands. Let the true ham spirit shine and let the "speeders" slow down and work the new ops just like we once were ...or did we forget??? For those that don't ...well your dirty underwear is showing. We need to foster our mode not our speed accomplishments.

To repeat myself ....my CW unravels like a cheap sweater at 45 WPM .... maybe I shouldn't get the bottom 5-10-20 kcs (your pick) of each band.

God Bless 73 Tom Popovic KI3R Belle Vernon Pa

I disagree. It's not like driving where it would be dangerous to be going slowly in the fast lane. Instead it is more like, oh say tennis, if you really want to improve, you work with the best even if you can't yet match them.

Do either of them really create a problem? I entered ham radio with both of
those features (Novice license only good for two years, upgrade or go off the
air, and a two-year experience rule for Extra). I don't think they were such
awful ideas.

However, I doubt FCC will go for either. Just MHO.

>However, I think that
>something ultimately will have to be done about the status of Novice and
>Advanced licences.

Why? They're just entries in a database. Since no new ones are being issued,
they involve no more admin work than other license classes.

At the end of 1952, FCC stopped issuing new Advanceds. They allowed existing Advanceds to keep those licenses, renewing and modifying as needed. Most of the approximately 40,000 Advanceds of that time did just that.

Then, almost 15 years later, FCC reopened the Advanced to new issues.

>It is just too messy to maintain closed licence classes
>indefinitely.

How is it messy?

Renaming isn't going to fool anyone that is against free upgrades.

Is the current 50 question Extra test so tough that it presents a serious "barrier" to existing Advanceds?

What is the problem of keeping old license classes on the database and rules?

Your mileage may vary, Dee, but I *know* I would not like any of the items I listed. And, I cannot believe anyone would do something (outside of employment that is) because someone insisted on it--most of all a spouse or family member--who should know far better than to "insist" on anything from me that I don't wish to do. Nor would I insist of anything from them.

I don't oppose a time limit per se. I don't like a ten year time limit
though.

I support a time in grade, even though I would be frustrated (read
teased) by a two year stint before I could get the class A. Another

thing, which would be a little strange would be having to have a control op at field day (or operate lower power)

No, you misunderstand my position. I'm not backing away from my statement. I still feel it is entirely accurate and therefore fact. However, as you well know, I can't prove it because nobody gathers such statistics. But that alone doesn't change the accuracy of a statement. There is a lot of truth and facts in this world that isn't backed up by statistics.

Then we all need to get together and establish specific rules for debate in this newsgroup. And everyone should be made aware of those rules to insure an even playing field. Without that, screaming about rules and procedures is a little absurd, don't you think? So lets talk about common debate rules. Every debate I've seen allows for opinion - even opinions about what is a fact when that is not clear. Since nobody gathers statistics for what I said, there are no facts to prove or disprove my statement - there is only opinion either way. Therefore, since everyone involved has now admitted to knowing that nobody gathers such statistics, my statement would be acceptable even under standard debate rules and any challenge following that could only be interpreted as an attempt to sidetrack the debate (which, I believe, is not proper debate procedure).

Wow. I never knew that NATO benefitted the USA. I always assumed
that it was just another welfare agency that sucked us dry.

So please detail the benefits that the USA receives, and don't tell me
it's an unlimited supply of blue helmuts.

Brian

FEELING that something is true or false doesn't make it so. You have made an assertion that you claim to be fact therefore it IS up to you, even in a casual discussion to back it up with data. If that data has not been collected, then you cannot make such an assertion until either you find a data source or collect that data with valid statistical methods.

No one in my experience outside of ham radio knew anything about Morse code except possibly its name. Therefore I could state that most people have not had enough exposure to Morse code to make an educated decision on whether they would like it or not. However since I know that this is not sufficient data to provide proof of my opinion, I do not state it as a fact. Although my "fact" is just as valid and accurate as your "fact". This is why opinions are not allowed as proof of anything.

Unless you have statistical data on this, your statement is an OPINION and nothing more.

You need to study up on national defense, Brian. NATO, even today, is critical to our strategic defense in that region of the world. Likewise, bases in Europe play an important role in many lesser conflicts overseas (refueling, supply, protection for ships passing through that area, area commands, and so on). Europe could defend itself today. We benefit that defense just as they benefit our defense. Therefore, we need those bases in Europe just about as much as they need us.

It will be, if FCC acts on it in any way.

>Instead, he just seems to be
>making up answers as he goes along.

Is that bad? His answers are all in agreement with the stated goals and philosophy of his proposal. I haven't found a single case where Hans has contradicted himself in this proposal thing.

Hans has suggested his idea to FCC at least twice - but always in the form of comments to others' proposals. Seems to me it would make sense for him to submit it to FCC and get an RM number, just like the other 14 petitions.

He could just take the various answers he's given here and work them into the proposal (to answer the same questions which are bound to be asked by FCC and commenters) and ship the expanded proposal to FCC.

Even though I disagree with some parts of his proposal, it seems to me that such a formal submission is the next step if Hans is serious about it. And I think he is.

Plus it's good to see a proposal that at least tries to address the situation as a whole, rather than simply trying to slap another patch on the 1951 system.

btw, some of the concepts in Hans' proposal are also part of the KL7CC "21st Century" proposal - like the very-easy-to-get entry license with a low power limit. But Hans had those ideas first!

>If the
>only difference is the name, why would any Extra waste time
>to pass a class A test whenit buys them nothing?

I'd do it just to avoid having to renew.

Plus, I could then say I'd passed both the "old" and "new" tests for full-privileges ham licenses.
>
>Also, why would the FCC want to maintain the name difference
>in their database if that is all it is?

Just a name.

For 15 years the FCC retained the name difference between Advanced and General even though Advanced privileges were exactly the same as General privileges. For most of that time, the FCC "database" wasn't even computerized (the amateur radio data was first computerized in 1964, IIRC).

So I don;t think it would be much of a problem today.

--

I think in all the arguments about the details, we may be losing sight of the main goals of Hans' proposal:

1) Make it easier to get an entry-level amateur license
2) Convey a very large set of privileges with that entry-level license so that new hams can sample *anything* amateur radio has to offer - except high power transmitters.
3) Offer a real incentive for new hams to increase their technical knowledge and qualify for full privilege licenses within a reasonable time
4) Simplify the rules and test procedures (two tests is simpler than three tests, anyway)

Of course there's disagreement about the methods. But aren't these all pretty good goals?

Rod:

Just out of curiosity, have you tried using those speech-to-text programs
on RTTY or other digital modes? I'd be interested in knowing how they
worked.

If you are interested in digital modes and can type a little, you should
consider the MixW software. I am presently using MixW version 2.06,
and it works great on PSK-31, RTTY, and Hellschreiber. It also works
with virtually any other digital mode, but those are the only ones I've
personally used so far. It has very easy to program and use macros, so
it should be possible to communicate very effectively even without being
able to type in real time. I don't remember the web site URL, but just
do a search on MixW and it'll come right up.

Negative. I've already stated that high risk levels of danger are
justification for NOT trying something. Such a risk level overrides the
potential of liking or disliking something. You just are NOT reading what I
write.

You are being deliberately obtuse. Your opinion that it is a fact does not
make it so. And even in casual discussions, I've seen many statements
challenged and the proponent asked to prove it.

To answer your question from another part of this thread, anything that leaves closed licence classes intact feels to me like just another patch. I find it confusing to explain to prospective hams "oh yeah, there are two other classes of licence, but you can't get those anymore". They look at me as if I were mad! We do need a new system, and we need to fit all existing hams into it, albeit I don't think it will happen this time around.

I think the Canadians have an interesting system. Ignoring code endorsements (doubtless soon to become irrelevant), they are split into Basic and Advanced. The Basics get 200W and can go anywhere except 40 and the WARC bands, and can't use homebrew rigs or be a repeater control op. I'm not sure which bands a US Basic ought to get - it might be more useful to keep them off 20 than 40 (besides, Novices and Tech Plusses have part of 40, and we don't want to take privileges away). Also, nobody would want to call the higher grade 'Advanced', for obvious reasons, how about 'Expert'?

Maybe someone in VE would like to comment on whether they like the system they have?

Steve:

The problem with Russian vs. Arab oil is that the Arabian oil is a whole lot easier to get at. You poke a hole in the sand, stick a pipe in it, and out it comes. Moreover, the oil fields are located close to accessible sea ports, meaning relatively short and inexpensive transport of the oil to the ships that will carry it away to the customers. I'm not at all certain, but I'm pretty sure you'd find that Russian oil is not only a whole lot further away from sea ports, but also a lot harder to drill for. A hot, arid climate, while not particularly comfortable, is still a whole lot easier to deal with than a frigid one when it comes to crude oil production. If Russia's oil were, in fact, economically feasible to produce, I have no doubt that those resources would be being exploited to the greatest extent possible.

> Of course that would tick off the Germans who'd be selling a lot
>fewer Mercedes and Audis, but they'd make up the slack on the back end
>selling them in Moscow ! ! !

They'd be better off sending their oil to Japan, which would then oblige by spewing out Toyotas, Honda's, and Nissans for the Russian market.

>the new test.

The FCC would not dare to do anything to alter the "status" of current Amateur Extra-class licensees, particularly those who attained that class in the Pre-Restructuring Era. We've already made it to the top, under a significantly more comprehensive and challenging set of testing requirements, including Morse code tests at speeds up to 20 WPM. Uncle Charlie won't muck around with that, considering it is the white-hot resentment of the General-class licensees of the Pre-Incentive Licensing Era which started the whole debate over licensing standards in the first place. Had the FCC taken the simple precaution of "grandfathering" those hams to the then-new Extra class, we may not be having this debate now.

>Lots of guys (Larry comes to mind) attach a certain cachet to
>their current license, having "done it the old way". I've no problem with
>honoring that.

The truth be known, I give relatively little thought to the fact that I am the holder of an Amateur Extra-class license. About the only time I've ever brought up the subject was to turn up the heat on the whining no-coders. The hardest license class for me to achieve was my Novice, which only came after 14 years wasted in my unwillingness to knuckle down and learn the Morse code. Once I overcame that personal character flaw, everything fell into place with surprising ease.

As far as "honoring" Extra-class amateurs who did it "the old way" is concerned, that would probably not be an issue except for the previously mentioned Inceltive Licensing debacle, and the fact that CB Radio had the effect of "consumerizing" personal radio communications to the point where a demand was created for that capability. Now, in these days of cell phones and "wireless" digital everything, amateur radio itself is all but irrelevant. So, in a way, I guess there may now be some point in "honoring" those of us who reached the pinnacle of the amateur radio licensing structure, under the "old order" set of standards. Perhaps it could serve to show newer hams what they have lost in the sense of true status

attained, and the good feeling of individual accomplishment that it brings. This may possibly cause the trend to again reverse itself, and create a demand for a return to a set of licensing standards which reward increased knowledge and operating skills with greater operating privileges.

All nice quotes, Hans. But not very relevant when there are no facts. Lacking those facts, I can only go with what I believe to be fact. Of course, those who don't agree are never going to accept that.

You're missing the point, Jim. If it isn't in the proposal, he can't give definitive answers to those questions. Making up answers as the discussion goes along in this newsgroup isn't going to change that.

I've tried to give straightforward and responsive answers to every question asked about my proposal. Since it is so far only a proposal (work in process) and not yet a petition, it would be fair to say that some detail is missing and I've done my best to supply that detail, often in a contemporaneous manner. If that isn't definitive enough for you, I suggest you QSY up 5.

Is this message (mine) just now showing up in the newsgroup for people to reply to? I posted it many days ago.

Did anyone hear the story on Fox several nights ago about the Red Cross in England planning to drop the red cross as their official logo? According to the story, they want to eliminate any reference to religion. I don't know if they intend to change the name also. The story said the U.S. chapter insists it has no intention of doing the same. Anyway, since the red cross logo is widely used outside religious circles (hospitals and so on) and I suspect few make a religious connection, I thought the entire thing was a little strange.

> But why the hell isn't there a Salvation Navy?

No department stores in the oceans to collect money at? It's too cold to stand around at piers during the Christmas season? On a more technical note, their ringing bells were mistaken for navigation buoys once too often? ;-)

Fair enough, Hans. However, in the case of the 5-wpm test, it's difficult to fathom how so much effort can be placed on opposing it when such little effort is actually needed to ace it. Does that apply to everyone, no. But at 5-wpm, I believe it applies to the majority. I suppose it's the absence of the willingness to even try to learn something new that I find objectionable. It's commonly hidden behind the "I know I won't like it so I don't even want to learn the basics" defense.

Well, to be honest, Hans...Amateur Radio is a whole lot more than just regulatory to me. I believe that the regulatory agencies have sufficiently modernized the qualification process with the removal of the 13 and 20-wpm exams. Having said that, I further believe that many here, on both sides of the debate, have actually forgotten what the debate is over...the 5-wpm Element 1.

I personally don't think that the 5-wpm is a "barrier" to anybody except those who are unwilling to try in the first place. Additionally, there's been a no-code Amateur Radio license class available for over a decade now. (Via 35 multiple-choice questions for which the Q&A pool is published?!)

I think Element 1 is the bare minimum to be part of a well rounded curriculum, YMMV.

> If some new guy/gal gets on HF without knowing Morse code, the value of
> Amateur Radio has not been diminished for me.
>
> 73, de Hans, K0HB

Compared to you, I'm as green as Kermit the frog on the CW bands. But I have noticed a thing or two. I've yet to hear a dit sent in anger. Jim, N2EY assures me that I will eventually, but I'm still waiting. (And I'm on 30 and/or 40 every night now.) I have listened to some local (As well as some distant.) VHF/UHF repeaters and some of what I've heard made me feel as if Amateur Radio had been a tad diminished. I've heard the "F" word used on 20 and I won't even touch the subject of 75.

IOW, Hans...the trees are falling in out forest, but they're too far away for us to hear them. But it's still our forest as a whole.

Understood. But what right did the United Nations have to create
a new "state" when the people who were already living on that land,
and had for centuries, were not party to that act? That would be like
my state's legislature re-zoning YOUR neighborhood!

> Of course the fine ragheads were trying to kill all the Jews before that

But this is my point...where do the Israeli's get off making scuh
a big ta-doo about Palestinian "terrorists" when they are/have been

just as quick to do a bit of artful manipulation of fear themselves?

And they are still around because Uncle Sam has made it his
business to keep Carrier Battle Groups in the Med!

Rest of stuff we agreed on snipped.

True...and danged good ones too...However they what they DO need
is the threat of any one of the aforementioned Carrier Battle Groups
showing up to back up Isael's play...

Yes, the Israeli's have one of the finest Armed Forces in the
world, an intellegence agency that is second to none, and some
seriously big cajones to use them all...But if we weren't propping
them up, I doubt that they'd make it a year.

An unlikly license aspect since if there is no
renewal, then the FCC data base gets larger and larger
since no licenseever expires. That should really screw up the
statistics as to how many hams there are.

> >If the
> >only difference is the name, why would any Extra waste time

>
> I'd do it just to avoid having to renew.

Last time I renewed the ARRL sent me a nice letter,I signed it
and mailed it back. Sure wasn't any effort on my part worth
the effort involved in a 100 question test..studying, going to a test
session, taking the test. But, your mileage may vary.

> Plus, I could then say I'd passed both the "old" and "new" tests for

pretty
> good goals?

I agree. My comments above are directed at aspects that I think will need
to be addressed. Frankly, I don't give a hoot about retaing an existence
license name
just to show others I passed or did certain requirements that newer hams
didn't.
I think those that deliberately don't upgrade to Extra from Advanced, just
to
show others they once passed a 13 wpm test have a personal self esteem
problem.

Cheers,

All too true...but then too, the geography lends itself to long
pipelines, and once they were laid in, that existing infrastructure
alone would drop the price of oil.

Besides...Russians and Americans are closer in social and
geopolitical ideologies than Americans and those folks in the Middle
East and SW Asia...So let's spend our money where it's appreciated.

The only "CW bands" in US amateur radio today are 50.0 - 50.1 and 144.0 - 144.1
MHz. And they're open to all licensees except Novices.

The HF bands have CW/data subbands.

I don't look upon the country formerly known as the Soviet Union ("Russia" is actually just a part of it) as being a place which is particularly stable, from a political standpoint. They now claim to be our allies, but are they really our friends? Keep in mind the civil strife which continues between the Russians and the Chechnyans (sp?). How do we know that other ethnic shredout groups wouldn't try to assert themselves, should they begin to feel as though they're not getting a fair share of the hegemony? Keep in mind that there is also a large Islamic population over there, and that is always going to mean trouble, from a political standpoint.

That's Traubant, which means "grape." While stationed in Germany, I used to see them occasionally. Traubant drivers were usually experts in the navigation of the many back roads of Germany, since they dared not to venture out on the Autobahns. Their wheezing little 2-cycle engine only put out about 24 horsepower, the thing simply couldn't accelerate at all. I've never driven a "Trubby," but I'm told it's a very lawnmower-like experience.

Without data, in some endeavors (not ham radio) it can be downright
dangerous to act on what you believe to be fact. Without data, one should
tread with caution rather than certainty.

The phrasing used in your posts attempt to make it so. Thus naturally I will dispute the contention that you are trying to make it a fact without any supporting data. Not only are you trying to call it a fact but attempting to make others believe it, again without supporting data.

Working on answers to such questions is actually beneficial in that it
allows you to see where your proposal may need refinement before becoming a
petition. Although I don't agree with what you are proposing, I do agree
with refining your proposal so it doesn't have the gaps that have been
spotted.

I spent a month in DL last spring and noticed a few of those still on the roads. Most of my time was in "previously West Germany", so they may be more prevalent in other parts of the country. The current 'econo-box-of-choice' seems to be the "SmartCar", a joint effort between Mercedes and Swatch (yes, the watch company who wanted to launch a ham-radio satelite with commercial messages a few years ago).

A good CW operator will slow down to the others speed. It makes sense really. Why keep going at QRQ if the other guy can't copy? Or maybe they are just showing off.

I wonder who will be impressed ?

No arguement here ... however I feel we must continue to support Israel. If
for no other (better) reason then for religious issues. I am not a real hot
to trot bible thumper, btw. This country has a lot in common with the
Isralies. As for their right to call the Palestinians terrorists...why not?
Their leader...Arafat is the founder of the terrorist movement. He is the
one that unleashed it upon the world. So the Israelies and the REST OF THE

WORLD have the right to call them terrorists...because that is exactly what they are.

I noted that some time ago, Bill, but nobody commented on it until you did.

Perhaps that's part of the plan! Imagine if the FCC database totals showed the number of hams who had ever held a license, rather than the number of current licenses.....

Japan's operator licenses are "for life", which is one reason their totals appear to be so high.

The biggest downside I can see is that a lot of prime callsigns would be tied up unless family members could be convinced to send in a license cancellation letter.

That's one spin. Here's another: By getting a Class A instead of clinging to my Extra, I'd be setting an example for others *and* reducing FCC's admin workload.

After all, if every Extra got a Class A, there's be no problem. And one of the simplest tests of any action's morality is "what if everyone did that?"

Sure. But obviously FCC though it worth doing for 15 years, and again today with the Advanced and Novice.

Is it really almost four years since those changes?

Actually, they have a logic problem! Because the fact of possesing an
Advanced in and of itself does not prove that someone passed the 13 wpm test
any more than having an Extra proves someone passed the 20 wpm test, due to
medical waivers.

Maybe.

Does anyone have a realistic estimate of how much it will cost and how long it will take to develop Russian oil to the point where it undercuts crude from the Middle East in total production cost? (drilling, pumping, infrastructure, transportation, refining)?

Remember that much of Russia's oil is in places as inhospitable and undeveloped as Alaska. And there's the added problem that the folks there don't necessarily play by American rules....

> Besides...Russians and Americans are closer in social and
>geopolitical ideologies than Americans and those folks in the Middle
>East and SW Asia...

In other words, we should trust the Russians?

>So let's spend our money where it's appreciated.

Sure.

But perhaps we should also consider reducing our dependence on imported energy.

3942. light bulbs in rrap

Newsgroup: rec.radio.amateur.policy
Date: 2003-12-07 18:28:17 UTC
From: Mike Coslo <mcoslo@adelphia.net>
Message-ID: <5jKAb.6151$NN.870834@news1.news.adelphia.net>
Source record: 83368

Some may have seen this one before, but I think it's funny and to the point.

How many rrap members does it takes to change a light bulb?

1 to change the light bulb and to post that the light bulb has been changed

14 to share similar experiences of changing light bulbs and how the
light bulb could have been changed differently

7 to caution about the dangers of changing light bulbs

10 to point out spelling/grammar errors in posts about changing light bulbs

5 to flame the spell checkers

3 to correct spelling/grammar flames

6 to argue over whether it's "lightbulb" or "light bulb" ... another 6
to condemn those 6 as stupid

2 industry professionals to inform the group that the proper term is "lamp"

15 know-it-alls who claim they were in the industry, and that "light
bulb" is perfectly correct

19 to post that this forum is not about light bulbs and to please take
this discussion to a lightbulb forum

11 to defend the posting to this forum saying that we all use light
bulbs and therefore the posts are relevant to this forum

36 to debate which method of changing light bulbs is superior, where to
buy the best light bulbs, what brand of light bulbs work best for
this technique and what brands are faulty

7 to post URL's where one can see examples of different light bulbs

4 to post that the URL's were posted incorrectly and then post the
corrected URL's

3 to post about links they found from the URL's that are relevant to
this group which makes light bulbs relevant to this group

13 to link all posts to date, quote them in their entirety including all
headers and signatures, and add "Me too"

5 to post to the group that they will no longer post because they cannot
handle the light bulb controversy

4 to say "didn't we go through this already a short time ago?"

13 to say "do a Google search on light bulbs before posting questions about light bulbs"

18 who trip over each other in their rush to say "repost!"

1 forum lurker to respond to the original post 6 months from now and start it all over again."

N2EY wrote:

> But perhaps we should also consider reducing our dependence on imported energy.

Here is one that gets me into some trouble. I'm a firm believer that we should:

1. develop as much alternative energy as possible. Although we will never run out of oil, there are some real limits to it's inexpensive production.

2. In the interim, use as *much* imported oil as possible.

3. Our own oil resources should be husbanded very carefully, so we will still have oil in emergencies. We should use only as much as it takes to operate the wells and search for new sources.

It is one of those reasons why I don't believe that we should open that range in Alaska at this time. There may come a time that that oil is needed desparately.

3944. 14 Petitions

Newsgroup: rec.radio.amateur.policy
Date: 2003-12-07 18:59:37 UTC
From: lenover21@aol.com
Message-ID: <20031207135937.21457.00002594@mb-m10.aol.com>
Source record: 83370

As of 7 December 2003, the number of documents in the FCC ECFS
were as follows:

RM-10781 321
RM-10782 272
RM-10783 276
RM-10784 254 [these 7 essentially eliminating the code test]
RM-10785 256
RM-10786 424
RM-10787 674

RM-10805 233
RM-10806 217
RM-10807 177
RM-10808 193 [these 7 essentially retaining the code test]
RM-10809 181
RM-10810 180
RM-10811 992

On the BPL or Broadband over Power Lines NOI, 03-104, there were
5,118 total documents, including a late submission by FEMA stating
that BPL would interfere with their FNARS and Homeland Security.
FEMA radio is regulated by the NTIA and is presumably part of or the
new name for SHARES (?). Both FNARS and SHARES use HF but
FNARS also uses VHF (at least in Puerto Rico).

To access the ECFS documents list, just address:

http://gullfoss2.fcc.gov/prod/ecfs/comsrch_v2.cgi

All you need do is enter the entire proceedings number in the upper
left-hand forms box (along with its prefix, such as "RM-10811").
Documents are in PDF but PDF readers are free softstuff from Adobe.

Or, to stay in the proper Chat Room mode, simply ignore what goes
on in the only real radio regulatory agency for U.S. civilians and
argue the whichness of the what on entertainers, Russian oil reserves,
the right for Judaism to exist in a nation, etc., etc., etc., all having
nothing whatsoever to do with amateur radio...except to REGULARS
who need an Internet kaffe klatsch.

One might, as a U.S. citizen, reflect what happened early one
Sunday morning 62 years ago at a U.S. island in the Pacific. The
result of that rather cut off amateur radio activity in the USA for about
four years.

88 federally licensed lightbulb changers stating that one MUST have
proper legal licensing in order to change light bulbs.

73 long-time lightbulb change licensees to DEMAND that all take a
bulb change test in order to fulfill the traditions of amateur lightbulb
changing.

13 unlicensed lightbulb changers stating that civilians change light
bulbs all the time and don't need licenses to do so.

69 incensed licensed lightbulb changers calling the unlicensed
"LB-plussers" or "change lite."

52 licensed changers denouncing the new organization called
"NCI" or No-Change International.

1 with Masters papers in sea-changing contemporaneously
developing a proposal for new federal laws on light bulb chaning.

1 who always wears a uniform of some sort with many insigina
demands instant obediance to strict lightbulb change rules.

1 who never changed a light bulb in his life but has many degrees
to show he can and who will immediately misdirect conversation
into something not about lightbulb changing.

1 who has 26 patents on lightbulb changing and once changed a
light bulb for naval intelligence.

1 female who adamantly demands that all show their references for
any opinion on changing lightbulbs.

1 other female who never needs lightbulbs due to the glow of her
inner self giving all illumination necessary...except that hardly
anyone can see what she is glowing about.

1 paraillumination logistics maintenance NCO who extolls the ONLY way to change light bulbs is to do as he did and become one with the divinity for accomplishment of rapid changing.

1 officious former government employee who states that unlicensed light bulb changers have no business commenting on amateur light bulb changing. Ever. They are never involved.

6 adolescent-minded to state offensive remarks about "screwing in light bulbs."

107 other parental surrogates to remind the 9 adolescent-minded to behave, become licensed light bulb changers, or be grounded.

963 incensed, angry parental surrogates denouncing one another in a spin-off thread stating that others are "virgin changers," unfaithful, incapable of changing, would not know which direction to take in screwing, in or out, and never changed in their lives.

8 official statements from the northeast American Bulb Change League (ABCL) stating that they are the only organization representing amateur light bulb changers...and demanding BPL (Bulbchange Power for Light) be abolished due to bulb noise.

Why? It's my understanding that the 10-year idea is based partly on the current
license term and partly on the idea that we don't want to force anyone out
because of "life happens" events like education and family.

Why would that be strange? It's the rule *today*.

Back in the late '60s and early '70s, there were *four* FD power levels: QRP,
50 W, 150 W, and the legal limit, IIRC.

The problem is that it takes years and years to develop a new field. And most
new fields are not easily accessible.

Ultimately the answer is to get away frok nonrenewable sources, and to increase
efficiency. But such things are a hard sell.

The inflation-adjusted US price of gasoline today is *less* than at almost any
time since the end of WW2.

Its just too long. The license renewal period would just be another
number by that time, since the new A license would be forever. I'm busy
as all gitout, and it took me something over a week of hard study to get
ready for the Extra.

Plus I can't figure out what can make a person qualified to operate on
day 3652 of their licensing period and unqualified on day 3653. It takes
a lot less time than that to understand RF safety - the only real reason
I can think of for the second class license, so if we're going to do
this, it should make some timing sense.

>> I support a time in grade, even though I would be frustrated (read
>>teased) by a two year stint before I could get the class A.

>>op at field day (or operate lower power)
>>
>
> Why would that be strange? It's the rule *today*.

I keep drawing parallels between the second class license and Generals.
We try to get people out to operate on field day, and you can get some
pretty strange setups. First a Ham with less than 2 years time in grade
would have to have a control op. We have hams what operate now at field
day that would suddenly have to have a control op (therefore taking
myself or another Extra away from a station) Of course the second class
ham could operate a 50 watt or less station, but that would mean that

either we change our setup - all stations except GOTA are full output -
or set up a special station just for the second class hams, a sort of
low power ghetto. Heck, the GOTA station can run more power. Maybe this
is no problem for you, but for others it isn't so good

> Back in the late '60s and early '70s, there were *four* FD power levels: QRP,
> 50 W, 150 W, and the legal limit, IIRC.

Could be. But if we went back to that, the clubs could be forced to
make a decision to either run what they would like to run, take control
ops away from available stations for those who don't have time in grade.
(or the proper upgrade) or make that little ghetto for the second class
Hams. I really don't think that is a good way to welcome new people. YMMV.

Exactly! That's what I mean by "open-door" - they let lots of folks in and then
don;t check to see what they're really doing.

>> How did the 9/11 terrorists get into the USA?
>
>On student visas

See above.

This also illustrates one of the conflicts in the way the US economy operates.
Colleges and universities *love* student visas, because foreigners studying in
the USA usually pay cash and help with the institution's need for "diversity".
Such students also help the trade deficit - and considering what a US degree
costs, we're talking serious hard currency per student. So there's pressure to
admit as many cash-paying foreign students as possible.

And the vast majority of them are hard-working, intelligent students whose
purpose in the USA is exactly what they say it is: to get an education.
>

Friend of mine wrote her chemical engineering master's thesis on a new
shale-oil extraction process back in 1980. Her method was an entirely practical
and efficient way of deriving oil from the type of shale found in abundance in
parts of the USA. Clean, too.

Only problem was that the recovered product cost about $45/barrel.

Yes and no. WW2 ended 58 years ago. Some things are different now. And there were also colossal expensive failures and overruns as well as the well-known successes like the A bomb (which was only ready in the summer of 1945), radar and the proximity fuse.

That's part of it, but the real problem is the kind of mindset it requires. Many Americans don't like to think in terms of any sort of limits or long-term responsibility or planning. Look at the battle it took to get seat belts in cars, and how many Americans won't use them.

73 de Jim, N2EY

> Look at the battle it took to get seat belts in
> cars, and how many Americans won't use them.

Another example of the Great Dumbing Down of America.

The world is methodically being dumbed down by government efforts to protect us from stupid people.

Stupid drivers don't recognize the dangers of speed, so they drive too fast and kill themselves. The government regulates speed, so now more stupid people survive.

Stupid automobile passengers get killed because they don't buckle their seat belts. Government steps in and makes seat belt usage mandatory, so now more stupid people survive.

Stupid pedestrians don't know enough to not step out into a busy street, so they get injured and killed trying to cross the street. The government makes laws giving them the right-of-way, so now more stupid people survive.

Stupid parents don't recognize the value of childhood inoculations. The government makes them vaccinate their children before entering school, so now more stupid people survive.

Stupid hams don't know enough to keep their fingers out of 3KV plate transformers, so they get fried in their own juice. Some would have the government protect them, and more stupid people would survive.

In the ways of Mother Nature, stupidity was kept in check because stupid people generally didn't survive to breeding age, thus our species tended to get smarter over time.

But stupidity begets stupidity, so we are being overwhelmed by a tsunami of stupidity. The tsunami is triggered by the government protection of stupid people, which allows them to survive to reproduce.

Ergo, less government regulations makes a smarter populace.

Wow. I wonder how many you would have worked on 160 with that antenna
if you had been using ssb?

I think that is one of the things that may dissapoint new hams that may
when the CW requirement is gone, (which I have predicted to happen about
the bottom of the sunspot cycle) and they get on the air, and they don't
do a whole lot after that? They will wonder what all the hubub was about.

Whereas you worked a lot of the US with an antenna that by all rights
shouldn't work much at all!

It would not have worked well for sideband (although I have worked PA on ssb
on it) as it is too low to the ground and the background noise on 160m is
often high. I worked 4 hours Friday night and 4 hours Saturday night doing
the "hunt and pounce" approach. This doesn't net a lot of stations but you
find some interesting ones. Altogether I worked 104 stations in a total of
8 hours. The one I wonder about is where a person on Long Island finds room
for a 160m antenna!

Not the same since there are distinct privileges with those licenses
which differentiate them from the others. IF the FCC had made Advanced
privileges exactly the same as Extra, then I fully believe they would have
just changed all Advanced to Extra when they were individually
renewed.

so is that:

Low speed - 0 up to 5 wpm
Medium - 5 wpm up to 12 wpm
High - 12 to 20

just curious where the 30wpm folks would then operate.

Cheers,

Hans,

I have to agree with you! How did we survive the '50s,
even the '70s without socialists like Hilary Clinton "protecting" us from
ourselves? We misbehaved, we got
paddled by a teacher and Dad gave you a "whuppin'" when you got home! GASP!!
HORRORS! We rode our
bicycles and didn't know what helmets were? You're KIDDING! We climbed
trees, fell out, had the breath knocked out of us, got up and kept going.
HUH? Why,
we'll have to make trees illegal!! We sent each other flying high in the
air by jumping on a short plank in a modified game of see-saw; sometimes the
plank skewed
to one side and we broke arms and ribs. Let's SUE somebody! We got up again
with skinned knees, and when it quit smarting, we got back on the board and
did it again. In high school, we drove school busses at 16!
WHAAAAAAAAAAT??????? We even had bus drivers' club! What, that's CRAZY! No
it wasn't. At that time, North Carolina had one of the safest school
bus driver programs in the nation! We drove tractors as
soon as we could reach the pedals and Pop-popped (John Deere) our way down
the highway with no supervi-
sion going from one field to another. YIKES!! We drove farm pickups (off
road) as soon as we could shift
gears, too! HORRORS! GASP! CALL THE LIBERALS! We expect to remain
free, yet we quietly
surrender our rights to the left wingers who represent one
of the greatest threats next to our external enemies. That is because it is
creeping socialism" and slips up on us one right at a time. Like the
seatbelt issue, the liberals couch their agenda in issues that seem to "be
for the good of all".
They know that they cannot suddenly, for example, take
away guns (well, there's that pesky Constition thing they'd
like to get rid of); it would set off a rebellion. They know
that their dangerous agenda can be met if they use issues
that to seem to be "good"----like saving lives with laws such as seat belt
laws.

The thing is, seat belts DO save lives in the majority if cases. And I am
all in favor of them; I never start my
car without putting mine on. BUT! I don't like the idea
of some el-pinko, bleeding heart, drippy hippy relic from
1968 in wire-rimmed glasses telling me what to do, nor do I like it, or

think it should be a law.

We have too many laws now. Down with the Hillary Clintons!!!! LOL!

From 1951 till 1968 the privileges for four license classes, Conditional, General, Advanced, and Extra were all exactly the same. We all used the same frequencies with the same authorized power, and from our call sign you couldn't tell one from the other. Life was good.

Then some dump huck social-engineering gummint dudes, cheered on by a radio club in West Hartford, CT., decided to set up a bunch of arbitrary exclusive band segments as 'rewards' for advancing amongst the various classes, and then later drove wider wedges between the classes with the 'reward' of distinctive call signs for the higher licenses. Whatever good came of this is long since lost in the damage caused by 'class wars' which still rage.

My proposal is based first on the notion that there should be two classes of license --- "Learners Permit" and "Fully Qualified", and second on the notion that those learners should operate in the mainstream with experienced hams, not segregated off into little ghettos populated with mostly other learners.

hehe, try telling that to some of the r.r.a.antenns group! Of course the guru's there are operating in rarified atmosphere. (no disrespect, there are some mighty knowledgeable people there - it's just that a person can start a thread, and the first one or two answers answer the problem, then the thread turns into a antenna minutae free for all. Hmm sounds familiar!!

You bring back a lot of memories Jer. A poppin Johnny was the first
thing I learned to drive 10 years before I would be old enough for a
drivers license, that hand clutch really made it easy. Ever start it up
without removing the tin can off the exhaust stack first?

We used to take guns to school. Hear that anti-gun liberal nuts, yes,
real guns at school. Even carried them on the school bus. We never had
any thoughts of shooting up the school, and certainly no thoughts of
shooting someone. We would leave our rifles in the prinipal's office

until after school, then walk home through the fields and pastures
looking for varmits to shoot.

Sorry I missed you, but Michigan was well represented. We only operated for about 2 hours, so our score is just over 10,000. Heard W4NTI at about esp-level, but QSB was bad, so I didn't try to call him. I wonder who was operating KV4FZ --- pretty sure it wasn't Herb, because the operator was really stumbling.

Getting ready for the 10M contest next. K0CKB and I will do a sort of multi/multi split between A1 and A3.

You're not going to let it go, are you, Dee? I said what I believe to be fact. Lacking any real data, that is all I could possibly do.

I based that on the fact that Morse code has been widely featured in movies (Titantic to War Movies), television (Hogan's Heros to Westerns to Sci-Fi), books, children's toys, the military decades ago, youth organizations, and so on. So, again, I do think it is a fact that most people in this country today know about Morse code. They may not know what it's called, how to do it, or whatever, but only a truly isolated person would not know at least something about it. That is especially true for anyone interested in radio (shortwave listeners, potential new hams, and so on).

You haven't provided anything beyond your own opinion to dispute any of that. Instead, you assault my choice of words and then insist, even if true, that is not enough - that one must have practical experience to truly make a choice. Of course, that's nonsense. One does not have to murder someone to know that murder is not something one would particularly like to do. Indeed, we make choices in our lives each day without personal experience to back it up. Your demand for more here shows a serious lack of respect for people's ability to make their own choices.

> Sure there is. Here it is, though you may argue that it doesn't hold much
water
> today:
>

In addition, anyone one who thinks they took the code tests to get phone subbands isn't really viewing it from the right perspective anyway. The code test, as well as the additional writtens, was to get HF privileges or should have been. It happens that phone privileges are included when one earns HF privileges.

Dee D. Flint, N8UZE
::::::::::

Now to counter Dee on the point that she made, where she essentially states to you that you presented something as fact (which isn't exactly clear that you did...by the way; she *interpreted* something you said as fact), then there's a lot to be said for her needing to present "statistical data" to show that anyone--*anyone*--who took the code test...was to get HF privileges. Now, in defense of her statement, she did qualify that statement with the phrase, "or should have been." But, the qualifier does not negate that she emphatically states "anyone who thinks they took the code tests to get phone subbands isn't really viewing it from the right perspective anyway." The implication between the conclusion that is derived from the two combined statements is that Dee is--we could say, as she has done with you--stating that it is a fact that anyone who takes the code test did so to get HF privileges. Period.

Where's *that* statistical data?

This could be done over and over. So, in true debate form--at least as far as I see it--the counter would be to fight fire with fire.

Fact is, though, you did open yourself up with the statement, "Few people today (especially boys and men) have not learned code, or at least played around with it, at some point in their lives." I mean, after all, you have

to see that such a statement would tend to be disagreed with. I would disagree with it, wholeheartedly, if I was inclined to nitpick--or if I was inclined to feel like I had nothing else to argue. It's a statement that is quite arguable. There are not many people who have "learned code" as you say. That's, uh, not a fact by the way.

So, again, I do think it is a fact that most >people in this country today know about Morse code.

Well, I simply disagree. Most people in the USA don't really know what Morse code is.

btw, the 1997 James Cameron film had no significant Morse code in it at all. Nor any real mention of the role played by radio. You have to see the 1956 flick "A Night To Remember" for that.

>They may not know what
>it's called, how to do it, or whatever, but only a truly isolated person >would not know at least something about it.

If they do't even know what it's called, they can hardly make an informed judgement about it.

>That is especially true for
>anyone interested in radio (shortwave listeners, potential new hams, and so >on).

Not from what I've seen whenever I've demonstrated Morse code.

>
>From 1951 till 1968 the privileges for four license classes, Conditional,
>General, Advanced, and Extra were all exactly the same.

No, that's not exactly correct.

The period described started in February of 1953, not 1951.

Before then, hams needed an Extra or Advanced to use 'phone on the HF bands between 3 and 25 MHz. This is one reason 10 meter 'phone was so popular.

More important, however, is the fact that the basic concept of "incentives" wasn't a new '60s idea, but a rehash of a much older practice from at least the 1930s. Except that the 1930s version had only two levels (Class B/Class A) and was by mode, not subband.

>We all used the
>same frequencies with the same authorized power, and from our call sign you
>couldn't tell one from the other.

You could, however, usually tell the oldtimers from the newbies by the license class, but that was about all. Except that there was a very limited program where hams could get specific callsigns.

All of which was only done after over 5 years of debate and discussion. I think the whole thing was a case of "Sputnik fever" by those guvmint dudes, who had seen one too many hamshacks owned by QCAO charter members.

Hans has only submitted his proposal as a comment to others' petitions.

He can take the discussion here, and the answers he's given, revise the proposal into a petition and submit it to FCC for an RM number.

Even though I disagree with some parts of it, and would oppose those parts, I think his proposal has been much improved and clarified by the discussion here.

The end result could be something that FCC and much of the amateur commnunity would support.

>> because of "life happens" events like education and family.
>
> Its just too long.

Is it really too long, particularly considering the two-year experience
requirement?

One of the problems with the old 1 and 2 year Novices was that if a new ham ran
into "life happens" situations, their upgrade schedule would be seriously
disprupted.

Example: A few weeks after a teenager gets the Novice license his folks inform
him that the family is moving across the country. New house isn't quite ready
so they'll be living in temporary quarters for a while. Meanwhile most of their
stuff is in storage. "A while" becomes "a few months"..

Finally they get into the new house and there's a flurry of activity to get set
up - and the parents say ham radio isn't a top priority. By the time Our Hero
is back on the air, there's not much time left on his one-year license.

Look how long it's taken some *adults* (alleged adults, anyway) in this NG to
upgrade, or even get licenses.

>The license renewal period would just be another
>number by that time, since the new A license would be forever. I'm busy
>as all gitout, and it took me something over a week of hard study to get
>ready for the Extra.

Very true!
>
>Plus I can't figure out what can make a person qualified to operate on
>day 3652 of their licensing period and unqualified on day 3653.

The same principle that makes a General or Advanced class ham qualfied to
operate on 3526 kHz but not on 3524 kHz.

The same principle that makes a Tech Plus ham qualified to operate a transmitter of 1500 W output using any authorized mode on 6 meters but not 10 meters.

>It takes
>a lot less time than that to understand RF safety - the only real reason
>I can think of for the second class license, so if we're going to do
>this, it should make some timing sense.

There's a lot more to it than RF safety.

>I keep drawing parallels between the second class license and Generals.
>We try to get people out to operate on field day, and you can get some
>pretty strange setups. First a Ham with less than 2 years time in grade
>would have to have a control op.

Why?

As long as the power level is less than 50 W, that Class B ham could operate any freq, any mode, as the control op.

>We have hams what operate now at field
>day that would suddenly have to have a control op (therefore taking
>myself or another Extra away from a station)

Not at all! Existing hams would retain their existing privs under Hans' proposal.

>Of course the second class
>ham could operate a 50 watt or less station, but that would mean that
>either we change our setup - all stations except GOTA are full output -
>or set up a special station just for the second class hams, a sort of
>low power ghetto.

You mean you folks operate 1500 W on FD? (that's "full output")

>Heck, the GOTA station can run more power. Maybe this
>is no problem for you, but for others it isn't so good
>

Try QRP some time ;-)

The fact is that if a non-Extra wants to operate FD, there has to be a control op present whenever the non-Extra exceeds his-her subband restrictions. That's a lot more onerous than turning down the power to 50 W.

>> Back in the late '60s and early '70s, there were *four* FD power levels:
>> QRP, 50 W, 150 W, and the legal limit, IIRC.
>
> Could be. But if we went back to that, the clubs could be forced to

>ops away from available stations for those who don't have time in grade.
>(or the proper upgrade) or make that little ghetto for the second class
>Hams. I really don't think that is a good way to welcome new people. YMMV.
>
There's another option: Change the rules so that different power levels could be used for different stations in the same multi setup. (It used to be this way!)

In fact, these changes should be done anyway. Right now there are three power levels on FD:

"QRP/battery", which requires 5 W or less output *and* non-generator power, (multiplier 5)

"Low power" which allows up to 150 W and requires a power source independent of mains (multiplier 2)

"High Power" (multiplier 1)

Multi transmitter setups are categorized at the power level of the *highest power* transmitter.

I'd do it this way:

"QRP", would require 10 W or less output (multiplier 5) and a power source independent of mains

"Low Power" would would allow up to 50 W and requires a power source independent of mains (multiplier 3.5)

"Medium power" would allow up to 200 W and requires a power source independent of mains (multiplier 2)

"High Power" (multiplier 1)

"Battery" multiplier (instead of a weenie 100 point bonus) for non-fossil-fuel energy sources

Multi transmitter setups would be categorized at the power level of the *highest power* transmitter but scored by the transmitters actually used on each band/mode. So 40 CW might run Low while 40 phone ran High, etc.

It used to be that way - and it was a good thing!

(Yes, I've suggested this to ARRL)

It seems that a major objection to the 50 watt rule is based on the fact that there aren't a lot of 50 watt rigs for sale today. That's a pretty sad commentary on the technical state of things, I think.

>
> - Mike KB3EIA -

Wow, as a newbie I had EXACTLY the opposite experience.

I was a Novice and could hardly hear or work anyone on CW. After
upgrading to Tech, I was talked in to cutting my 40M dipole down to
10M (because I upgraded about the same time as the Novice Enhancement
came along), and got on 10M SSB. WOWEE!!! That was what all the
hubub was about!

And my 10M antenna was tied off to a crabapple tree at 8', and the
other end was tied off to the gutter at about 12'.

Yup, CW gets through when everything else will - sometimes.

Brian

Yep, national security is hard to do with alternatives. For example,
it would be difficult for the DoD to build stealth fighters that run
on nicads, charged by the sun.

But the rest of us could get along fine with alternatives.

1 incensed licensed lightbulb changer who complains that "they're"
just giving light bulbs away.

license
> class, but that was about all.

Unless someone told you their license class, there was no way of knowing.
There was no 'QRZ.COM' to go check, the CallBook didn't show license class,
and all you could tell by their call sign was where their station was
located. We all played together in the ether as equals.

Oddly enough, Japan hasn't changed a thing, even though Japan has been the
poster country for no-code-test HF licenses.

The number of Japanese hams is dropping like a stone, judged by the number of
station licenses.

OK, fine.

Then, what special knowledge is imparted by being able to pass the General and Extra class written tests that is a minimum qualification for the privileges granted by those licenses *and* is not tested adequately by the Technician test?

For example, the difference between being qualified to operate SSB on 20 meters vs. 2 meters?

What difference was there between a 1953 Technician written test, and a 1953 General written test? Nothing, of course. They were exactly the same examination.

But the 1953 General could beep 8WPM faster than the Tech. This 8WPM qualified them to operate on 2-meters where the Tech had no privileges in 1953. Novices of that era also beeped at 8WPM less than a General, but they *could* operate on 2-meters, and on 3 HF bands closed to Tech's. Didn't make any sense then --- still doesn't.

My point? All these arbitrary differences in operating privileges are just that --- arbitrary, based mostly on a misguided agenda of 'social engineering' by the regulators.

Is that sentence what this is all about, Kim (and Dee)? If so, lets forget about debate rules and discuss how to write instead. I wrote a paragraph which contained a lead, supposition or hypothesis, and a conclusion. The "fact" mentioned in the lead of that paragraph is in the conclusion of that paragraph, not in any single sentence leading up to that conclusion. The sentence quoted above is supposition leading to the conclusion. The conclusion of that paragraph, and the "fact" mentioned in the lead of that paragraph, is, "...most adults today are familiar enough with code to know whether they have any real interest in it." Based on what I wrote in that paragraph, and in subsequent messages, I do believe that conclusion to be fact.

And the conclusion of this message is, if that sentence is indeed the root Dee's objection, we've spent several days arguing over two entirely different things - that sentence in Dee's case and the overall conclusion in my case.

How can you say that, Jim? As I said, Morse code has been shown in some form or another in perhaps several hundred movies, television shows, and news broadcasts, over the last forty or fifty years. One would almost have to live in a cave without electric power to have not heard code at least several times and not know it is sent with a key (telegraph or other). Because of that, I think it is absurd to suggest that most don't know what Morse code is. They may not know the details, but they most certainly do know what it is.

> If they do't even know what it's called, they can
> hardly make an informed judgement about it.

Why do they have to know what something is called to make an informed judgement about it? I may not know what a certain crane is called (or how it works), but can still make an informed judgement not to stand under any load that crane may be moving.

> > That is especially true for anyone interested in radio
> > (shortwave listeners, potential new hams, and so
> > on).
>
> Not from what I've seen whenever I've demonstrated

What are you basing that conclusion on? I don't doubt that those people didn't know how to send code, but you'll never convince me that they didn't even know what Morse code was.

I disagree. For the reasons already stated, most specifically that the proposal doesn't serve a need not already addressed in the current licensing system, I don't think the FCC would have any interest at all in his proposal. When you consider the amount of changes needed to implement the proposal (rule changes, licensing procedures, and so on), I suspect the FCC would be dead set against it.

I suppose that depends on what 'is' really is.

If I walk up to 100 random people over the age of 10 in a shopping mall and ask them "what is the Morse code", I'm sure every one them would give me an answer. You'd get answers like:

"The alphabet in dots and dashes".
"Those clicks they used to send telegrams in the cowboy movies."
"SOS"
"Those beeps and boops I used to hear on my SW receiver."
"A barrier to entry into HF amateur radio." [The devil made me say that.]
etc., etc., etc.

My point is that most people in the USA have at least a passing familiarity with *what* Morse code is, even if they can't recite the code for each letter/numeral.

Here is something you can use in your life Brian;

It takes two things to communicate, an operator at both ends.

Everything will radiate, its the degree of effeciency thereof.

Have a nice day.

NTI (No Theory International) at work in the background.

If this is a surprise to anyone, you only need examine the 'gang of four' who is responsible for the question pools. This has the fingerprints of W5YI smeared all over it. He has stated publicly that he feels that since people who acquire entry level ham tickets invariably purchase their equipment assembled these days, and send them in for repairs when broken, they no longer need to possess theknowledge needed to build their own stations, nor the knowledge to determine if their repairs/adjustments result in proper on-the-air signals. Because of this fact, he thinks that the majority of questions regarding math and theory (knowledge mainly needed to build/repair/adjust equipment) should be removed from qualification tests, and simply replaced with questions on operating technique and regulations. If he had his way, math and theory questions would only be part of Amateur Extra examinations.

Note that America != world, though I've heard a foreign stereotype
of Americans which suggest that Americans might not always remember this.

>But stupidity begets stupidity, so we are being overwhelmed by a tsunami of
>stupidity. The tsunami is triggered by the government protection of stupid
>people, which allows them to survive to reproduce.
>
>Ergo, less government regulations makes a smarter populace.

While in the past I wouldn't have agreed with this at all, I've heard a
stereotype joke about Americans repeated enough in, of all places, China,
that I'm now not so sure there isn't something to it.

China has a lot of traveller-beware tourist attractions. An example I've
seen is a path dug into the side of a sheer cliff from which the views
are stunning, but which requires one to walk through sections of path
which are 18 inches wide, without an outside railing, over a sheer
drop. Lots of Chinese go. Some take a look and decide they aren't
up to it, but others decide its okay and head up to see the view. Probably
a quarter million Chinese people a year go up to take a look without
a mishap.

The joke I've heard (with respect to myself in fact; this may contribute
a bit to the popularity of sewing Canadian flags on one's backpack and
clothing), however, is that if Americans go up no one wants to stand too
close since, if you send a group of a dozen Americans up, one is sure to
go over the side.

I have no idea what occurance inspired the joke but I know in China
people are almost viserally aware that no one has responsibility for their
safety and well-being other than themselves, and so might have some
difficulty understanding the behaviour of people who assume someone else
is taking care of this for them.

I don't agree there Jim! True enough, its an arbitrary thing, but what
you are talking about is power limits and sub-bands, and I am talking
about the qualifications to operate *at all*. the other folks simply
operate within the limitations of their licenses, and the 10 year and 1
day class B ham is no ham at all anymore.

> any freq, any mode, as the control op.

Ahh, but now we have to set up a special low power station. The low
power ghetto I was talking about. For good or bad, my club runs high
power during Field Day. I'm taking my reference of "Class B Ghetto" from
experience with the GOTA station. The first year our GOTA station
operated, many of the people operating it called it a "toy station".
They could op one of the high power stations, park on a frequency, and
rack up points, and the lowly GOTA station has to hunt and pounce. It
wasn't until I put PSK31 on the GOTA station that it took off.

note: I'm not suggesting that newbies use high power. Just the opposite
in fact. Hunt and pounce at low power builds competence in the new ham.
But its so hard to compete with power when you're working like crazy to
get a QSO, and the guy in the next tent is racking them up at a high rate.

>>We have hams what operate now at field
>>day that would suddenly have to have a control op (therefore taking
>>myself or another Extra away from a station)
>
>

I'm saying that I'm sitting with the guy as a control op and not
operating myself.

>
>>Of course the second class
>>ham could operate a 50 watt or less station, but that would mean that

>
>
> You mean you folks operate 1500 W on FD? (that's "full output")

Actually we operat @1kW. My bad.

>>Heck, the GOTA station can run more power. Maybe this
>>is no problem for you, but for others it isn't so good
>>
>
> Try QRP some time ;-)

Nothing wrong with QRP. I'm just noting possible problems as outlined
above. If you're going QRP then everyone is operating at less than 5 watts.

> The fact is that if a non-Extra wants to operate FD, there has to be a control
> op present whenever the non-Extra exceeds his-her subband restrictions. That's
> a lot more onerous than turning down the power to 50 W.

I stayed in my bands when I was a General at FD. Wasn't a problem.

>>>Back in the late '60s and early '70s, there were *four* FD power levels:
>>>QRP, 50 W, 150 W, and the legal limit, IIRC.

>>(or the proper upgrade) or make that little ghetto for the second class
>>Hams. I really don't think that is a good way to welcome new people. YMMV.
>>
>
> There's another option: Change the rules so that different power levels could
> be used for different stations in the same multi setup. (It used to be this
> way!)

This might work well enough, but I still don't care for relegating the
class B to the ghetto, or to remove an Extra or class A from operating
to be a control op.

I know that the others I work with on field day wouldn't be too wild
about that sort of thing either. These are people that love working high
power, and enjoy racking up points. Inexperienced users can get working
with us, but adding another station (and putting us in another class)
for a 50 watt station isn't going to be too popular with them - and
after all, they and myself are the ones doing the setup and teardown, so
as long as we are within the rules, we should be allowed to do this. I
just don't think that the proposed setup will be both newbie friendly
and experienced friendly at the same time.

Note I'm not saying things couldn't work. I'm saying that every time I
turn around, this proposal is bumping into something else, and not
necessarily in a good way. It starts out prety simply, but then we have
to do all kinds of things to shoehorn it into the real world. So we end
up changing this so can coexist with the thing we changed before in
order to avoid messing that up which came about as a result of modifying
the rule that contradicted.....

No you don't. At worst you need to put a wattmeter in the transmission line, and maybe a neon-orange sign reading "Observe the power limits of your operators license." with an arrow pointing to the "Pwr" knob on the radio.

And I long for those days that will never come back. I just wish my
daughter could see how happy and (WHAT?) free we were We wore the same
clothes until they couldn't be patched anymore. Were we poor? Moneywise,
yes. But we didn't KNOW we were poor.
We farmed, raised our own vegetables, chickens. What
we didn't need for the root cellar, Mom canned and put up for the winter.
We picked blackberries and made jelly for sweets, or Mom made cakes or
cookies from scratch.
For a treat, she would bake yeast rolls----MMMMMM!
You could smell them at the back of the garden and out to the wheat field.
We sold eggs we didn't use ourselves
with a route in town, and frequented the farmers' market.

We knew nothing about pocket games. Computers were something that we
couldn't imagine except those huge Unix things with the multiple tape reels
seen on our black and white TVs. We couldn't believe it when we heard about
Sputnik Do you remember the International Geo-
physical Year?

Toys? We got a few things at Christmas, the rest we scrounged up wheels and
steering wheels to make "go" carts that coasted down the highway--YES! It
was the highway, or rural route, dodging cars or running in the ditch if
they got too close. We carried pocket knives and thought nothing of it! It
was a rite of passage for boys with which we carved whistles--which, in
turn, were confiscated by the teachers who spied them. Which, in turn, we
made more whistles, which.....you know! NO one ever thought about
shooting anyone. We boys had arguments and met out behind the ball field
and duked it out. Afterwards we pouted at our opponents, and gradually
started speaking again. Dads taught their kids how USE a gun, when, where,
and why. Not to murder someone. Never, never, never point a gun at anyone
unless you meant to use it. By 5th grade, I was moving Dad's guns around
the house, FIRST making sure there was no round in the chamber. I was taught
when hunting to break down your shotgun and carry it that way until you

intended to shoot at that prey, or keep the safety on at all times. Because Dad took the time to teach me to respect the power of a gun and to NEVER become careless, I never had an accident, and to this day, if I pick up my Dad's old shotgun, the FIRST thing I do is to break it down and check to see there is no shell in there. Now kids have to have police roaming the halls and metal detectors. A girl somewhere was expelled (an honor student) because she unthinkingly brought a knife to school as part of a school science project. What has become of us? And the older kids make fun of us for being "old fashioned". Give back the school's authority to discipline kids (yes, corporal), stop dumbing down education, and kick out the liberals that are slowly ruining this country.

The poppin' Johns? Oh, yeah! Every year, I go to at least one "Old Time Threshing" convention in my state
just to hear that sound.

> ability to make their own choices.
>
>

Again you are NOT reading my words. I've repeatedly stated that one can
make judgments based on risks, dangers, and harm even if they have not
experienced it. Murder does serious harm and therefore does not need to be
experienced. However where such detrimental effects don't come into play,
it is not possible to say one does or does not like something unless they
have experienced it. One may think they won't like it but they truly do not
have the tools to do other than make an assumption.

I refrain from forming opinions on things I've never tried. There will be
things that I will never form an opinion on. For example my fear of the
risks of skydiving will never allow me to try it. So I do not know whether
I would like it or not and refrain from making a judgment on it. I've never
had occasion to eat frog legs or squid so I refrain from judging whether or

not I would like these foods. And so on.

I would pick 13wpm as that is the speed that once a person has attained it,
the code will stay with them and not be forgotten. They may get rusty but
are unlikely to forget. This is discussed in the book "The Art & Skill of
Radiotelegraphy."

While I cannot speak for someone else, I would reword that to say that simple diagrams and a few questions in a license test is not going to prepare someone to build or repair the complex radio equipment used by most Amateurs today. To build such equipment, one would almost need an engineering degree and a labortory full of equipment. Anything beyond the most basic repairs would require considerable experience and a significant investment in equipment. So, in my opinion, instead of trying to meet that, the tests today serve as a basic introduction to electronics to both allow those basic repairs and encourage some to seek real electronics training elsewhere.

BS, the test today do nothing of the sort, all these stupid test do anymore is test someones ability to Memorize a Bunch of Q and As.

I'd agree with that in general principle. But it strikes me that the ability to recognize the symbols for various electronic components in a simple schmatic and to be able to navigate an elementary block diagram would be essential to even the most elementary troubleshooting and repair tasks that we'd expect a General class amateur to be able to accomplish.

Don't be too generous with your praise, Mike. Len's never actually changed a lightbulb or owned a lightbulb but he has several friends who are lightbulb changers and fifty years ago, he worked in the sunlight. These things are enough to make him an expert in lighting technology and to lecture all licensed lightbulb changers.

> weekend.

The Boring Amateur Radio Club would like to thank the ARRL for
recently completing the warm up competition for the 8th running of the
Stew Perry TopBand Challenge which will rock the ionosphere Dec. 27-28.

The rules may be perused at:
http://www.jzap.com/k7rat/stew.html

Now you know which hardware improvements/adjustments/renovations
should be done to optimize your unique situation...or not. Anybody from
hard-core icons of TopBand wizardry to the Newbie who just found out the
radio has a spot next to that big dial that says 1.8 can make a few or a
lot of Q's.

Recognition for Participants come from the competitors themselves
by sponsoring plaques for situations that they feel are important. The
donor Stalwarts and categories already spoken for are listed below:
Sponsor Category
KL7RA Top QSO Total
K1PX Top Score, Single Op, Europe, Low Power
VK6VZ Top Score using Home-brew gear (VK5AX memorial-winner
receives RFDS Cap)
WA9IRV Top Score by Operator of own Station in
VE3,VE4,MN,WI,ND
N5IA Most Grid Squares worked
N5UL Top Score, Single Op, Low Power
Horned Toad Wireless Top Score, Single Op, Low Power, Rest of World
W7GG Top Score, Single Op, QRP
BARC Top Score by a Plaque Donor

You want immortality? You want fame? You see a category that needs
channeling through you for expression in the TopBand world? Then simply
commit to spend $50.00 and impart that idea to me. First come....first
spoken for...first get! Several Stalwarts are pondering their categories
as we speak so decide upon one and e-mail me directly. This Contest is
what we all make it...and we all make it fun. The plaques from the 2002
event have all been sent out and should be arriving at the plaque
winners QTH's currently.

73 and I remain,
Lew W7EW/W7AT

I trust them more. I never did foresee a nuclear war between us.
The true threat has been from some upstart trying to be the new kid
on the block or someone looking to drive a wedge between us and the
Russians.

> >So let's spend our money where it's appreciated.
>
> Sure.
>
> But perhaps we should also consider reducing our dependence on imported energy.

I'd agree with that, but getting the rest of America to is a
problem. We've had the technology to exploit many non-petroleum or
hybrid petroleum alternatives for decades. And even where there are
other US-controlled petro reserves, we ahve our own people fighting
our attempts to recover them.

Of course, that's just an opinion, isn't it? You're not an expert on the human decision making process and there are no studies to show whether it is or isn't sufficient, right? If not, your opinion is no more valid than mine.

> Again you are NOT reading my words.

Again, we make decisions each day without personal experience to necessarily back it up. This includes who we associate with, who we date, what we eat for lunch, what books we buy, what shows we watch on television, whether we marry, and the list goes on virtually forever. And, again, your demand for more here shows a serious lack of respect for people's ability to make their own choices.

> I refrain from forming opinions on things
> I've never tried. There will be things that
> I will never form an opinion on. (snip)

I find that very difficult to believe, Dee. Did you try actual marrage before actually getting married? Did you try driving on the highway before deciding to get a license? Did you try your job before actually taking it? Again, there are many things we choose to do or not do without actually trying them first.

I don't think he was refering to the religious context of the word. Instead, I suspect he was referring to "saving someone from an unpleasant situation." The "unpleasent situation" in this case being the Navy itself. Now, before someone jumps on me, let me point out that I'm only explaining what I think he's saying. I have no desire to engage in inter-service rivalries.

How many symbols are there now, Hans? A hundred or more? How much can we include in the license tests before they become massive in size and overwhelming in nature? We have to draw a line somewhere on what to include and I'm satisfied with where that line is drawn now. By the way, the Technician question pool I studied (July 97 ~ June 01 pool) did include some simple block diagrams (transmitter and receiver), basic symbols (resisters, capacitors, and so on), and even a couple of simple schematics. One certainly couldn't build anything with that, but it was a good introduction.

Source record: 83598

See http://www.tvtechnology.com/dlrf/one.php?id=259

"Corridor Systems sent an Open letter to the FCC <http://www.corridor.biz/031201-fcc-letter.pdf> regarding ARRL's opposition to BPL. In the letter, Glenn Elmore, Chief Technology Officer, who also holds Amateur Radio call sign N6GN, said, "Corridor Systems has demonstrated a BPL technology which is completely compatible with the Amateur Radio Service and, indeed, with all users of the HF-VHF spectrum, one which can be operated completely within Part 15 guidelines, is compatible with other services and is an excellent cohabitant of the public spectrum." During the 216 Mbps BPL test using 2.4 GHz and 5.3 GHz ISM/Part 15 spectrum, the letter said "Corridor Systems demonstrated normal system operation, maintaining high dynamic range, in spite of the presence of a high-level, 2.4 GHz fixed wireless transmitter located approximately 1/2 mile and within line-of-sight of the BPL system and sharing common spectrum."

"These results indicate there is no reason for the FCC to allow high frequency based broadband over power line systems when an alternative exists that offers greater bandwidth and no threat to existing HF, VHF and UHF spectrum users. Users of the 2 to 20 GHz spectrum may have some concerns and these should be addressed, but if G-line technology or a later refinement of it is being used, as appears likely, there should be little radiation from the power lines.

I wouldn't venture a guess off the top of my head how many symbols there are, but I'm not suggesting hundreds of questions on the test devoted to this. Ten or 15 questions in the pool, with maybe a couple actually in any given exam. Would that be too much for you to memorize ..... er, I mean learn?

At worst......

So we operate class one while operating 50 watts. Another bump.

All this is not insurmountable, but far reaching.

Not at all! If nothing else, economic development of that area will
help stabilize their political situation.

But we must dispel ourselves of the idea that there's a quick, cheap
and easy fix.

And you might want to look up just how much oil the USA imports from
the Middle East. It's not as much as many people think.

>
> And the Arabs do?

More so than you might imagine ;-)

Point is, Russian oil isn't a quick, cheap and easy fix.
>
> > > Besides...Russians and Americans are closer in social and

> I trust them more. I never did foresee a nuclear war between us.

I always thought that the biggest danger was that a war would start by
mistake rather than intent.

That doesn't mean the Soviets never wanted to take over, just that
they never wanted to take over a burnt out radioactive cinder of a
world.

> The true threat has been from some upstart trying to be the new kid
> on the block or someone looking to drive a wedge between us and the
> Russians.

Or somebody who didn't really care if they or their society survived
or not.
>

>
> I'd agree with that, but getting the rest of America to is a
> problem.

Exactly!

The solutions are always on the supply side, as if demand is sacred.
Heaven forbid anyone say that putting 25,000 miles per year on a
vehicle that gets 15 MPG isn't an inalienable right.

> We've had the technology to exploit many non-petroleum or
> hybrid petroleum alternatives for decades.

In 1980 I bought a car that got over 40 mpg in the city and over 50
mpg on the road. And it weighed 2200+ pounds, met all the pollution
and safety requirements and was fun to drive. No ignition noise,
either. Of course it was small, but it was big enough for
six-foot-three-inch me and lots of stuff besides.

But cars like that aren't what Americans are told to want, so most of
them don't. They're not "babe magnets".

And if someone suggests that there may be better ways to travel than
4000 pound 250+ HP private cars, and jet airplanes, they're called
"socialists" and "tree huggers"....

> And even where there are
> other US-controlled petro reserves, we ahve our own people fighting
> our attempts to recover them.

Think about why. Does the name Exxon Valdez ring a bell? "What do we
do with a drunken sailor....."

Also check put how much oil those reserves would actually supply if
fully developed. And how much it costs...

And remember that one point of the philosophy is to preserve *our*
reserves...

Also recall what event sparked the Japanese attack on Pearl Harbor. It
was FDR's decision to effectively stop the sales of oil, steel and
other strategic materials to Japan in response to their war of
aggression in China. Most important of these to Japan was the the

supply of oil, because without it their war machine would not be able to function for long. So they decided to attack and hopefully win a quick war that would secure for them a secure source of oil in Southeast Asia and the surrounding areas. Yet they missed a key target in their attack planning: they never attacked the tank farm above Pearl Harbor. And in the end they found themselves short of oil because American submarines and aircraft were sinking their tankers faster than they could be replaced.

Then there's Ploesti.....

In the end, I say we need to focus on being self-sufficient for basic necessities - and *all* of the changes needed to bring that about. Energy supply is a basic necessity for an industrial society.

Just like the old Novices when their licenses ran out.

Point is, that hypothetical Class B had a window of 8 *years* to
upgrade to Class A. You said it took you all of a week to get ready
for Extra.

Most clubs don't.

And if the power levels were restructured, the points from a 50 watt
station could make more difference than those from a 1500 W station.

> I'm taking my reference of "Class B Ghetto" from
> experience with the GOTA station. The first year our GOTA station
> operated, many of the people operating it called it a "toy station".

That's *their* problem.

> They could op one of the high power stations, park on a frequency, and

> wasn't until I put PSK31 on the GOTA station that it took off.

So? They're used to being Big Guns. Anybody who wants to be a Big Gun
could just get a Class A and be done with it.
>
> note: I'm not suggesting that newbies use high power. Just the opposite
> in fact. Hunt and pounce at low power builds competence in the new ham.
> But its so hard to compete with power when you're working like crazy to
> get a QSO, and the guy in the next tent is racking them up at a high rate.

That's part of the experience requirement. Part of the plan.

And remember the power multiplier idea. If the 50 watt station is
hunt/pecking 20 per hour but has a 3.5 multiplier, they're making more
points than the Big Gun doing 60 per hour.

> >>We have hams what operate now at field
> >>day that would suddenly have to have a control op (therefore taking

> operating myself.

If they're existing hams (say, Generals) they could still do what
they've always done. If they're unlicensed, or not licensed for the
freq/power/mode in use, they still need a control op today.

And one of the *best* ways for them to learn is to work with an
experienced op.

> >>Of course the second class

So does any other proposal. FD is once a year. It's supposed to be a
learning experience, last time I checked.

> It starts out prety simply, but then we have
> to do all kinds of things to shoehorn it into the real world. So we end

Then what's *your* solution, Mike?

I don't agree with all of Hans' ideas, but at least he's put forth a
coherent proposal.

I'd have three license classes, all renewable, minimum 1 year in each
class experience required, power levels 100W, 400W, 1500W,
subbands-by-license-class on HF/MF, and better writtens.

Granted, I had a head start, and didn't need as much time as some, but
I find it hard to argue that 10 years is a good time limit when it isn't
needed. Anyone that takes ten years to upgrade to Extra is probably not
going to upgrade to Extra. Ooops, class A.

>>>>I keep drawing parallels between the second class license and Generals.

Sigh... our club has a group of guys and gals that make a big
production out of FD. It isn't what everyone does, but its what we do.
We don't want to run 50 watts. The first year I went to field day, I was
a Technician. I got to run a high power station with a control op
logging. It was great, and was what really got me interested in getting
my General. then I logged while he opped.

Then next year, when I had my General, I could op by myself,
discovering the joy of overnight operation.

My points are two. We worked in this rank beginner from a technician
up, and didn't interfere with the station operation, and it worked well.
No adjustments needed. And I was part of the group from the git-go.

>>>As long as the power level is less than 50 W, that Class B ham could operate

Another "if-then" situation. Gaw, were getting a lot of them.

And it becomes *our* problem then. Since then, I have worked hard to
make the GOTA operators feel like part of the group. move that tent
nearer the big tent. Keep more people than just myself and the person at
the mic there. I'm a little surprised, Jim. All that I'm talking about
is making these potential hams and inactive hams feel like maybe we
want them there. Your arguments sound a little like some of the old
cranks I hear once in a while.

We were 3A

W3YA + W3GA (GOTA) did 7362 points - I don't have the breakdown for each
transmitter. We don't get any power multiplier at all, so what you see
is what we get.

>>Inexperienced users can get working

I gave mine a while back, and I'll give it again.

Technician

General

Extra

Same rules as now. Tests expanded for General and Extra.

Minimum impact, and there ya go. Question pool change.

> I'd have three license classes, all renewable, minimum 1 year in each
> class experience required, power levels 100W, 400W, 1500W,
> subbands-by-license-class on HF/MF, and better writtens.

And I'm still a little surprised, Jim. Perhaps I shouldn't point out
any problems that will happen under Hans' proposal? I get the impression
from your answers - "so what" "that's their problem" "Uh Huh" and the
like, that you must think my objections are as Hans describes me
sometimes - "novel".

What the heck? Perhaps it's better if I just keep the old yap shut? Anytime things are changed, things are impacted. We can point them out before hand, or run into them blind.

You might not think my concerns are valid, but I can tell you that I know plenty of people that have the same concerns. We are all novel I guess! 8^) Maybe I point out small facts - but I've pointed out a pretty fair number of them, and I'm not looking very hard. Any small fact is insignificant by itself, but when a lot of them come up.....

Maybe not!

If Hans' "no expiration date" Class A is adopted by FCC, they *won't*
give away your call sign unless somebody proves to FCC that you're
really, truly, stone cold dead. Probably require a close family member
to send in the papers - and if you've left instructions not to, your
survivors could keep your call out of circulation for a long time.

Aren't GROLs issued "for life"? If so, there's your precedent for a
non-expiring FCC license.....

ALRIGHT!!!!!! You **CAN** take it with you! Hey, I like my plan more and
more all the time.

Sunuvagun, I bet Dwight is gonna really spin up his rotors when he thinks
about this.

Never thought about that. What happens to my GROL when I become a SK? How would they know?

That is the handy work of the likes of NCI, ARRL, and W5YI. The new test is a joke.
This is also why I e-mailed the ARRL VEC and told him to remove me from the VE list.

It's truly a sad thing to see a great hobby like Amateur Radio degraded to what it is today. :'-(

I have a proposal of my own. Here it is.

All General and above become Class As, everyone else becomes a Class B. Class As get all privileges. Class Bs get 80, 40, 15, 10 and everything above that, i.e. everything any one of the equivalent licence classes had before but whole bands, not just subbands. Only Class As could be VEs, and I would limit Class Bs to 200W, i.e. Novice power level. No other limits, restrictions, etc. of any kind.

The only losers would be Techs who could no longer run 1500W. I suspect that few do, and that those who do would have no difficulty passing a Class A test.

I think that this has the virtue of being more politically acceptable than Hans' version.

A GROL has no expiration date and the serial number is never
reissued anyhow. Your ghost/incarnation/whatever will retain the
operating privileges. It may do a better job of operating than
several allegedly "live" commercial operators that I have run
across.

Take note that that is the situation here in Canada.

When things were restructured back in 1990, not only was the code
test separated out, but the written test became simpler. And
that test did not allow for the building of transmitters. You had
to take the advanced test to do that.

I have no idea if that idea came from hams or the DOC. Certainly
there was the suggestion that since few were building, the test
did not need to deal too much with technical stuff. Of course,
the simpler test, and more important the rule that outright bans
a homemade transmitter's use with that Basic license, institutionalizes
the concept that it's a hobby of communication, not technical matters.

When I was licensed in 1972, it was still called the "Amateur Experimental Service" here in Canada.

Eeek! Your proposal almost makes it if we were to adoopt a systems such as what Hans proposes. But I don't think those Technicians would like losing their licenses after ten years - if they didn't upgrade, of course.

Personally, I am a big proponent of new/expanded mass transit. I
DON'T believe the oil reserves are "unlimited". That's rediculous.
So it's time to build the infrastructure while the opportunity is
ripe.

It amazes me that we pushed ourselves to the Moon in only 9 years
yet we've really done nothing more in space technology than what
existed 25 years ago.

Of course if we found some sort of massive mineral reserves on
the Moon, the commercial sector would have us buying real estate there
in half that.

No, smart aleck. As I said in the last message, which you edited out of your quote, the Technician question pool I studied (July 97 ~ June 01 pool) covered simple block diagrams, symbols, and schematics. I suspect the current question pool does too. So perhaps you should make an effort to actually see what is on the current pools and exams before talking about what you want to see added. If you did so, perhaps you wouldn't be blathering about adding what is already there. Or is all that too much for you to understand?

I don't think any way is cheap or easy, Jim. It's jsut a matter
of idealogy...I'd rather my money went to Russians than to people who
think it's OK to treat women like property and use children as "human
shields".

> And you might want to look up just how much oil the USA imports from
> the Middle East. It's not as much as many people think.

It's got to be enough to keep OPEC rich, though...I don't see too
many soup lines in Saudi Arabia.

> More so than you might imagine ;-)

I've been over there before, Jim...Back when Soddom...I meant
Saddam... was our "friend". I didn't like them as friends, so I can
only imagine what it's like for the guys over there now.

> Point is, Russian oil isn't a quick, cheap and easy fix.

The Russians wouldn't nuke us cuz they'd want to occupy us
afterwards. The Rags will nuke us because Allah said to, and be happy
to do it, consequences be damned.

> > The true threat has been from some upstart trying to be the new kid
> > on the block or someone looking to drive a wedge between us and the

That seven virgins thing sounds pretty good to enough of them, it
seems...I can only accept that they will continue thier current path
unless we find a way to derail them. Nuking them is out of the
question and biological weapons can't be controlled. I say we cut off
thier money and let them go back to using camels for transportation
instead of physical gratification.

Damn. I'd rather a majority of "our money" (it's really the government's)
go right here...in the United States...to rebuild and repair our
infrastructure, to all education levels, to assist in the social and civil
disasters that are taking place right here within the boundaries of our 50
states. : |

We don't really know what the effects of a nonrenewable license would be today, because it's been so long since such a thing existed.

>Anyone that takes ten years to upgrade to Extra is probably not
>going to upgrade to Extra. Ooops, class A.

We don't know that for sure either, because for so long it's been a "round tuit" thing. No deadline, no pressure, upgrade when you feel like it. Changing to an "up or out" system would set up a very different environment. Maybe better, maybe worse.

>>>>>I keep drawing parallels between the second class license and Generals.

OK, fine. You want to protect the way things are because they permit your club
to do what it does. Nothing wrong with wanting to keep it that way!

>The first year I went to field day, I was
>a Technician. I got to run a high power station with a control op

Sure! And all that Hans' proposal would do is require another year of
in-training status with a control op. That's a downside of *any* experience
requirement.

>> station could make more difference than those from a 1500 W station.
>
> Another "if-then" situation. Gaw, were getting a lot of them.

All I'm saying is that the rules (both FCC and FD) can change. In fact, I think
the FD rule of "all QSOs count at the power level of the highest power rig"
should definitely be changed because it homogenizes the FD experience too much.

>
>>>I'm taking my reference of "Class B Ghetto" from

> And it becomes *our* problem then.

I mean that the folks who call it a "toy" station have a problem.

>Since then, I have worked hard to
>make the GOTA operators feel like part of the group. move that tent
>nearer the big tent. Keep more people than just myself and the person at
>the mic there.

All good stuff.

If nothing else, points is points, no matter how ya make 'em.

One of my tricks for many years was to bring along a WW2 surplus ARC-5 receiver and dynamotor, plus a hank of wire. A few minutes before 10 AM, while everyone was either setting up or sidewalk superintending, I'd toss the wire in a tree and hook the dynamotor to my car's battery. Tune in W1AW and copy the special FD bulletin (CW, of course) for 100 bonus points - the first 100 points of the club score.

Just the looks on people's faces were worth it.

>I'm a little surprised, Jim. All that I'm talking about
>is making these potential hams and inactive hams feel like maybe we
>*want* them there.

And that's a good thing! I'm all for it!

> Your arguments sound a little like some of the old

>is what we get.

Not exactly. Your setup made 4696 QSOs (!!). CW and digital modes are worth 2 points, and there were bonuses for independence of mains and other things I'm sure your setup had. And the GOTA station didn't add to your class of operation.

7362 points with three transmitters works out to 2454 points per transmitter. If we count the GOTA station as, say "half a transmitter", that drops to 2104 points per transmitter.

On that same weekend, I operated 1B-1 battery/QRP and made 2480 points.

>>>Inexperienced users can get working

But that was 35+ years ago and times have changed. I'd bet the
FCC won't do that again and has, to a certain degree already
shown its mindset with the lack of differentiation
between tech and tech+...even though there is a difference
in operating bands permmitted.

> Then some dump huck social-engineering gummint dudes, cheered on by a

4057. Expirations in 2004

Newsgroup: rec.radio.amateur.policy
Date: 2003-12-10 14:15:43 UTC
From: Bill Sohl <billsohl@mindspring.com>
Message-ID: <jUFBb.8762$7p2.1663@newsread2.news.atl.earthlink.net>
Source record: 83683

The calendar year 2004 has a considerable
amount of expirations...well above a normal
distribution which would have been about 1/10th
of existing hams...or about 63K.

The actual future expiratons data from the Joe
Speroni web site is over 84K expirations
with two months showing very high numbers...
almost 11K in May and over 17K in July.

Will be interesting to watch the renewal results.

Cheers,
Bill K2UNK

So would I, Kim. Plus a balanced budget.

But it's easy to say that. The hard part is deciding how much you're willing to give up to make it happen. By "give up", I mean things like higher taxes, higher prices on many things, lifestyle changes, a redeining of the USA's role in world politics, etc.

For example, would you be willing to pay the same prices for fuel that Western Europeans do? Much of the difference is taxes, not production cost. That's why so many Western European countries have such good roads, trains and transit systems - because much of the fuel tax goes to support clean, efficient public transportation.

I seem to recall seeing a notice on either the RAC's or IC's websites that they would be removing the code requirement for anything lower than 6m. Do you know anything about that? It almost seems like a priviledge to get onto the low frequency bands with the 5wpm requirements.

On another note, do you know of any good morse resources? I'd like to learn Morse (I got my license in 1999 and didn't take the morse test).

As far as the test goes, I took Electronics Engineering Technology in college and I thought the advanced exam was quite easy, but I may be biased.

Didn't FCC change the vanity call rules right about then? If so, it would explain the spike because getting a vanity call causes an automatic renewal regardless of the 90 day rule (so FCC doesn't have to pro-rate the fee, IIUC)
>
> Will be interesting to watch the renewal results.

Yep!

Further clouded by the 90 days before/2 years after rules. If someone is a little late renewing, they show up as an expiration.

I do like the ARRL. Do I agree with everything they do? Nope. I don't agree with everything everyone does.

Expensive? A bit, but only for those that think they are just taking out a magazine subscription.

Love their website, I've mined enough out of that to justify the membership dues.

And the alternitive is?

I *am* a member of ARRL, but do find the membership a little
steep... I'd go $25,, but will think long and hard about renewing at
$40.

I think a lot of the long gray vanity call lists of DX and contest
results should be moved out of QST and onto some sub menu web page where
the three people who give a damn could look them up. QST is a pretty
good rag; it can still be improved.

I object to ARRL's position that we should not be discussing sex,
politics or religion on the bands...what else is left worth talking
about? BUT I wish ARRL or *someone* could act effectively to make
these discussions a bit more civil.

I don't think ARRL is doing enough of the "right stuff" to attract
newcomers, particularly youngsters, to the hobby. Often the emphasis is
too much on technolgy and equipment and not enough on the social
exploration that's possible with our radios.

On positive side I think ARRL is still doing a pretty decent job
representing our interests to the Beltway Bandits.

11M was sparsely used because it was not harmonically related to the other HF bands (i.e., required a separate VFO band and couldn't be multiplied to other HF bands). With today's synthesized radios, 11M would be no more difficult to implement than any other band.

When the hams had 11M, they could also legally full duplex 10M and 11M simultaneously for a real 2X conversation like the telephone.

And yes, I was on the 11M ham band in those days.

You must have been distracted by a passing bimbo or something, but DXCC listings were removed from QST several years ago and moved to the DXCC Annual Report which goes only to DXCC participants.

The contest result listings similarly have been removed from QST and now can be accessed on the web.

I got one from Dwight also. Thanks a lot. And a Merry Christmas back to
you.

Wonder if he checked with the PC Police ??

Yea Dan thats what im wondering. I cant believe the PC Police would approve such a thing. May its a attempt by NCI and all the No-Coders to try and switch us to there side.
Who knows Dan, maybe Andy is in on this. Anyway check your mail box close Dan, who knows what they are up to.
On second thought Dan, maybe TIT will send us a Photo on her Card.

Jim:

Most EU countries are much better suited for mass transit (meaning light rail systems) than is the U.S. as a whole. Sure, they're good in big cities, but the
USA has too many wide open spaces and too much suburban sprawl -- making long commutes necessary for the majority of the workforce. This means we're going to be dependent on personal, self-driven vehicles for a long time to come. Moreover, I don't think that adapting our public transit systems to be as accessible and accommodating to the majority of commuters as those in the EU would cost far more than they are spending. Remember, they had a headstart on their transit systems, dating back to the pre-war era. They also have a higher level of cultural acceptence of mass transit -- many EU families have never owned an automobile, simply because there was no need (not to mention the prohibitive cost).

The long distances which must be travelled by most Americans to get to work and go about their daily duties would make EU-style gasoline prices impossible for the average person to afford. Our economy depends on cheap, abundant energy, available at present-day market rates (or lower) basically in perpetuity. The liberal, socialist Democrats think we need to change that and have EU-type energy prices, but they hate this country anyway, and want us to be subjugated to the EU. These treasonous wackos won't be happy until we revert to a totally agrarian society. They are the enemies of the freedom that America stands for, and must be treated as such.

Europe will always be different from the U.S., and considering their geopolitical realities, it is just the way it should be. However, since most of the EU nations would fit inside a couple of our states, America must be different. We must consume a larger share of the world's energy simply because we have a lot further to go in order to make our own individual social and economic contributions. I agree that mass transit should be exploited to the greatest extent possible, but it will never replace the need for individual, personal mobility -- meaning the private automobile, in all of it's forms.

Me too. I hope that Hillary was in Afganistan and Iraq, she talked to some of
the men, women, and children who were tortured and had family members brutally
murdered by the Taliban and the Fedayeen. Not that I expect that it would
actually change her mind about anything, such as supporting her President in
his war against terrorism. That is something that I would expect from a Loyal
and Patriotic American -- not Hillary.

For a member, you don't pay much attention. It has been over a year
since the contest results moved to the web. The Section News in the
back of the mag was also moved. I gave a damn about them. I was kind
of hoping the stuff you find interesting would be moved to the web.

Again you are not reading what I wrote. I stated that I avoided forming opinions about whether I would like something without experiencing it. I did not say that I avoided making decisions.

For example, I got a driver's license not because I wanted to drive but because in the area that I lived it was necessary. Mass transit was not an option. I continue to drive because of the convenience of it even though I now live in an area that does have mass transit.. However I absolutely HATE driving. The benefits of driving exceed my dislike of driving.

Since I am not independently wealthy, I have to work and therefore must select a job regardless of whether I can "try it" or not. One weighs the interview results, the benefits, the location, etc and make a selection and then makes a selection on the available data. Sometimes you get one you end up liking and other times you get one that keeps you inspired to make sure your resume is up to date and in circulation.

You know what? I am not so sure that it would take all that much, Jim. I am not even going to pretend to be a financier, but I wonder how much of the Federal Budget, i.e. your and my tax dollars, get spent away from our country. Then, how much foreign debt is "forgiven" each year? It goes on, I was thinking about this on the way to work this morning: oh yeah, not-so-smart subsidies, grants, etc. Salaries on superfluous government personnel *and* programs. I mean, a real mowing down of all the debt that is incurred each year, against what really, really needs to be spent. Pretty quick, and I doubt your dipping into peoples' pockets much at all...really.

But, if it meant a) one tax for all--no tax breaks for any, at about 10-14% per person and entity, b) taxing even religious institutions--anything outside of actual *church* and parish properties, c) cutting the fat from the equation, both in terms of programs and personnel; and there was still a need for higher taxes, I'd be willing to pay my *fair* share.

I don't lilke the ARRL, because QST does not print
any articles on Freebanding. Freebanding IS more popular
than ham radio, and we represent almost 15 million new
potential ARRL members. Too bad the ARRL Yankees
can't figure this out.

The average person is already paying nearly half their income in taxes if
you include all taxes plus the ones you pay indirectly. This is hardly
reasonable nor would it be reasonable for anyone to pay even more.

The U.S. does need to develope better mass transit in large
metropolitian areas. When I lived in the Dallas/Ft. Worth, Texas area,
the two cities were always complaining about the heavy commute traffic
and how they were not using the available mass transit system. The would
encourage people to car pool or use what mass transit was available, all
the while they were expanding the freeway system to accomodate more

vehicles. If you want people to use mass transit you have to 1) build a good mass transit system, and 2) don't build massive freeway systems that make it easier for people to drive their vehicles to work than ride mass transit.

I tried to send cards to everyone I've talked to here recently (23 of you in all). However, I'm sure I missed a few. To those I did miss, including those just passing through, let me also wish you an early, but earnest, happy Christmas and new year. The same to those who celebrate Hanukkah, or other celebrations, this holiday season.

I think this is going to be a good Christmas for me - not because of what I'm getting, but because I feel like that will be true. And I'm very much looking forward to a new year filled with new experiences - even the new twists on the old discussions in this newsgroup.

Anyway, with that out of the way, let's get back to those discussions. We have a few more days to argue before Christmas (Hanukkah or whatever) actually gets here.

I would wager we could cut the foreigh aid we send to support those
little pissant dictators in some of those pissant countries and have
more than enough to provide good health care for every citizen.

Actually, I did read what you wrote, Dee. And, since we all try to look into a subject before forming opinions, and then make decisions based on those opinions, the only difference between our two views is the matter of degree. Unlike you, I don't believe one has to personally experience everything before forming an opinion about it. In fact, I don't think it is even possible.

Regardless, when it comes to code, I suspect most newcomers to ham radio today are a lot like me when I first started - listened to code on the radio, tried a few code training programs, maybe played around with code translation software, and so on, before even beginning to study for that first license exam. While that alone is certainly not enough to make them an expert on code, it is enough to allow them to start forming opinions about it.

No-code started in '92. I would expect a bump in renewals falling due from last year onwards.

I think you should build the freeways, but mass transit should be developped much more as well. I used to commute 23 miles each way into London by train. I am now 27 miles by road from downtown Washington DC, but I am 15 miles from the nearest station!!

As long as I have to drive half way there to get to the station I'm going to drive all the way there. A system where the trains only run about 15 miles out from the middle of downtown is basically hopelessly crippled by European standards, and doesn't really count as 'available' to most people.

When most of the commuters live way, way beyond the end of the line it can never live up to it's potential. Sure, we are more spread out in America, but all that should mean is that I may have to drive across town to the station. It should never mean that I have to drive to another town 15 miles away to catch a commuter train, but that's how it is now, and needless to say, I don't do it.

What's more interesting is the count of those whose licenses expire WITHOUT them
also having expired (i.e. those who DON'T renew, as opposed to those who can't).

Wrong. Try getting your facts straight:

Testing change: 2/14/1991. First no-code license issued 4/12/1991.

Foreign aid goes a long way toward having those countries vote in the U.N. in line with our policies. Some of it puts military officers from third world countries through *our* military academies. It gives those officers a chance to live in the U.S. and see how our system works. Some of the aid brings scholars to the U.S. to study. If we build a needed flood control dam in Sierra Leone, good will toward the United States is generated. A decade or so back, Botswana actually weaned itself from U.S. aid and thanked us.

Why would paying for your doctor visits and your medications be the government's responsibility?

I tired mass transit when I first started working downtown. Nothing
convenient, friendly, safe, or good about it at all. It was scarey because
of the drivers, inconvenient because I had to work my schedule around
theirs, unfriendly people getting on and off knocking others with their
asses or briefcases, and I'll never do it again.

Sir, if you are so interested in having a magazine dedicated to the free banding people why don't you start one. With 15 million, seems that you would end up as a financial wizard.

The ARRL isn't going to print anything about free banding when they operate on frequencies they are not permitted. "Licensing" is the name of the game. "Legal" operation is the name of the game. Maybe you should go back to printing a "CB" magazine, something like there was back in the 60's-70's.

Yeah, money always has been very easy to throw around, 'specially when it's
someone else's. There's other ways to win friends and influence people--and
ways that would mean a lot more and build better alliances in the longrun.

>

Uh, because *we live* in this country? So, you disagree with programs that
improve our infrastructure that is pitiful, helps our kids and elderly with
healthcare and even education, begins an effort to ending welfare for the
capable, improves health conditions nationwide--and more, while our
government is off in other lands playing Godfather?! Figures, Dave.

The people of this country who are being taxed to the hilt are paying for
the backbone of crap in this country and the rest of the world. It's time
the rest of the world and the nitwits in this country get pushed out of the
nest. But, of course that ain't happenin' any time soon.

I neither approve of or disapprove of the ARRL.

Yes, the dews are high. If they where lower they could attract more potential members. With the majority of hams being senior citizens, the ARRL needs to take that into consideration when it comes to dews. WE all know that seniors are on a fixed income. Members should be given a choice of what magazine they would like when joining the ARRL.

I showed a copy of QST to a new ham friend and ash him if he was interested. His comment after looking over the magazine was: The magazine is to technical for him and most likely other new hams, the cost for membership is to high.

For me, the ARRL reminds me of the Federal Government. We elect the officials who are supposed to be working for the membership, but they do as they darn well please once they are in office. Who is in bed with whom.

I dropped my membership for the reasons I have stated above.

I see, December '91 instead of some time in '92. Not exactly a huge error,
is it? The first batch were all people who had taken the theory tests at
Anne Arundel ARC before no-code licences were actually introduced, and so
were ready to go when it came in. I think you may find that those six
people had the only no-code licences issued in the US in '91!

FWIW I agree 100% with you, Kim. Paying for health care and mass transit would be far more worthwhile than most of the things the government does with tax revenue. Their priorities are completely backwards.

Hardly! The first ones were issued in April of 91, and they issued somewhat
more than 6 Tech license in the next 8 months.

We can't fix the wide open spaces, but we *can* do something about
suburban sprawl.

The transportation situations in the USA and Europe are the way they
are today because of choices made by *people*. Where and how to live,
work and vacation/recreate, what sort of house and car to buy, what
politicians to elect, etc. etc.

> This means we're
> going to be dependent on personal, self-driven vehicles for a long time to
> come.

And the time to start changing that is now. Doesn't mean we have to
give up our cars, just that we can develop and implement alternatives.

> Moreover, I don't think that adapting our public transit systems to be
> as accessible and accommodating to the majority of commuters as those in the > EU would
cost far more than they are spending.

Most transit systems in the USA struggle to continue operations. A lot
of that is due to factors like precarious funding.

> Remember, they had a headstart on
> their transit systems, dating back to the pre-war era.

You have to be kidding!

The USA had extensive mass transit long before WW1. Much of it was
removed and *destroyed* after WW2 in the USA. In EU, much of it was
destroyed in WW2 and rebuilt afterwards.

It's all about choices.

> They also have a higher
> level of cultural acceptence of mass transit -- many EU families have never
> owned an automobile, simply because there was no need (not to mention the
> prohibitive cost).

The USA used to be like that, in many places. I grew up in suburban
Philadelphia, and most families had only one car. And we kids did not
need auto transportation to do everything a kid usually does.
School, sports, church, running errands for Mom and Dad, visiting
friends, the library, etc. - none of that required auto transport.
Most of it didn't even require a bike.

And for some pocket change, we could go almost anywhere in the city or
surrounding suburbs.

> The long distances which must be travelled by most Americans to get to work and
> go about their daily duties would make EU-style gasoline prices impossible for
> the average person to afford.

Only if we insist on driving inefficient cars as much as we do now.

> Our economy depends on cheap, abundant energy,
> available at present-day market rates (or lower) basically in perpetuity.

That can and must be changed. It makes us too vulnerable. It's a
national security issue.

> The
> liberal, socialist Democrats think we need to change that and have EU-type
> energy prices, but they hate this country anyway, and want us to be subjugated
> to the EU.

> These treasonous wackos won't be happy until we revert to a totally
> agrarian society. They are the enemies of the freedom that America stands
> for, and must be treated as such.

That's pure bullshit, Larry. Pure unadulterated bullshit. There's no
other word for it.

It's not about liberals or conservatives, Republicans or Democrats.
It's about sound engineering and planning for the future.

How much "freedom" is there in being at the economic mercy of foreign
governments deciding to reduce the production of oil, or jack up its
price artificially, as was done twice in the 1970s?

How much "treason" is there in saying that the USA should be as
self-reliant as possible so that we don't have to do business with
(and line the pockets of) anyone who doesn't support our principles of
freedom?

How "wacko" is it to realize that clean air and water aren't luxuries
but necessities - and that they cost less than the health problems
resulting from pollution?

> Europe will always be different from the U.S., and considering their
> geopolitical realities, it is just the way it should be. However, since most
> of the EU nations would fit inside a couple of our states, America must be
> different.

Of course!

I'm *not* saying we must give up our cars. Just reduce our dependence
on them, and increase their efficiency. It *can* be done, if we choose
to do it.

> We must consume a larger share of the world's energy simply
> because
> we have a lot further to go in order to make our own individual social and
> economic contributions.

Not true at all.

The key is *efficiency*.

Consider this:

Half a century ago, the New York Central's 20th Century Limited ran a
consistent 16 hour schedule from New York to Chicago. That's 961 miles
in 960 minutes, including engine change at Harmon, at least ten
station stops, bridges, curves, grades, etc. On jointed rail and
wooden ties with steam and first-generation diesel locomotives. 16
hours downtown to downtown, and the service was dependable and
comfortable.

That sort of travel was largely replaced by air travel, which only
takes about a two-hour flight. However, it takes at least an hour to
get to and from the airport, and with security you need to be at the
airport two hours before flight time, so the *real* travel time is
more like six hours, downtown to downtown.

The French TGV trains run at close to 200 mph in revenue service. (You
don't want to know how fast they have gone in tests). That sort of
technology could cut the NYC-Chicago time down to about six hours if
station stops were limited - and it's safer, pollutes less, and is
much more efficient than air travel or private autos. And it's less
affected by weather. Imagine the country linked by such a highspeed
system, with local transit to complete the journey.

And that's just one example of existing technology. Don't you think
Americans could improve on that?

The only problem is making the *choice* to do it.

> I agree that mass transit should be exploited to the
> greatest extent possible, but it will never replace the need for individual,

> personal mobility -- meaning the private automobile, in all of it's forms.

Nor does it need to!

Much of that is military spending.

Foreign aid constitutes about 1% of Federal spending.

>Then, how much foreign debt is "forgiven" each year?

Not much.
> >
> > I would wager we could cut the foreigh aid we send to support those

>
> At least the kids and our elderly.
>
You'd lose those bets.

Check out how much is spent on foreign aid vs. how much is spent on
Medicare alone.

And recall that a lot depends on how spending is categorized. For
example, are benefits paid to and for veterans and their families
"defense spending" or "human resources spending"? When the Army Corps
of Engineers restores critical infrastructure in Iraq or Afghanistan,
is that "foreign aid" or "defense spending"? How about when the
National Guard is called out in a domestic disaster like a flood?

The 800 pound budget gorillas are defense spending, Medicare and
Social Security. The rest is table scraps.

Not content to leave things alone. Glenn Baxter, K1MAN has threatened ANOTHER hostile takeover of a frequency.

Glenn is now claiming the Feds are jamming his 75 meter SSB blabcast. And is demanding everyone around his 'new chosen home' of 3977 to clear out.

Word is those that were told to clear out OR ELSE (more bogus afidavits eh Glenn?) told him to take a flying F*&& at a rolling donut.

And one more thing boys and girls, he and his Polish gentlemen are planning a hostile move to 14.275. This after being thrown off the frequency previously.

How the worm turns.

This from your humble reporter and ever observant listener.

A choice of magazines? Explain please.

Its a bureaucracy. And according to Doctor Peters, who wrote a book called
'Peters principle' many years ago:

"In a bureaucracy everyone will eventually arise to their level of
incompetence"

I think Jim has it correct. The existing
ham base is 683K, so an even distribution
of those license renewals over a 10 year
span would net 68K renewals per year...if
they were evenly distributed.

Where did your 50% number for the average person come from? Since revenues from all levels of government, as well as the nation's gross income, are well known, the average of all taxes isn't a difficult number to compute with some precision.

In fact the Tax Foundation (which should be called the Anti-Tax Foundation, their interests would never lead them to underestimate this number) does exactly this to calculate their "Tax Freedom Day", seen at

http://www.taxfoundation.org/taxfreedomday.html

Tax freedom day this year was April 19, meaning the average total tax burden was 30%. Note that the tax burden for the median wage earner was probably somewhat less than this since higher tax rates on corporate income and the wealthy tend to skew the average higher (see the "Q&A about critiques..." link on the same page).

I hence can't see how you concluded that the average American's total tax burden is anywhere near 50% of their income. I also recently saw (but have since lost) a table which showed comparative tax burdens for 36 industrialized nations. Only the northern-most European countries have total tax burdens in the 50% ballpark, while US taxes in 2003 were 35th on the list, with only Mexico lower (in 2000, Japan and Korea were also lower). Not that this suggests the US is in any way under-taxed; if you add in the additional 12% of income spent on private medical care you end up within a few percent, plus or minus, of the tax burdens in Canada and (south-)Western European countries which fund medical care via taxes.

I don't know how you define what is "reasonable" for someone to pay, and I certainly wish I paid less tax rather than more, but it is the case that you get about what you pay for. For an example of an industrialized country with significantly lower taxes one can look to, say, China, and observe that to get this tax rate one would also need to live with China-like infrastructure and services. This isn't a tradeoff I'd recommend, personally.

You would lose that wager big time. The total US foreign aid budget
for 2001 (the last year I can find) was $15 billion, half of which went
to Isreal and some of its Arab neighbors. The total spending on health
care in the US in 2001 was $1.4 trillion, about 100 times the amount.

I don't know where the myth that the US spends a huge amount on foreign
aid came from. As a fraction of GDP the US foreign aid budget is the
stingiest among developed countries, and the money is usually spent on
things which advance some US foreign policy interest. It is way, way
cheaper than sending the military somewhere to advance some US foreign
policy interest.

No, he meant the "The Peter Priciple", from the book by that title written
by Dr. Laurence J. Peter and Raymond Hull.

Peter Drucker had nothing to do with it.

Good luck on this one now!

Do you pay for all your doctor visits and medications, or does some insurance pay for a good portion of it? I suppose when you are eligible for Medicare you are going to refuse it, after all,it should not be the governments responsibility to pay for your medical, Right?

And it has no authority other than what it self subscribes. The FCC is the only authority that can issue licenses to use the radio spectrum in the U.S. and other countries have their own license structure. Alfa-Tango International has no authority to issue licenses for any use of the radio spectrum. It is just more "freeband" nonsense, and there is no "freeband" in the U.S. as those frequencies you use as a "freeband" are allocated to other services who have ligitimate licenses to use those frequencies. You ATI license isn't worth the paper it is written on and carries no authority whatsoever.

Social Security has only been separately accounted for since 1986. Before that payroll tax revenue and SS expenditures went to and from the general fund and so were indistiguishable from other taxes and expenditures, which is where the habit of lumping it all together came from. SS has been generating a surplus since Reagan raised the payroll tax (in 1983 or so) and separated out the accounting, and I think now SS owns over $3 trillion in US government debt.

This is with baby boomers still working, however. Since the separately accounted SS is essentially an insurance policy its financial health needs to be determined from actuarial tables, rather than from a simple current balance, since most SS liabilities are still in the future. The fact that SS was actuarily insolvent in the early 80's was why Reagan (back in the days when there was some adult attention paid to the country's fiscal state) cranked up the payroll tax to ensure that current surpluses sufficient to cover future liabilities were generated.

The only reason I point this out is that the current Congress generated a report a couple of years ago showing that SS would be unable to meet its obligations by, I think, 2014. The study reached this result by assuming the federal debt owed to SS would never be repaid, which suggests that the current government is again treating the payroll tax and SS payments as contributions to and expenditures from the general fund.

Thanks, I couldn't see a connection with Drucker!
So it is spelled "Priciple"? That would explain why I didn't find it!

This one?

About the Author
Before Dr. Laurence Peter's death in 1988, he was a professor of education at the University of Southern California and at the University of British Columbia.
Raymond Hull lives in British Columbia.

This best-selling business classic of more than twenty-five years' duration is a dead-on account of why boredom, bungling, and bad management are built into every organization. Through hilarious case histories and cartoons adapted from Punch, Dr. Peter shows how America's corporate career track drives employees relentlessly upward -- until they get promoted into jobs they just can't do and wind up desperately treading water, driving their colleagues crazy, and dragging down productivity and profit.

That "incompetence" is more usually a lack of sufficient office politics skills than
technical skills. "Dilbert" is on target more often than you would believe if you
never had to work for a large corporation. AT&T was the worst with this. There you worked on stuff not because there was a chance that it might make the
company any money, but because your boss thinks it will impress his boss. Other
instances are when your department didn't spend all its allocated budget for the
year, so the boss has people order equipment that might be useful in the future.
Known as "Use it or lose it", as next year's budget would likely be scaled back if
this year's isn't fully spent.

I have run across incompetent people in companies I've worked for, but it's actually quite rare. One guy who didn't know what he was doing just tried to
wing it. And his work was very faulty. But by far most incompetence is found in management.

can't).

Actually if you go to the FCC database and sort for expired licenses, those
that have lapsed but are in the grace period will not show up as expired.
So there is a two year lag between the actual expiration date and when they
are marked as expired in the database.

An out of date number from when I paid attention to it a few years ago. At the time "Tax Freedom Day" was sometime in May. So at that time it was almost 50%. European countries at the time were a higher percentage.

However it does not mean that the US is undertaxed but instead that Europeans are overtaxed.

Remember we all pay for our insurance. And don't say the company that employs you pays for it. That's a smokescreen. What they pay could just as well go into your paycheck so you could afford to pay for it yourself.

The government has taken every step possible to insure that we will NOT have the money to pay for our own insurance and our own health care. Instead they prefer that we depend on them to do it. That is potentially a bad situation as it depending on the government is risky. One can easily pay in all their lives and yet be severely limited on benefits eligibility. Investing in private benefits would allow one to have benefits commensurate with what they paid in.

There is no rule against controversial topics. However there is a recommendation that one use common sense and remember that on the air we should be ambassadors of good will. So it is considered inappropriate to discuss such subjects with a stranger, especially those in other countries, since you may inadvertently offend them.

On the other hand, discussing a controversial subject with someone you know well is reasonable.

Along similar lines, I tried the local version of mass transit. I had to wait 30 minutes for the bus, then undergo a very circuitous route, and still had to walk a quarter mile. Leaving work at 5:00, I got home a couple minutes after 7:00 p.m. 2 hours to go the 2.5 miles from work to home!!!!!

That's right. It's a conspiracy - designed to garner good-will for this side of the argument, with the ultimate goal of winning the propaganda war. You should have seen the cards I sent to each of the FCC employees.

Just kidding, of course. It was just my little attempt to spread some cheer. It certainly wasn't much, but it might just make someone feel good, even if only for a moment.

You better get at it, Larry. The holidays are coming up quickly. I love this time of year. There is perhaps nothing, in public, I enjoy more than sitting at the mall watching the people rushing around shopping from store to store. The looks on the childrens' faces is priceless.

Sorry to dissappoint you but I received my call when the Novice ticket
was only good for a year, you either upgraded or lost it. Upgraded to
General then to Advanced, took all but the Novice in front of an FCC
examiner. I have had the same call since, just dropped the N after
upgrading, it is a 1X3 K call and not one of those later
2X3's like you have.

Well Dan...you do know things can get very boring up there
in Maine, especially in the Winter! (those Maine Winter's
last *8 Months* out of the Year you know! Remember those
Best Western Inn travel guides they used to print? Ever take
a look at the photos of the Best Western Inn's they had listed
for ME? All the photos...every darn one of em...showed pics
of kids playing in swimming pools with green mountain backgrounds.
I mean, who the heck are they trying to fool with that photogeneric
bullshi+ ?) I guess this is what keeps the Boy Broadcaster
busy 8 months out of the year whilst he's holed-up and
snowed-in eh Dan..??

> Glenn is now claiming the Feds are jamming his 75 meter SSB blabcast.
And
> is demanding everyone around his 'new chosen home' of 3977 to clear out.
> Word is those that were told to clear out OR ELSE (more bogus afidavits
eh
> Glenn?) told him to take a flying F*&& at a rolling donut.

He says the FED's are jamming him now? Is MAN going back to "conspiracy
theories" mode? Let me guess...the IARN is now going to be the official ham
EBS station for the approach of Planet-X. Perhaps the triangle-shaped UFO's
are on their way to Belgrade Lakes? Get those tinfoil hats ready
gentlemen because the alien "Eric Cartman mind and anyl-probes"
are on their way! (You know Dan, if Glen had some brains, he'd get on
the phone ASAP with either George Noorey or Art Bell and ask to
be a guest on a future Coast to Coast AM Broadcast. I mean, he
could get all that free publicity on 500+ late night AM Radio stations
just like Wayne Green does.) If he's really lucky, he'll be on some night
right after Richard Hoagland of "The Face on Mars" fame is on and
be an instant hit on the top-20 C toC AM Kooks List.

Finally, as for "rolling donuts", I feel Glen should stay away from
any and all of the same. I seem to remember a photo of him from
Hosstraders appearing on Jon's website, and the ole boy really needs
to lose that spare *Hummer H2 tire* he's carryin around his waistline.....

> And one more thing boys and girls, he and his Polish gentlemen are
planning
> a hostile move to 14.275. This after being thrown off the frequency

I'm not old enough for medicare and it matters not whether insurance covers my visits or medications. Fact is: Government is not paying for my medical care nor do I feel that I have a right to government subsidized medical care. That said, care to answer my question?

It isn't "someone else's" money, Kim. It is government money obtained
from those Americans who pay taxes. The money is being spent in the
interest of the people of the U.S.

> There's other ways to win friends and influence people--and

Do you believe that is the purpose for bringing foreign students to the
U.S. for schooling?

That is quite often done. On other occasions, the money comes in the
form of a grant. The actual construction, by the way, is often done by
U.S. companies.

I think you're about the hugest piece of crap I've been witness to in a
long, long time, Dave Heil. You go back into your silver spoon 'gain,
now... Buh bye...get another book.

Didn't know the ARRL was into dew. They do however have dues. ;>)

Either way...why bother?
They ain't getting my money.

You have a No Code Tech License, which you just obtained. Prior to getting your No Code Tech, you operated CB for almost 40 years. Prove otherwise! What is your ham call?

You do not have an amateur radio call sign. You have operated on
CB for almost 40 years. Prove otherwise. What is your ham
radio call sign?
